DIMENSIONS: 19" W x 13½" D x 8-3/6" H
PRICE: $275.00 — RACK MOUNTED

MODEL G220-10

INPUT: 115VAC
OUTPUT: 220VDC @ 10A
RIPPLE: 48%
METERS: NONE
DIMENSIONS: 21" W x 15" D x 10" H
PRICE: $425.00
METERS $50.00 EXTRA

SILICON INDUSTRIAL POWER UNIT MODEL G30-40F

INPUT: 115 Volts AC, 60 cycles, single phase.
OUTPUT: 0-32 Volts DC, 0-40 Amperes DC, continuous duty
RIPPLE: 1% RMS
DIMENSIONS: 12¼"H x 19"W x 13"D
REGULATION: D.C.V. at full load: 32 minimum D.C.V. at 1/10 load: 35 maximum
PRICE: $425.00

SILICON AIRCRAFT BATTERY ELIMINATOR Model G30-200

INPUT: 220 Volts AC, 60 cycles, 3 phase
OUTPUT: 0-32 Volts DC, 0-200 amperes continuous duty also avail. 300A
RIPPLE .5% RMS
REGULATION: 5-8% 1/10th load to full load with constant input and maximum output voltage setting
METERS: 2% Accuracy
DIMENSIONS: 25" x 25" x 43"

SILICON REGULATED POWER SUPPLY Model G530-40M

INPUT: 115 Volts AC, 60 cycles, 1 phase
OUTPUT: 5-30 Volts DC, 0-40 amperes
RIPPLE: 1% RMS
REGULATION: ±1% from no load to full load
METERS: 2% Accuracy
DIMENSIONS: 21" x 15" 19"

MODEL GT20-200

INPUT: 220 VAC 60 cy. 1 Phase
OUTPUT: 0-22 VDC @ 200A
RIPPLE: 1%
CABINET: 35" x 20" x 20"
METERS: VOLT & AMP.
PRICE $625.00

SILICON GENERAL PURPOSE RECTIFIER MODEL G-115

INPUT: 115 Volts AC 60 cycles, 1 Phase
OUTPUT: 0-32 Volts DC, 0-50 Amperes DC, Continuous duty variable over entire range
RIPPLE: 1% RMS
DIMENSIONS: 22"H x 19"W x 15"D
PRICE: $522.00 NET

SILICON POWER RECTIFIER Model G50-50R

INPUT: 220 Volts AC, 60 cycles, phase
OUTPUT: 0-50 volts DC, 0-50 amperes continuous duty
RIPPLE: 3% RMS
REGULATION: No Load to Full Load
METERS: 2% Accuracy
DIMENSIONS: 21" x 15" x 19"

AIRCRAFT BATTERY ELIMINATOR MODEL G101F

INPUT: 115 Volts AC 60 cycles, single phase
OUTPUT: 0-32 Volts DC, 0-20 Amperes, continuous duty
RIPPLE: 0.5% RMS Unique overload device prevents needle slam and shows overload condition
REGULATION: D.C.V. at full load: 30 D.C.V. at 1/10 load: 35
METERS: 2% Accuracy
DIMENSIONS: 19" x 14¼" x 12¼"
PRICE: $302.50 NET
May be used for Rack or Bench

SILICON POWER RECTIFIER For transistor circuits electronic equipment MODEL G92F

INPUT: 115 volts AC 60 cycles, 1 phase
OUTPUT: 0-32 Volts DC, 0-10 Amperes D.C. continuous duty
REGULATION: No load to full load 15%
RIPPLE: Less than 0.3% RMS
METERS: 2% Accuracy
DIMENSIONS: 17" x 9" x 9"
PRICE: $169.50 NET
*Also available in 5 Amperes
PRICE: $114.50 NET

VARIABLE AC AND DC POWER SUPPLY

INPUT: 115 Volts AC, 60 HZ, 1 Phase
OUTPUT: (1) 0-22 Volts DC at 4 amperes. (2) 0-22 VAC at 4 amperes. (3) 0-350 Volts DC at 200 MA. All very low filtered.
DIMENSION: 17" x 9" x 9"
WEIGHT: 36 Lbs. Approx.

NOBRUSH® FREQUENCY CONVERTERS & GENERATORS

The heart of each "NoBrush" Frequency Converter is a "NoBrush" permanent magnet generator—a revolutionary development in its own right. The "NoBrush" permanent magnet generator features a cast aluminum rotor designed to give amazing voltage stability. It eliminates brushes, commutators, slip rings, resulting in absc minimum maintenance. Elimination of excita losses gives amazingly high efficiency, with sequent low heating. Other "NoBrush" advant are excellent wave form, and immunity to dan by repeated overload or short circuit.

FREQUENCY CONVERTER SERIES 30 UNIT SHELL DESIGN

FOR CONVERSION OF 60 TO 400 CYCLES

FEATURES:

Maximum Dependability
Cool Operation
Very Low Audible Noise
Extremely Low R.F. Noise (zero for most applications)
Compact Construction
Light Weight
High Overload Capacity
Minimum Maintenance
Withstands Short Circuit
Stable Output Voltage
Low Internal Impedance (favorable for pulse loads)
Operates in Adverse Environmen

The "NoBrush" Unit Shell Frequency Converter was developed in response to the demand for an efficient, compact, dependable quiet unit, for powering electronic and other high frequency equipment. A "NoBrush" generator is mounted with a high quality induction motor within a single shell. Oversize pre-lubricated ball bearings, sealed for life, insure long term maintenance-free operation. Magnetism is permanently "locked in" at a high level. Problems of radio interference, sparking, fouling, etc., have been eliminated. Because of its simple design and rugged construction, the unit withstands extremes of mechanical and electrical operating conditions, resulting in continuous long-life service.

FUNCTION. The Series 30 Converter is a highly compact generator set for conversion of 60 cycle to 400 cycle power. **CONST TION.** Generator and motor stators contained within aluminum unit shell. Generator and motor rotors pressed on unit shaft, wit bearings at ends of shaft. Two-bearing construction is utilized, wi any projecting shafts, couplings or belts. Single phase input model provided with starting capacitor and relay, easily accessible in a g ous-sized terminal box. **APPLICATION.** Wherever a dependable, tr free source of 400 cycle power within the range of 150 VA to 2.5 K required, where 60 cycles (and in some cases, 50 cycles) is availabl primary energy. **SPECIFIC APPLICATIONS.** As a source of high quency power for electronic apparatus; for test and research work the servicing of aircraft electrical equipment; for portable radio and tary electronic devices; for high frequency motors; for isolated p in computers.

SPECIFICATIONS: INPUT. Low-slip induction motors utilized for drive, available in single and three-phase models. Single phase units are reconnectable for 115 or 230 volts and are capacitor start, induction run. Three phase units normally supplied reconnectable for 208 or 220 or 440 volts. **DUTY.** Continuous. **MOTOR SPEED.** 3500 RPM for ratings up to ¾ KVA. 1750 RPM for ratings from 1 KVA to 2½ KVA. **BEARING TYPE.** Ball bearings, sealed, lubricated-for-life. **ACCESS.** In single phase models—to starting capacitor and relay by removal of external terminal box cover. **OUTPUT VOLTAGE STABILITY.** Within 1% for constant load and constant input frequency. **EFFECT OF INPUT VOLTAGE CHANGE ON OUTPUT VOLTAGE.** Output voltage will change less than 1% for input changes of plus or minus 10%, or for short period input disturbances as great as 30%. **OUTPUT FREQUENCY.** See Chart. **OUTPUT FREQUENCY STABILITY.** Within plus or minus ½% at constant load and constant input frequency. **TEMPERATURE RISE.** 40 degrees, C. (72 degrees F.) **R. F. NOISE.** Extremely low; may be considered zero for most applications. **EXCITATION.** Internal, permanent magnet. **REGULATION.** See typical curves. **DIRECTION OF ROTATION.** Operates equally well in clockwise or counterclockwise direction. **WAVE FORM.** No sharp peaks or spikes. Total harmonics, single or three phase, withi for ratings 1 KVA or over; 5%-8% for ratings un KVA, depending on model. Improved wave form on s order. **OPERATING POSITION.** May be operated shaft horizontal, vertical or at any angle. **COOLIN** internally mounted fan. **AUDIBLE NOISE.** Approxi ly 70 db. (Measurement on "B" scale, at 3 feet distance unit, in accordance with ASA Standard No. Z 24.7-1 **AVAILABLE VARIATIONS.** The following variation available on special order, in most cases at only a m addition in price. (Not all variations are available ratings.) • Re-lubricable bearings • Militarized cons tion • Other standard single or three phase input vol • 50 cycle input • Synchronous motor drive • Other put frequencies—180, 280, 360, 840 cycles • Other sta or non-standard output voltages • Reconnectable o windings for full power at either of two voltages • voltage taps • Auxiliary D.C. output at low or high age • Two phase output • Class "B" insulatio high ambient temperature operation • Carrying ha for easy portability • Screened openings for unfavo environments.

OTHER 400 CYCLE CONVERTERS & GENERATORS

NOBRUSH®

lush" machines employ permanent magnet excitation — the oldest principle in generator construction — applied th newest way. By modern principles of engineering design, performance and capabilities previously unheard of in tat g generators are made available — fitting the machine to applications where previously unsuitable. Outstanding va ages exist over other methods of power generation and frequency conversion. Quality has been tested repeatedly a ual military and industrial applications, under most exacting conditions that would have disabled machines o er types.

ALTERNATORS

The original, revolutionary, "No-Brush" generator. Permanent magnets yield stability, reproducibility, ruggedness and virtually zero R.F. noise. Available in large variety of ratings, frequencies and voltages. Supplementary windings with rectifiers available for D.C. output.

t. N	Rating KVA	Phase	Speed RPM	Height	Length	Width	Weight Lbs.

VERTICAL CONVERTER

A rugged 60-400 CPS frequency converter for power output ratings from 2.5 KVA to 10.0 KVA. High quality induction motor is close coupled to a famous "NoBrush" generator for a really outstanding unit. Sealed bearings and totally enclosed motor result in eatly minimized maintenance. Very compact, with high power wei t and size ratio. Available variations include 50 CPS input d er output frequencies.

Cat. o.	Rating KVA	Phase	Dimensions Diameter	Dimensions Height	Weight Lbs.
33-1	2.5	1	19.4"	16.1"	173
33-2	3.5	1	19.4"	16.1"	215
33-3	5.0	1	21.9"	18.1"	277
33-4	5.0	3	21.9"	18.1"	248
33-5	7.5	3	21.9"	18.1"	262
33-6	10.0	3	21.9"	18.8"	334
33-9	3.0	3	19.4"	16.1"	177

SYNC. DRIVEN CONVERTER

The ultimate in frequency converter quality. Drive from 1200 R.P.M. brushless synchronous motor. Direct mounted 40-pole "NoBrush" generator delivers stable, almost pure sine-wave voltage. Immune to voltage disturbances on input line. Militarized versions available. Ratings from 2.5 KVA to 10 KVA.

Cat. No.	Rating KVA	Phase	Length	Width	Height	Weight Lbs.
35-001	2.5	1	26"	22"	16½"	470
35-002	5	1	30"	22"	16½"	650
35-003	3	3	26"	22"	16½"	475
35-004	5	3	28"	22"	16½"	590
35-005	10	3	30"	22"	16½"	660

MOTOR GENERATOR SETS

"Nobrush" Motor-Generator Sets give maximum flexibility. Units use V-belt or timing belt coupling. Available with either synchronous or induction motor drive. Components rigidly mounted on rust-proofed steel base. For conversion of either 50 or 60 cycle power to 400 cycles.

3 PHASE INPUT AND 1 PHASE OUTPUT BELT DRIVEN

Cat. No.	Rating KVA	Overall Length	Base Length	Height	Width	Weight Lbs.

SOLID-STATE POWER CONVERSION EQUIPMENT...

FOR THE SPACE, MILITARY, AND INDUSTRIAL MA

REPRESENTATIVE POWER CONVERSION UNITS...

23076A

23067A features eight modular regulated outputs with line/load regulation as low as ±0.1%.

21459

21459 . . . plug-in unit provides remotely programmable regulated output with stability of 15 mv/8 hours.

23166A

23166A is ruggedized environmentally-immune unit with eight regulated outputs with electronic short protection.

23592 has five adjustable, regulated outputs in three plug-in modules. Features modular fault isolation connectors and test points.

23592

23577

23577 . . . for electronics fire control systems, has eight regulated outputs. Tight regulation under all environmental conditions.

GLENTRONICS, INC. has, since 1959, been a su to numerous space, military, and industrial progra designing, developing, and manufacturing transist power supplies and solid-state electronics equipn products that have earned the Company a solid r tion for high quality at reasonable cost.

GLENTRONICS engineers have consistently de and provided the most reliable and practical pow version equipment available to the industry. Pow plies designed and manufactured by GLENTR include numerous exclusive features — modu construction with multiple adjustable outputs having variable overcurrent and overvoltage prot extremely low-ripple output and long-term stabili tomized packaging; subminiaturization; and other design features for special customer r ments.

GLENTRONICS' reputation is built upon qualit mensurate with applicable requirements, perfor competitive pricing, and delivery on schedule. A record of achievement is exemplified by the mo 200 customer facilities served by GLENTRONIC

GLENTRONICS INC.

ALSO...

single or multi-output AC power supplies, with high efficiency and excellent regulation. DC-AC or AC-DC with customized options.

DC POWER

From 10μV to 4000V
From 1μA to 2000A
From $90 to $3,500
From manual to computer controlled.

how to select a Hewlett-Packard DC Power Supply for your application

DC Power Supplies — you might think of them in other terms. Such as battery substitutes, rectifiers, AC-DC converters, power amplifiers, operational amplifiers or maybe even as SCR's.

No matter what you call them, Hewlett-Packard offers more than 100 models of DC power supplies. These offer a wide range of voltages and currents, a sophisticated variety of control versatility and solid-state reliability. One of them may prove suitable for your application — whether it be for OEM use, a special system, the production table, or the research bench.

To this end, we offer the following guidelines for helping you select the right power supply. See the next three pages for a condensed listing of DC power supplies from Hewlett-Packard.

power supplies

Voltage Output: A power supply with a voltage rating about 10% higher than that required is recommended. This provides the necessary flexibility for testing and adjusting analytical and other systems.

Current Output: For optimum performance, the current rating of the selected power supply should equal or exceed the maximum instantaneous (not average) output demanded by the load. Built-in fast-acting protection circuits of Hewlett-Packard instruments limit the output current to a preselected value; this protects both the power supply and the load from damage.

Output Mode: Most hp power supplies are designed to provide either a constant voltage or a constant current output. However, many hp power supplies are designed to operate in either mode and to automatically switch (cross over) from one mode to the other at any preselected point in the output range. If flexibility in operating mode is desired, these versatile hp power supplies are recommended.

Specifications: Most applications will call for well regulated power supplies. These: fluctuate less than 0.01% for a maximum change in input AC line voltage or output load resistance. With no change in load or line conditions, a well regulated supply will drift less than 0.03% in eight hours and experience an output change of less than 0.01%/°C change in room temperature. Ripple and noise are functions of internal filtering and isolation; 200uv RMS is typical of well regulated hp supplies (for a 24V output, this is less than 10 parts per million). Performance specifications a factor of 10 times better are available from more precise units — while moderate regulation of .5 to .1% is typical of units with output ratings above 2 kW.

All Supplies: 50°C maximum ambient temperature rating. Floating output (ground either side), continuously vari low output impedance at all frequencies, 3-wire input, computer-quality electrolytics, 1 year warranty. No turn overshoot; short-circuit-proof, all semiconductor except as noted by‡.

Transistor Supplies: Glass-epoxy printed circuit board construction, fully automatic overload protection — short-cir

HP 1970 Electronics Catalog

. . . Includes guide lines for selection and specifications for over 100 power supplies.

DC Power Supply Handbook

. . . Includes power supply definitions, principles of operation, connection / operation, and performance measurements.

PROVEN RELIABILITY—

DC-DC, DC-AC, SOLID-STATE POWER INVERTERS

over 260,000 logged hours— voltage-regulated, frequency-controlled, for missile, telemeter, ground-support, 135°C all-silicon units available now—

Interelectronics all-silicon thyratron-like gating elements and cubic-grain toroidal magnetic components convert DC to any desired number of AC or DC outputs from 1 to 10,000 watts.

Ultra-reliable in operation (over 260,000 logged hours), no moving parts, unharmed by shorting output or reversing input polarity. High conversion efficiency (to 92%, including voltage regulation by Interelectronics patented reflex high-efficiency magnetic amplifier circuitry).

Wide input voltage range (1 to 250 volts DC). Wide input voltage regulation (output voltage maintained with variations up to 50% in input voltage).

Light weight (to 6 watts/oz.), compact (to 8 watts/cu. in.), low ripple (to 0.01 mv. p-p), excellent voltage regulation (to 0.1%), precise frequency control (to 0.2%) with Interelectronics extreme environment magnetostrictive standards or to 0.0001% with fork or piezoelectric standards.

Complies with MIL specs. for shock (100G 11 misc.), acceleration (100G 15 min.), vibration (100G 5 to 5,000 cps.), temperature (to 150 degrees C), RF noise (I-26600).

AC single and polyphase units supply sine waveform output (to 2% harmonics), will deliver up to ten times rated line current into a short circuit to actuate MIL type magnetic circuit breakers or fuses, will start gyros and motors with starting current surges up to ten times normal operating line current.

Now in use in major missiles, powering telemeter transmitters, radar beacons, electronic equipment. Single and polyphase units now power airborne and marine missile gyros, synchros, servos, magnetic amplifiers.

Interelectronics—first and most experienced in the solid-state power supply field produces its own all-silicon solid-state gating elements, all high flux density magnetic components, high temperature ultra-reliable film capacitors and components, has complete facilities and know how—has designed and delivered more working KVA than any other firm!

For complete engineering data, write Interelectronics today, or call (914) EL 8-8000 in Congers.

POWER PACKS
(WITH SIMPLIFIED CONTROLS)

These models consist of standard 2- and 5-ma power packs with simplified control panels. They are low cost supplies, designed for relay rack mounting; however, all components are industrial grade.

FEATURES

- Output-connected KV meter, 3½" square, 2% accuracy, single range
- Output-connected current meter, 3½" square, 2% accuracy, single range
- Continuously adjustable output control
- AC input switch, fuse, and pilot light
- HV fuse, with blown indicator
- 115-volt, 50/60-Hz input
- Surge and transient protection on all meters and powerstats
- Reversible polarity (except 60 KV)

OUTPUT (KV)	CURRENT (ma)	RIPPLE (% rms/ma)	POLARITY	MODEL NO.	KV METER	CURRENT METER (ma)	SIZE W-H-D (in.)	PRICE ($)

POWER PACKS

We have a wide range of compact miniaturized power packs, with output voltages from 2 to 100 KV and current ratings of 2, 5 or 10 milliamperes. They are designed for long life and trouble free operation. Our own advanced high voltage techniques permit greater size and weight reductions than previously possible.

All units are housed in hermetically sealed MIL-T-27A cans, and are vacuum filled with mineral type transformer oil or epoxy. The insulating medium insures corona-free operation and allows for running the supply at 3 or 4 times normal current rating for long periods of time. The corona-free operation precludes component failure caused by long term corona degradation of insulation, and guarantees a pure DC output free of any interfering high frequency signals which might possibly influence or affect the system which it is powering.

Every component in the supply is operated at well below its design rating and pre-assembly hipotted at 1½ times its operating voltage.

The output connections are high voltage ceramic bushings type on models 30 KV and below, and plug-in re-entrant receptacles for coaxial cables on higher than 30 KV units. Three-foot cable assemblies are supplied with each re-entrant bushing type, and longer lines are easily assembled if required.

For special requirements, consult factory.

OUTPUT VOLTAGE (KV)	CURRENT (ma)	MODEL NO.	SIZE HxWxD (in.)	PRICE ($)

60	2	60A	10x6x8	325
100	2	100A	15½ x8⅛ x9¼	625

FEATURES

- Hermetically sealed, oil- or epoxy-filled
- Solid state rectifiers
- 10-year life
- Low ripple
- Good regulation
- Compact, highly miniaturized
- Reversible polarity

Inquiries are invited for units with outputs different than our standards, built-in line regulation, short circuit, current-limited features, lower output ripple, 220V, 50/60-cycle inputs, or center-tapped output.

SPECIFICATIONS

Input 0-125 volts, output voltages and currents stated for nominal 117 volt input.

Regulation 10 to 15% no load to full load

Ripple ½% rms per milliampere output

Life 10 years at 25°C ambient with rated output voltage and current

Terminations Ceramic bushings on models 30 KV and below. Re-entrant receptacles with 3-foot mating coaxial cables on models 40 KV and up

INDEX by OUTPUT VOLTAGE

This index is specially arranged to facilitate the selection of the proper power supply for every job. It complements the *design group* listings by grouping models according to their *voltage rating*. Thus, for example, it is easy to determine which *groups* have models in any desired *voltage range* — and then to examine their comparative specifications in detail.

KEPCO®

ORDERING INFORMATION

Kepco power supplies are marketed on a direct factory basis through independent sales representatives throughout the United States and many other countries. The back page of this catalog will give you the address and telephone number of the office closest to you. These factory-trained men will be most pleased to give you every assistance in choosing, ordering and using these products.

PRICES

Prices are f.o.b. Kepco's factory in Flushing, New York, effective March 15, 1970. Please contact our sales office for delivered prices (f.o.b. destination). All prices and specifications are subject to change without notice.

DISCOUNTS

Discounts are available to quantity buyers. For details please consult with the Kepco Sales Department.

SHIPPING

Our usual means of shipment is by insured motor freight or, location permitting, United Parcel Service. Air shipments or special routing are available on request. Power supplies cannot be shipped via Parcel Post.

WARRANTY (5 YEARS)

All Kepco products listed in this catalog, shipped on or after March 1, 1970, are backed by a firm *five-year* warranty covering the cost of *parts and labor.* The warranty is honored at our factory Service Department, Flushing, New York, and at field service depots maintained at strategic cities. Consult your local sales representative concerning the availability of local service.

SHIPMENT TO THE FACTORY

All goods shipped to the factory must be prepaid and must be accompanied by documentation explaining the reason for the return.

PARTS

You can obtain service parts without cost for warranty repairs by contacting your local field representative or from Kepco directly. When ordering parts, please use the identifying Kepco part number, and give the model and serial number of the instrument for which they are intended. DO NOT SHIP ANY PARTS TO KEPCO UNLESS AUTHORIZATION TAGS AND INSTRUCTIONS HAVE BEEN PROVIDED.

SPECIAL PAINTING

Kepco will paint to your color specifications. Contact our factory sales office for prices.

INSTRUCTION MANUALS

One complete manual is packed with each model. This manual contains instructions, schematics, parts lists, locating drawings and comprehensive theory sections. We will pack an additional manual *without charge* if specified on your original order. Additional copies of the manuals are available at a cost of $5.00 each (except PRM manuals at $0.25 each). Please specify the *serial number* of the model for which supplementary manuals are ordered.

REPRODUCTION

Written permission from Kepco, Inc., is required prior to the reproduction of any technical data.

DOCUMENTATION

If specified with your order, Certified Test Reports and Certificates of Compliance (with terms of the order) will be issued without cost.

RETURNED GOODS (Ordered in Error—Restockin

Return of new/unused models is permitted within the first t (30) days only. There is a restocking fee equal to 10% of the price: $25.00 minimum charge. Please contact factory authorization prior to returning equipment for credit.

SOURCE INSPECTION

Kepco will make available facilities for inplant inspection o ished goods only. Charge: 2% of sales price or $25.00 mini For shipments requiring DD250 forms add $10.00 per DD25

OVERSEAS MODELS

All units are factory-wired for 115V a-c. Many models are e ped for easy changeover from 115V a-c to 230V a-c input. W such provision is specified in this catalog, you may reque factory to do the changeover wiring for you at a cost of $ per unit, $25.00 minimum per order. Most models will a modate a range of input frequencies that encompasses 50– and some models (as specified on their catalog page) will a source frequencies to 440 Hz. PRM models are single freq devices and must be ordered with a "–50" suffix for ope from a 50 Hz source. See PRM page for price.

EXPORT PACKING

We will crate in a separate wooden box for export shipment sult factory for prices.

MOISTURE and FUNGUS PROOFING

You may order any power supply with a moisture and fun sistant varnish coating applied to the interior surfaces. C factory for prices.

SPECIAL FEATURES

The factory will assign a special identification number to altered to your requirements. Feel free to consult our A tions Engineers with your requirements. Questions concerni facilities features, behavior, and characteristics of any p may be directed to the Kepco Applications Engineering D ment. A staff of specialists is happy to provide any assista the application of Kepco's Power Supplies to your require

PATENTS

The products described in this catalog are manufactured an under license from the *Forbro Design Corp.* Applicable numbers will be furnished on request.

PUBLICATIONS

Kepco publishes a useful Handbook and various technical dealing with the use of modern power supplies. Use the e business reply card to order your personal copy. Co Kepco's publications are also available through Kepco representatives.

COMMUNICATIONS

Address all mail to:
Kepco, Inc., 131-38 Sanford Avenue, Flushing, N.Y. 11
Telephone: 212-461-7000
TWX Number: 710-582-2631
Telex: 12-6055
Cable Address: KEPCOPOWER NEWYORK

all KEPCO® products are backed by a firm 5-Year Warranty

COVERING THE COST OF PARTS AND LABOR. THE WARRANTY IS HONORED AT OUR FACTORY SERVICE DEPARTMENT, FLUSHING, N. Y., AND THROUGH OUR FIELD REPRESENTATIVES. (SEE PAGE 1118 FOR A COMPLETE LIST OF OFFICES.)

HOW TO USE THIS CATALOG

's 170 power supply catalog is organized into major pro-
you for ready access. The groups are classified by a shared
cha cteristic:

n 1: Modules . . . . . Page 1086
n 2: High Speed (fast programming) . . . . . Page 1094
n 3: High Voltage (200V and over) . . . . . Page 1097
n 4: General Purpose . . . . . Page 1101
n 5: Special Purpose (strain gauge, I-C's, etc.) . Page 1104
n 6: Programmers (digital systems) . . . . . Page 1110
n 7: Accessories (crowbars) . . . . . Page 1112
n 8: Hardware (rack adapters) . . . . . Page 1113

nay nter this catalog in a number of ways. If you know a de gnation, you'll find its group classification in the fea res chart on page 1080. If you're looking for a certain of ower supply; for example: "Modules," the features will ggest several models groups for your attention:

Primary Listings:– BKF, PAT, PAX, PCX, PRM;
Cross Reference:– BOP, CPS, JQE, OPS.

If you are wondering what is available in certain volt/ampere ranges, the INDEX-by-OUTPUT-VOLTAGE lists *all* models, with a page reference, in the order of their maximum output voltage, then current.

Kepco power supplies are manufactured in DESIGN GROUPS, identified by a letter group prefix. All models in a given design group share major electrical and physical characteristics and are produced in a variety of voltage/current output combinations.

Within a design group, the individual models are identified by a series of numbers representing the rated output in volts and amperes—or sometimes voltage only.

Many groups are available with optional features, such as calibration controls, overvoltage protectors, high-speed modifications, cases, etc. These options are identified by the use of a suffix letter appended to the model number.

To identify a power supply, a complete model number is required, prefix, rating, and suffix. It is important for the expeditious handling of inquiries, orders, etc., that the full Kepco model number be used for identification, even if local specification control numbers have been assigned by your organization.

KEPCO

BKF

MODULAR

POWER SUPPLIES

The Kepco BKF design combines an I-C driven series transistor regulator, with a modified re-entrant overcurrent circuit. Voltage is controlled over a small adjustment range, protected by a built-in overvoltage crowbar. The crowbar trip point is tabulated for each model. Adjustable trip is optionally available.

Typical BKF Group I Module (Available Cased Only)

GROUP I

♦ Uncased, to order a cased Group II Model, add $12.00 to the price.

Typical BKF Group II Cased Module Shown

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE Group I	Group II
OUTPUT RANGE:	±10% trimmer	±5% trimmer
SOURCE: 105-125/210-250V a-c	<0.05%	<0.05%
LOAD: No load — full load	<0.05%	<0.05%
TIME: 8-hours (drift)	<0.05%	<0.05%
TEMPERATURE: Per °C	<0.05%	<0.05%
RIPPLE: (rms)	<0.5mV	<0.5mV

INPUT: 105-125 or 210-250V a-c (selected) 50-440 Hz, single phase.

TEMPERATURE, AMBIENT OPERATING: (no derating)
Group I —*Cased Only:* 0°C to + 55°C
Group II—*Uncased:* 0°C to + 65°C
Cased: 0°C to + 55°C

TEMPERATURE, STORAGE: —20°C to + 85°C

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

CONTROL: Output is controlled by a built-in multiturn rheostat trimmer. There is no provision for external programming.

VOLTAGE RECOVERY (for step load current): <50 μseconds.

OVERLOAD CURRENT CUTOFF: Modified adjustable re-entrant. Cutoff point is adjustable from 10% to 110% of the maximum current rating.

REMOTE ERROR SENSING: Compensates for up to 0.5 drop per output lead.

OVERSHOOT: (Turn-on/off): None.

SERIES/PARALLEL: BKF Modules can be series connecte additional voltage up to their rated isolation voltage. is no provision for parallel operation.

OVERVOLTAGE PROTECTOR: All models are equipped a built-in crowbar whose trip point is tabulated for model (turn-off to re-set). Triggering time is <10 μsec **Optional Adjustable Crowbar trip:** add suffix "—V" t model number for an installed trimmer which will a the crowbar trip from —10% Eo nominal to +20% Eo nor Add $15.00 to the price of the model.

TERMINALS: All input, output and sensing connection made via a single multiterminal barrier strip.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH & CASES: Group I: Cased only, finish is black ar ing. Group II: Specify a cased model by appending the "C" to the model number and $12.00 to the price. Case fin in royal blue epoxy.

MOUNTING: For rack mounting use adapters:
Group I—RA26-1: mounts single module; RA 27-2: mount modules; RA 28-4: mounts four modules.
Group II—RA 25-1: mounts single module; RA 8-2: mount modules; RA 9-3: mounts three modules
See Hardware section for a description of the various adapters.

Data and prices subject to change without notice. *All terms used in the specifications are defined in the Kepco G*

	0 to −16	0 to −0.6					

● Full output current to 71°C, no derating.

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE No. 1	VOLTAGE No. 2
OUTPUT RANGE:	0 to +16V	0 to −16V
SOURCE: 105-125/210-250V a-c	<0.05% or 2mV*	<0.05% or 2mV*
LOAD: No load — full load	<0.05% or 2mV*	<0.05% or 2mV*
TIME: 8-hours (drift)	<0.05% or 4mV*	<0.05% or 4mV*
TEMPERATURE: Per °C	<0.05%	<0.05%
RIPPLE: (rms)	<0.5mV	<0.5mV

**whichever is greater*

INPUT: 105–125V a-c or 210–250V a-c (selected).

TEMPERATURE, AMBIENT OPERATING: −20°C to +71°C.

TEMPERATURE, STORAGE: −40°C to +85°C

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

CONTROL/PROGRAMMING: Output is controlled by a single built-in, multi-turn rheostat trimmer, which adjusts both output voltages simultaneously. The minus output tracks the plus output in any ratio. They can be set to produce identical voltage i.e., 0 to + 15 and 0 − 15 volts or unequal voltages i.e. 0 to + 12V and 0 to −6V. Remote control may be exercised over both voltages by means of a simple external rheostat controlling the master (+) output at ≅ 1000 ohms per volt, not calibrated.

TRACKING: Adjustable to ±50mV over 1V to 15V range.

VOLTAGE RECOVERY (for step load current): <50 μseconds.

CURRENT LIMITING: Each output individually protected by independently adjusted current limiter. Range: 10% to 110% of I_O maximum. The two outputs track with *plus out* serving as master. If the plus output goes into current limiting, the negative output will follow.

REMOTE ERROR SENSING: Compensates for up to 0.5 volts drop per output lead (3 wire).

OVERSHOOT: (Turn-on/off): No overshoot above a 25% voltage setting. For settings below 25% of E_O max, overshoot will be negligible when preloaded to 10% minimum.

SERIES/PARALLEL: Plus and minus outputs share a common terminal. They may be loaded individually or in series; no provision for parallel operation.

TERMINALS: Input and output and control connections are made to a barrier strip.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: Black anodized aluminum.

MOUNTING: Rack mount with adapters RA 26–1, RA 27–2 or RA 28–4.

Data and prices subject to change without notice.

All terms used in the specifications are defined in the Kepco Glossary.

KEPCO™

PAT

MODULAR

POWER SUPPLIES

The Kepco PAT series of voltage regulated modular power supplies features compact repairable construction of a precision programmable regulator. The output is a self-cooled series NPN transistor driven by a monolithic linear I-C amplifier and protected by adjustable current limiting. The regulator will control current when equipped with an external pair of sensing and feedback resistors.

**whichever is greater*

***External sensing, using a 1V sample. Effects are measured at rated sample voltage with 20 PPM external current feedback control.*

****Offsets and the reference contribute to output change ΔE_O, by the equation $\Delta E_O = \pm\Delta E_{ref}(R_f/R_i) \pm\Delta E_{io}(1+R_f/R_i) \pm\Delta I_{io}(R_f)$ where R_f is the feedback resistor and R_i is the input resistor from the signal reference. Use the offsets to calculate output variations when external input/feedback elements are substituted for the internal reference and voltage control in special applications.*

†See OPTIONS for 0.005% per °C voltage mode – 0.01% per °C current mode temperature effect coefficient.

INPUT: 105-125V a-c or 210-250V a-c (selected), 50-440 Hz, single phase.

TEMPERATURE, AMBIENT OPERATING: Cased: –20°C to +71°C.

TEMPERATURE, STORAGE: –40°C to +85°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

PROGRAMMING: PAT is fully programmable by resistance or external voltage signals. Control current is 1 mA for 1000 ohms/V (option "–R" provides a calibration control). The positive terminal is common. *Note:* Programming resistance not supplied. For operational (amplifier) control, an offset voltage nulling control is available. See Option "–E".

OPEN LOOP d-c GAIN: $>0.5\times10^6$ volts per volt.

VOLTAGE RECOVERY (for step load current): <50 μseconds for recovery to within 0.005% or 2 mV of setting.

CURRENT LIMITING: Adjustable from 10% to 105% of rated full current with provision for remote control.

REMOTE ERROR SENSING: Compensates up to 0.5 volt drop per output lead.

OVERSHOOT: (Turn-on/off): None above 25% voltage setting; negligible below 25% when preloaded to 10% mini m.

SERIES/PARALLEL: Series operation to rated isolation; so master/slave capability. Current limiting design permits se de- termined parallel load sharing.

TERMINALS: All input, output and control connection are made via a multi-terminal barrier strip.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: Black anodized aluminum.

MOUNTING: Rack mount with adapters RA 26-1, RA 27 or RA 28-4. *See Hardware section.*

OPTIONS: (add suffix to the model number).

"–R" CONTROL CURRENT ADJUSTMENT: ± 10% tri er provides for programming calibration. Add $10.00 to ce.

"–T" LOWER TEMPERATURE EFFECT COEFFICIENT: 0. % per °C in voltage mode, 0.01% per °C in current mode dd $30.00 to price.

"–E" OFFSET VOLTAGE NULLING: For operational pro m- ming. Zeros the fixed part of the control amplifier's v ge offset. Add $10.00 to price.

Data and prices subject to change without notice.

KEPCO PAX MODULAR

WER SUPPLIES

6 uncased modules mounted in RA 22-6 housing using BPA-22 slide adapters

X odules are low cost, single-amplifier power supplies that can be d th voltage or current feedback. The HS models (high speed) are e lly recommended for current control because of their fast-recov- racteristics. In the PAX design, a convection-cooled PNP series s nsistor is used, the negative output terminal is common to the n nput. The PAX models are thus the signal-complement of the X d OPS designs.

All terms used in the specifications are defined in the Kepco G

KEPCO PRM

MODULAR POWER SUPPLIES

The Kepco PRM voltage regulated modules are simple, reliable, efficient, fixed output sources. The design is based on a ferroresonant power transformer called Flux-O-Tran® which provides both regulating and overload current limiting. The extra-filtered models (suffix F) have a Pi section LC filter, reducing their ripple to about a tenth that of the single section capacitor-filtered models. The *dual* output models have two independent d-c circuits that may be used in series or in parallel or separately. Size "D" models feature an adjustable output tap.

TYPICAL LOAD EFFECT CURVE FOR ALL MODELS (EXCEPT SIZE "D")

TYPICAL OUTPUT RIPPLE CURVES FOR EXTRA-FILTERED MODELS, PLOTTED AS A FUNCTION OF LOAD CURRENT

TYPICAL OUTPUT RIPPLE CURVES FOR SIZES A B and C (duals), PLOTTED AS A FUNCTION OF LOAD CURRENT

TYPICAL LOAD EFFECT CURVES FOR THE SIZE "D" PRM MODELS

This tabluation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variations and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS				
	SIZE A 180 SERIES	SIZE B 120 SERIES	SIZE C – 180F Extra-Filter	SIZE C – 300 Dual-Output	SIZE D 60 SERIES
Accuracy: (of fixed setting)*	±2%	±2%	±2%†	±2%††	±2%
Source: 100-130V a-c	±1%‡	±1%‡	±1%‡	±1%▼	±1%‡
Load: no load–full load	See charts for maximum value; the graphs show typical performance.				
Time: 8-hours (drift)	1% or 0.1V**	1% or 0.1V**	1% or 0.1V**	1% or 0.1V**	1% or 0.1V**
Temperature: per °C	0.05%	0.05%	0.05%	0.05%	0.05%
Ripple: (rms)	See charts for maximum value; the graphs show typical performance.				
Input Power: (at 115V a-c)	3A (280 W)	2A (190 W)	3A (280 W)	5A (465 W)	1.1A (100 W)

** At 115V a-c, full load and 30°C. The initial (cold) output is 1% higher.* *** Whichever is greater.*
† The extra filter stage introduces an additional 2% drop. A 10% reduction in load current will compensate for this loss.
†† Interaction between sections of the dual supply produce an extra –2% change when the other section is loaded from zero to maximum.
‡ For ±15V a-c source variation with loads between 25–100%. For loads below 25% the source effect is ±1.5%.
▼ For ±15V a-c source variations with loads between 50–100%. For loads below 50% the source effect is ±1.5%.

INPUT: 115V a-c ±15V a-c, 60 Hz ±5% single phase.

Overseas Models: For 50 Hz ±5%, specify suffix "–50." Inputs (selectable) are: 104 ±13.5V a-c, 115 ±15V a-c, 208 ±27V a-c or 230 ±30V a-c. Output current rating is decreased 20% in the 50 Hz version. Add $15.00 to the unit price.

NOTE: Input frequency variations produce an approximately equal percentage output voltage change.

TEMPERATURE, AMBIENT OPERATING: –20°C to +55°C.

TEMPERATURE, STORAGE: –40°C to +85°C.

COOLING: Convection.

OUTPUT IMPEDANCE: 1 kHz to 10 kHz: 0.05 ohms, 10 kHz to 100 kHz: 0.05 ohms + 0.5 microhenries. Below 1000 Hz, the impedance is a function of load current and may be derived from the slope of the load regulation curve ΔE/ΔI.

VOLTAGE RECOVERY (step load current, 50–100%): <400 ms.

OVERLOAD PROTECTION: Current limiting transformer stricts short circuit current to safe value. A thermal circ breaker is employed in *dual* models.

ISOLATION: The output terminals are isolated from t grounded case. A maximum of 600 volts (d-c or peak) can connected between either output terminal and the case between the outputs of dual models.)

SERIES/PARALLEL OPERATION: Identical models, or halv of a dual supply can be paralleled for approximately doul current (allow for 10% imbalance). Series operation to rat isolation.

ACCESSORIES: Various rack adapters available, see ha ware page. *Cases:* Size A uses CA-200; Size C uses CA-3 Sizes B and D have non-removable integral enclosures. order a fully cased model in sizes A and C, add a suffix let "C" to the model number.

FINISH: *Cases:* royal blue.

DIMENSIONS: See dimensional listings on Page 1117.

SIZE "A" — 180 SERIES

	SLOW	500 μsec.	500 μsec.	500 μsec.	500 μsec.	500 μsec.
CURRENT RECOVERY TIME CONSTANT for step load voltage	FAST	50 μsec.	50 μsec.	50 μsec.	50 μsec.	50 μsec.
	SLOW	1 msec.	500 μsec.	500 μsec.	500 μsec.	500 μsec.

OPEN LOOP d-c GAIN: 35,000 V/V. Roll off −6dB per octave.
OUTPUT IMPEDANCE: Tabulated at d-c. Rises at 6 dB per octave. At high frequencies, include the effect of a 100 μH equivalent series inductance.
DISTORTION (for $2V_{pp}$ output, no load): Harmonic: < 0.5%
OFFSET NULLING: The fixed parts of the offset voltage and offset current can be nulled using recessed panel controls.

Model BOP 36

REFERENCES: Two, +6.2V ±5% and −6.2V ±5% ava simultaneously; loading: 1mA.

PROGRAMMING: Control by the manipulation of inpu feedback elements. The BOP is a bipolar invertin amplifier that obeys the equation: $E_{OUT} = E_{IN} \frac{Z_{feedbo}}{Z_{inpu}}$

A vernier feedback rheostat and input potentiometer is vided on the bench model, along with an operational panel and metering. The unmetered module requires ex input and feedback elements.

INPUT: 105-125/210-250V a-c, 50-65 Hz. single phase.

TEMPERATURE, AMBIENT OPERATING: −20°C to +65

TEMPERATURE, STORAGE: −40°C to +85°C.

COOLING: Forced air; built-in blower.

ISOLATION: The output terminals are isolated fron grounded case. A maximum of 500 volts (d-c or peak be connected between either terminal and the case.

TERMINALS: Ten-terminal front panel patch board. terminal rear mounted barrier strip duplicates func Unmetered model has rear barrier strip terminals only.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panel:* Light gray, Color 26440 per Fed. Std. 59 *Case:* Charcoal gray texture.

MOUNTING: Full rack sized models have accessory f for direct installation in standard 19" racks. Unmetered models are in modular form for chassis mounting, half-rac models may be mounted in RA-24 by use of an adapter RAP 24-2B.

METERS: Half rack models use a single multi-function for d-c volts and amperes and a-c volts. Full rack have separate voltmeter and ammeter. The voltmeter switched to read d-c or a-c volts. Unmetered mode available in all sizes with a blank front panel. These may be used as modules with external input/feedbac ments connected to the rear barrier strip. To order a m version, delete the suffix "M" from the model number a duct $60.00 from the price.

Data and prices subject to change without notice.

All terms used in the specifications are defined in the Kepco G

KEPCO OPS-B

PLUG-IN MODULAR

POWER SUPPLIES

Cased Module

Typical "BTA" Panel Plug-in Model

pco Operational Power Supply is a unique in- rumnt; a combination self-powered operational wamplifier and d-c power supply. The OPS group sable for a wide variety of signal processing or scaling, summing, integrating and impedance ansrmation. All models incorporate a linear I-C pumplifier. The "B" models are in modular form r M's; the "BTA versions are plug-in modules hicoffer a 10-terminal patch panel for bench-type eional manipulations. Their fast output slewing ab the OPS models to be fast-recovery, program- abl current controllers or audio spectrum voltage nplers.

● Full output current to 65°C, no derating.
♦ For case, add Suffix "C" to model number and $12.00 to price.

his bulation specifies the limit of change in the mpler offsets for defined variations in the major fluces. To obtain a realistic appraisal of the be- avir in your environment, multiply each influence y i probable range of variation and sum the perti- ent fects.

SPECIFICATION	VOLTAGE AMPLIFIER OFFSETS* OFFSET VOLTAGE ΔE_{io}	VOLTAGE AMPLIFIER OFFSETS* OFFSET CURRENT ΔI_{io}	REFERENCES ±6.2V *
SRCE: 105-125/210-250V a-c	<10 μV	<2 nA	<0.0001%
LD: No load — full load	<200 μV	<5 nA	———
TE: 8-hours (drift)	<20 μV	<2 nA	<0.005%
TMPERATURE: Per °C	<20 μV	<5 nA	<0.005%

Ots and the reference contribute to output change ΔE_O, by the equation $\Delta E_O = \pm\Delta E_{ref}(R_f/R_i) \pm\Delta E_{io}(1+R_f/R_i) \pm\Delta I_{io}(R_f)$ where R_f is the feedback re tor and R_i is the input resistor from the signal reference. Use the offsets to calculate the output effects.

Bench Style Model OPS 20

PEN LOOP d-c GAIN: >0.5×10⁶ volts per volt.

OUTPUT SLEWING RATE: See chart. (measured as the chord o t first time constant on the exponential response).

SINUSOIDAL FREQUENCY RESPONSE: $f_{max.} = \frac{\text{Slew Rate}}{\pi E_{pp}}$ (E_{pp} is the peak-to-peak voltage excursion.)

RIPPLE: <0.01% of max. output, or 3mV whichever is greater.

MAXIMUM CAPACITIVE LOADING: 0.001 microfarads. Excess capitance slows response and causes peaking of response and nstability. Adjustable lag networks provide for small ran of load reactance.

TRANSIENT RESPONSE Voltage Mode (for step load current): recvery is an exponential with 50 microsecond time constant. Current Mode (for step load voltage): recovery is the recip- roc of the slewing rate.

OFFSET NULLING: Fixed part of input offset voltage and inp offset currents can be nulled. OPS-BTA models feature fro panel nulling. The "B" Modules have internal trimmers.

REFERENCES: Two at +6.2V and –6.2V; 1 mA max.

PROGRAMMING: Control by the manipulation of input and feeack elements. The OPS is a high gain inverting amplifier tha obeys the equation $E_{OUT} = -E_{IN}(Z_{feedback}/Z_{input})$.

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-440 Hz, 1Ø.

TEMPERATURE, AMBIENT OPERATING: –20°C to +65°C.

TEMPERATURE, STORAGE: –40°C to +85° C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

CURRENT LIMITING: Adjustable from 10% to 110% of rated current.

TERMINALS: Connections via a rear mounted barrier strip. Modules and OPS-BTA include a PC connector. Bench models have front panel terminal pattern.

DIMENSIONS: See dimensional listings on Page 1117.

Model OPS 20 is available in a bench style case only.
OPS 7-2B to OPS 100-0.2B are available uncased, or with CA-1 case (-C), or as plug-in patch board units (-TA).

FINISH: *Modules:* Blue anodized aluminum.
Panels: Light gray, color 26440 per Fed Std. 595.
Bench style Case: Charcoal gray texture. (OPS 20 only)

MOUNTING: Cased modules may be racked with adapters RA 12-1, RA 13-4 or RA 11-16. Uncased modules with BPA-22 adapter and the (-TA) plug-in units, mount in housings CA-3, CA-4, CA-5 or RA 22-6. Model OPS 20 may be rack mounted with RA-24. *See Hardware Section.*

KEPCO OPS HYBRID

POWER SUPPLIES

The Kepco Operational Power Supply is a unique instrument; a combination self-powered operational power amplifier and d-c power supply. The OPS group is suitable for a wide variety of signal processing chores: scaling, summing, integrating and impedance transformation. The OPS Hybrids utilize a high voltage vacuum tube, together with a d-c coupled transistor amplifier. Their fast output slewing enables the OPS models to be fast-recovery, programmable, current controllers or audio spectrum voltage amplifiers.

● Full output current to 65°C, no derating.

This tabulation specifies the limit of change in the amplifier offsets—or current mode output effects—for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	VOLTAGE AMPLIFIER OFFSETS* OFFSET VOLTAGE ΔE_{io}	VOLTAGE AMPLIFIER OFFSETS* OFFSET CURRENT ΔI_{io}	OUTPUT EFFECTS CURRENT MODE AUTO-CROSSOVER (Internal Sensing)	REFERENCES ±6.2V *
SOURCE: 105-125/210-250V a-c	<0.1mV	<10nA	<10 μA	<0.0005%
LOAD: No load — full load	<1.0mV	<10nA	<10 μA	———
TIME: 8-hours (drift)	<0.1mV	<100nA	<0.01%	<0.005%
TEMPERATURE: Per °C	<0.5mV	<100nA	<0.01%	<0.005%

Offsets and the reference contribute to output change ΔE_o, by the equation $\Delta E_o = \pm\Delta E_{ref}(R_f/R_i) \pm\Delta E_{io}(1+R_f/R_i) \pm\Delta I_{io}(R_f)$ where R_f is the feedback resistor and R_i is the input resistor from the signal reference. Use the offsets to calculate output variations when external input/feedback elements are substituted for the internal reference and voltage control in special applications.

OPEN LOOP d-c GAIN: $>0.5X10^6$ volts per volt.

OUTPUT SLEWING RATE: See chart. (Measured as the chord to the first time constant on the exponential response.)

SINUSOIDAL FREQUENCY RESPONSE: f.max. $= \dfrac{\text{Slew Rate}}{\pi E_{pp}}$ (E_{pp} is the peak-to-peak voltage excursion.)

RIPPLE: <0.01% of max. output or 3mV, whichever is greater.

MAXIMUM CAPACITIVE LOADING: 0.001 microfarads. Excess capacitance slows response and causes peaking of response and ringing. Adjustable lag networks will compensate for small range of load reactance.

TRANSIENT RESPONSE Voltage Mode (for step load current): recovery is an exponential with 50 microsecond time constant. **Current Mode (for step load voltage):** Recovery is the reciprocal of the slewing rate.

OFFSET NULLING: Fixed part of input/offset voltage and input/offset currents can be nulled. OPS (Hybrid) models feature front panel nulling.

REFERENCES: Two at +6.2V and −6.2V; 1 mA maximum.

PROGRAMMING: Control by the manipulation of input d feedback elements. The OPS is a high gain inverting amp er that obeys the equation $E_{OUT} = -E_{IN}\,(Z_{feedback}/Z_{input})$. The positive terminal is common.

INPUT: 105–125V a-c or 210–250V ac (selected), 50–6 Hz single phase.

TEMPERATURE, AMBIENT OPERATING: −20°C to +65°C

TEMPERATURE, STORAGE: −40°C to +85°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from he grounded case. A maximum of 1000 volts (d-c or peak) c be connected between either output terminal and the case.

TERMINALS: Connections via a rear mounted barrier ip. Front panel terminal pattern provides for easy access in et-ting up operational manipulations.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panels:* Light gray, Color 26440 per Fed. Std. 595. *Cases:* Charcoal gray texture.

MOUNTING: Units may be rack mounted with RA–24. ee Hardware Section.

Data and prices subject to change without notice. *All terms used in the specifications are defined in the Kepco Gl ary.*

KEPCO ABC® HYBRID POWER SUPPLIES

The ABC group of bench-style programmable voltage regulators span a wide range of voltages. The transistor group covers 0–2V to 0–100V; the hybrid group 0–200V to 0–2500V. Hybrid models employ a high voltage vacuum tube series regulator, convection cooled, driven by a high gain transistor amplifier. The 0–200 and 0–425 volt models employ a continuous 1-turn wirewound, 20 PPM TC voltage control. The 0–1000 volt, 0–1500 volt and 0–2500 volt models employ a 10-step voltage selector with 10-turn vernier. They may be programmed, however, continuously from zero to their rated voltage.

Model ABC 2500M

◆ Price includes meter, for unmetered model, delete suffix "M" and deduct $20.00 for models ABC 200 and ABC 425. Deduct $15.00 for models ABC 1000, 1500 and 2500 (any quantity order).

● Full output current to 55°C, no derating.

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE** (External Sensing)
OUTPUT RANGE:	0–100% E_O max.	1 mA–100% I_O max.
SOURCE: 105-125/210-250V a-c	<0.05% or 5 mV*	<0.1% at rated sample**
LOAD: No load – full load	<0.05% or 5 mV*	<0.1% at rated sample**
TIME: 8-hours (drift)	<0.05% or 50 mV*	<0.1% or 10 μA*
TEMPERATURE: Per °C	<0.05%	<0.1% at rated sample**
RIPPLE: (rms)	See Table above	<0.1% I_O max.

*whichever is greater
**Rated sample is 10V d-c across external current sampling resistor, with external current control.

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-440 Hz single phase.

TEMPERATURE, AMBIENT OPERATING: –20°C to +55°C.

TEMPERATURE, STORAGE: –40°C to +85°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 1000 volts (d-c or peak) can be connected between either terminal and the case.

AC OUTPUT: 6.5V AC, 2A unregulated, available at the rear terminals of Models ABC 200M and ABC 425M.

CONTROL RESOLUTION: 0.05%, 10-turn voltage control on Models ABC 200M and ABC 425M. Resolution is 0.005% with 10-position selector and 10-turn vernier voltage control on Models ABC 1000M, ABC 1500M and ABC 2500M.

PROGRAMMING: ABC Models except Model ABC 2500 are fully programmable by resistance or external voltage signals. Model ABC 2500 can be controlled throughout its range by resistances. The control range for external voltage or current signals is restricted to the upper 2/3 of its output range. Control current is 1 mA with built-in calibrating control. (100 ohms/V). The positive terminal is common.

VOLTAGE RECOVERY (for step load current): <50 μseconds.

CURRENT LIMITING: Single turn panel adjustment sets limit from 25% to 150% of rated full current on Models ABC 200M and ABC 425M. A fixed limit set to approximately 150% is provided on Models ABC 1000M, ABC 1500M and ABC 2500M.

OVERSHOOT: (Turn-on/off): None above 25% voltage setting; negligible below 25% when preloaded to 10% minimum.

SERIES/PARALLEL: Series operation to rated isolation; also master/slave capability. Current limiting design permits self-determined parallel load sharing.

METERS: Suffix "M" designates a single dual scale 2½", 2% volt-ammeter with selector switch, for models ABC 200M and ABC 425M. Voltmeter only for Models ABC 1000M, ABC 1500M and ABC 2500M.
Delete suffix "M" for unmetered unit.

TERMINALS: Binding posts on front panel, plus, minus and ground. Multi-terminal barrier strip at the rear contains output and control terminals.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panel:* Brushed aluminum. *Case:* Charcoal gray texture.

MOUNTING: Mount single unit in rack adapter RA-5, two abreast in rack adapter RA-4. *See Hardware section.*

Data and prices subject to change without notice. *All terms used in the specifications are defined in the Kepco Glossary.*

KEPCO BHK

HIGH VOLTAGE

POWER SUPPLIES

Model BHK 1000—0.2M

The high voltage hybrid BHK models employ twin-transistor amplifiers (one for voltage, the other for current) to drive a series pass tube regulator in either voltage or current mode, with automatic crossover and VIX® mode indicators. By restrapping for high speed, the same model is also a fast programmable voltage or quick recovery current source. Built-in offset nulling controls allow precision operational programming. Panel controls are 10-turn, 20 PPM TC wirewound, with a 10-position selector for additional voltage resolution.

MODEL	DC OUTPUT RANGE VOLTS	DC OUTPUT RANGE AMPS●	OUTPUT IMPEDANCE Ohms + Microhenries d-c-100Hz	0-1-1kHz	1-100kHz+μH	PRICE ♦	SHIP WGT. (lbs.)

♦ Price includes meters, for unmetered models, delete suffix "M". In quantities of 12 or more units, deduct $30.00 from price.

● Full output current to 55°C, no derating.

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE (Internal Sensing)	VOLTAGE AMPLIFIER OFFSETS** ΔE_{io}	ΔI_{io}	VOLTAGE REFERENCE (INTERNAL)**
OUTPUT RANGE:	0-100% E_O max.	0.2%-100% I_O max.	——	——	Fixed 6.2V±5%
SOURCE: 105-125/210-250V a-c	<0.005% or 1 mV*	<100 μA	<1 mV	<10 nA	0.0001%
LOAD: No load — full load	<0.01% or 1 mV*	<100 μA	<1 mV	<10 nA	——
TIME: 8-hours (drift)	<0.01% or 2.0 mV*	<0.01% or 20μA*	<50 μV	<50 nA	0.005%
TEMPERATURE: Per °C	<0.01%	<0.05% of I_O max.	<100 μV	<50 nA	0.005%
RIPPLE: (rms)	<1 mV	<100 μA	——	——	——

**whichever is greater.*

***Offsets and the reference contribute to output change ΔE_O, by the equation $\Delta E_O = \pm\Delta E_{ref}(R_f/R_i) \pm\Delta E_{io}(1+R_f/R_i) \pm\Delta I_{io}(R_f)$ where R_f is the feedback resistor and R_i is the input resistor from the signal reference. Use the offsets to calculate output variations when external input/feedback elements are substituted for the internal reference and voltage control in special applications.*

AUTOMATIC CROSSOVER: Selects voltage regulation or current regulation operating mode automatically.

VIX® CIRCUIT: Voltage/Current mode indicators display operating conditions; also 115V a-c control signal (0.5A max.)

TEMPERATURE, AMBIENT OPERATING: −20°C to +55°C.

TEMPERATURE, STORAGE: −40°C to +85°C.

COOLING: Convection.

INPUT: 105-125 V a-c or 210-250V a-c (selected), 50-65 Hz single phase. Approximately 4 amperes at 125V a-c.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 1000 volts (d-c or peak) can be connected between either terminal and the case.

CONTROL RESOLUTION: Voltage: 0.005% 10-turn vernier control and 10 position selector. *Current:* 0.05% 10-turn control.

OVERSHOOT: (Turn-on/off): None above 10% voltage setting; negligible below 10% when preloaded to 10% minimum.

SERIES/PARALLEL: Automatic crossover design permits self-determined parallel load sharing, or use of master/slave connection. Series operation to rated isolation.

PROGRAMMING: BHK has independently programmable voltage and current regulators. They can be controlled by resistance or external voltage signals. Control current is 1mA with built-in calibrating controls (1000 ohms/V). The positive terminal is common.

OFFSET NULLING: The initial part of the input offset voltage and input offset current can be nulled with internal controls.

REFERENCES: Two: +6.2 volts and −6.2 volts; maximum current 1 milliampere.

Data and prices subject to change without notice.

OPEN LOOP d-c GAIN: $>0.5 \times 10^6$ volts per volt.

OUTPUT SLEWING RATE: *(Fast slewing connection)*: Great than 500,000 volts per second, measured as the chord to th first time constant on the exponential response.

SINUSOIDAL FREQUENCY RESPONSE:

Fast Slewing Connection: $f_{max} = \frac{160}{E_{pp}}$ kHz.

(E_{pp} is the peak-to-peak excursion).

RIPPLE, Fast Slewing Connection:

Ungrounded: <0.1% E_o max.

Grounded: <0.001% E_o max.

TRANSIENT RESPONSE:

Voltage Mode, Fast Slewing: For step load current, recov ery is an exponential with a 50 microsecond time constan

Current Mode, Fast Slewing: For step load voltage, recov ery is at the rate of 2 μsec. per volt.

Voltage Mode, Normal Speed: For step load current, recov ery to regulation band within 50 microseconds.

OUTPUT IMPEDANCE:

Voltage Mode, Normal Speed: See table.

Voltage Mode, Fast Slewing: Above 1kHz, add the reactiv impedance of 500 microhenries.

REMOTE ERROR SENSING: Compensates up to 0.5V drop per output lead.

METERS: Suffix "M" designates a pair of 2½", 2% meters Delete suffix "M" for unmetered unit.

TERMINALS: Safety (recessed) output connections on front panel; two multi-terminal barrier strips at the rear contain output, sensing and control functions. Fast slewing/normal strapping is internal.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: Light gray, color 26440, per Fed.|Std. 595.

All terms used in the specifications are defined in the Kepco Glossary.

● Full output current to 55°C, no derating.

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE (External Sensing)
OUTPUT RANGE:	0–100% E_O max.	10 mA–100% I_O max.
SOURCE: 105-125/210-250V a-c	<0.01%	<0.01% at rated sample**
LOAD: No load — full load	<0.01% or 2 mV*	<0.01% at rated sample**
TIME: 8-hours (drift)	<0.01% or 2 mV*	<0.05% or 0.2 mA*
TEMPERATURE: Per °C	<0.01%	<0.05% at rated sample**
RIPPLE: (rms)	<1 mV	<0.01% of I_O max.

**whichever is greater*
***Rated sample is 10V d-c across external current sampling resistor, with external current control.*

INPUT: 105-125 V or 210-250V a-c (selected), 50—440 Hz, single phase.

TEMPERATURE, AMBIENT OPERATING: —20°C to +55°C.

TEMPERATURE STORAGE: –40°C to +85°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 600 volts (d-c or peak) can be connected between either output terminal and the case.

AC OUTPUTS: Two unregulated, 6.5V a-c, 6A outputs.

CONTROL RESOLUTION: 0.02%, 5 step range selector, 10-turn vernier.

PROGRAMMING: HB is programmable by resistance or external voltage signals within the boundary of each range. By following the rating curves, programs can be executed below the range boundary. Control current is ≅ 10 mA for 100 ohms/V. The positive terminal is common.

VOLTAGE RECOVERY (for step load current): < 50 microseconds.

REMOTE ERROR SENSING: (Model HB 525M only) compensates to 0.5 volt drop per output lead.

OVERSHOOT (Turn-on/off): None above 25% voltage setting; negligible below 25% when preloaded 10% minimum.

RATING CURVES: Output is designed to deliver 100% of rated current within the span of any one range. When operating outside the selected range, either by remote programming, or as the compliance voltage in current mode, use the graph to determine the maximum current that can be drawn at reduced voltage.

RATING CURVES

Curves represent the volt-ampere rating for range switch positions 1–5. To use, determine which position covers the desired voltage. Read the maximum current for each voltage on the left scale.

METERS: Suffix "M" designates a pair of 2½", 2% meters. Delete suffix for unmetered unit.

TERMINALS: Binding posts on front panel, plus, minus and ground. Multi-terminal barrier strip at the rear contains output, sensing and control terminals.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: Light gray, color 26440, per Fed. Std. 595.

Data and prices subject to change without notice. *All terms used in the specifications are defined in the Kepco Glossary.*

◆ Price includes volt/ammeter, for unmetered models, delete suffix "M" and deduct $20 from price (any quantity order).
● Full output current to 50°C, no derating.

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE** (External Sensing)
OUTPUT RANGE:	0–100% E_O max.	1 mA to 100% I_O
SOURCE: 105-125/210-250V a-c	<0.05% or 1 mV*	<0.1% at rated sample**
LOAD: No load — full load	<0.05% or 1 mV*	<0.5% at rated sample**
TIME: 8-hours (drift)	<0.05% or 3 mV*	<0.1% or 1 mA*
TEMPERATURE: Per °C	<0.05%	<0.1% at rated sample**
RIPPLE: (rms)	<0.25 mV	<0.1% of I_O max.

*whichever is greater
**Rated sample is 1V d-c across external current sampling resistor, with external current control.

INPUT: 105-125V a-c or 210-250V a-c (selected), 50-440 Hz, single phase

TEMPERATURE, AMBIENT OPERATING: –20°C to +50°C.

TEMPERATURE, STORAGE: –40°C to +85°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

CONTROL RESOLUTION: 0.05%, 10-turn voltage control.

PROGRAMMING: ABC is fully programmable by resistance or external voltage signals. Control current is 1 mA with built-in calibration control (1000 ohms/V) — the negative terminal is common.

VOLTAGE RECOVERY: (for step load current): <50 μsec.

CURRENT LIMITING: Single turn panel adjustment sets limit from 25% to 150% of rated full current.

REMOTE ERROR SENSING: Compensates up to 0.5V drop per output lead.

OVERSHOOT: (Turn-on/off): None above 25% voltage setting. Negligible below 25% when preloaded to 10% minimum.

SERIES/PARALLEL: Series operation to rated isolation; also master/slave capability. Current limiting design permits self-determined parallel load sharing.

METERS: The suffix "M" designates a single dual scale volt-ammeter, 2½", 2%, with selector switch. Delete suffix for unmetered unit.

TERMINALS: Binding posts on front panel, plus, minus and ground. Multi-terminal barrier strip at rear contains output, sensing and control terminals.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panel:* Brushed aluminum
Case: Charcoal gray texture.

MOUNTING: Mount single unit in rack adapter RA-5, two abreast in rack adapter RA-4. *See Hardware section.*

Data and prices subject to change without notice.

All terms used in the specifications are defined in the Kepco Glossary.

Typical Full Rack Model

KEPCO JQE COMPACT POWER SUPPLIES

Typical ½ Rack Model

Typical ¼ Rack Model

JQE power supplies are compact general-purpose laboratory voltage regulators. They are equipped with a panel-adjusted overload current limiter and can be converted to current regulation by using external sensing and feedback resistors. JQE models feature a linear full-dissipation series NPN transistor-regulator driven by a monolithic linear I-C amplifier. Output is fully programmable with an offset zeroing control available as an option. An overvoltage crowbar is also an optional accessory (mounts internally). The JQE-HS high-speed option is recommended for current control because of its fast-recovery characteristics, and for fast programming applications.

*at 125V a-c, Pf. typical 0.7

This tabluation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variations and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE**	VOLTAGE AMPLIFIER OFFSETS*** OFFSET VOLTAGE ΔE_{io}	OFFSET CURRENT ΔI_{io}	VOLTAGE REFERENCE (INTERNAL)***
OUTPUT RANGE:	0–100% E_o max.	1 mA–100% I_o max.	——	——	Fixed 6.2V±5%
SOURCE: 105-125/210-250V a-c	<0.0005%	<0.005%**	<10 μV	<2 nA	0.0001%
LOAD: No load — full load	<0.005% or 0.2 mV*	<0.01%**	<200 μV	<5 nA	——
TIME: 8-hours (drift)	<0.01% or 1 mV*	<0.02**	<20 μV	<2 nA	0.005%
TEMPERATURE: Per °C	<0.01%†	<0.02**†	<20 μV	<5 nA	0.005%
RIPPLE: (rms)	<0.2 mV	<0.02% of I_o max.	——	——	——

*whichever is greater.

**External sensing, using a 1V sample. Effects are measured at rated sample voltage with 20 PPM external current feedback control.

***Offsets and the reference contribute to output change ΔE_O, by the equation $\Delta E_O = \pm\Delta E_{ref}(R_f/R_i) \pm\Delta E_{io}(1+R_f/R_i) \pm\Delta I_{io}(R_f)$ where R_f is the feedback resistor and R_i is the input resistor from the signal reference. Use the offsets to calculate output variations when external input/feedback elements are substituted for the internal reference and voltage control in special applications.

†See OPTIONS for 0.005% per °C voltage mode — 0.01% per °C current mode temperature effect coefficient.

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-65 Hz, 1Ø

TEMPERATURE, AMBIENT OPERATING: –20°C to + 71°C

TEMPERATURE, STORAGE: –50°C to + 85°C

COOLING: Forced air, built-in blower.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

CONTROLS: *Voltage:* 10-turn wirewound rheostat, Resolution: 0.05%.
Current: Multiturn vernier potentiometer.

PROGRAMMING: JQE is fully programmable by resistance or external voltage signals. Control current is 1mA with built-in calibration control (1000 ohms/V). For operational (amplifier) control, an offset voltage nulling control is available, see option "–E". High Speed models provide fast response to programming commands. (See option "–HS".) The positive terminal is common.

OPEN LOOP d-c GAIN: $>0.5\times10^6$ volts per volt.

VOLTAGE RECOVERY (for step load current): <50 μseconds for recovery to within 0.005% or 2 mV of setting.

OVERSHOOT (Turn on/off): Conventional speed models exhibit no overshoot when set above 25% of rated voltage or at any voltage setting when loaded to 10% of rated current (not applicable to HS models).

CURRENT LIMITING: Adjustable from 10% to 105% of the rated full current.

REMOTE ERROR SENSING: Compensates up to 0.5V drop per output lead.

SERIES/PARALLEL: Series operation to the rated isolation voltage. Units may be paralleled by employing their current limiters.

METERS: Two dual range, 2-inch, 2% recessed meters, monitor output voltage and current. 10:1 range switching. Unmetered versions available as modules, delete suffix "M" and deduct $30.00 from listed price (any quantity).

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panel:* Light gray, Color 26440, per Fed. Std. 595.
Case: Charcoal gray texture.

MOUNTING: JQE ¼ rack and ½ rack size models fit the RA-24 hardware system (*see hardware section*). Full rack sized models have accessory flanges for direct installation in standard 19" racks. Unmetered JQE models are in modular form for chassis mounting — or may be mounted in RA-24 by use of an adapter plate RAP 24-1J for ¼ rack size; RAP 24-2J for ½ rack size. Full rack units are predrilled for Jonathan slides 110 QD 20-1, 22-1, 24-1.

OPTIONS: (add suffix to the model number)

"–HS" HIGH SPEED OPTION for fast programming.

Output Slewing Rate: 100V per millisecond for models up to 20 amperes. 50V per millisecond for models over 20 amperes. Measured as the chord of the exponential to its first time constant.

Ripple: <0.01% of E_0 Max. or 3mV whichever is greater.

Output Impedance: From 1KHz to 100KHz add an inductance of 100 μH to the impedance specification in the table.

For HS option, add $50.00 to unit price. The HS option includes an offset voltage nulling control.

"–VP" OVERVOLTAGE CROWBAR: Shorts output terminals through an SCR if voltage attempts to exceed preset limit. Not available with HS option. (See table for price.)

Limit level range: 3 V d-c to 175V d-c.

Trigger time: 5-10 μsec., adjustable delay to minimize false alarms.

Threshold: 5% of output level — or 0.25 volts, whichever is greater.

"–T" LOWER TEMPERATURE EFFECT COEFFICIENT: 0.005% per °C in voltage mode, 0.01% per °C in current mode. Add $30.00 to price.

"–E" OFFSET VOLTAGE NULLING: For operational programming. Zeros the fixed part of the control amplifier's voltage offset. Add $10.00 to price.

Data and prices subject to change without notice. *All terms used in the specifications are defined in the Kepco Glossary.*

KEPCO™

CC

CONSTANT CURRENT

POWER SUPPLIES

The CC plug-in modules are current controllers with built-in dual-range, current-sensing resistors and 10-turn control. They employ Kepco's monolithic linear I-C amplifier driving a self-cooled NPN series transistor-regulator. Capacitorless output filtering ensures rapid recovery from switching or load transients. Output current ranges from true zero (no minimum) to the selected range (10% or 100% of the current rating) with 10-turn resolution. Metering is isolated by means of an I-C voltage follower.

♦ Uncased, available metered only. See MOUNTING below.

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS CURRENT MODE
OUTPUT RANGE:	0–100% or 0–10%, switched
SOURCE: 105-125/210-250V a-c	<0.0005% or 0.2 μA* (105-125)
LOAD: No load – full load	<0.005% or 2 μA*
TIME: 8-hours (drift)	<0.02% or 2 μA*
TEMPERATURE: Per °C	<0.01%
RIPPLE: (rms)	<0.02% of selected scale

**whichever is greater*

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-440 Hz, 1Ø.

TEMPERATURE, AMBIENT OPERATING: –20°C to +65°C.

TEMPERATURE, STORAGE: –40°C to +85°C.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

CONTROLS: A panel mounted output range selector switches the output either 0–100% I_o max. or 0–10% I_o max. A 10-turn precision current control operates full span through either range. Resolution: 0.05% of the full scale value. A combination on-off slide switch and pilot light provides primary power control.

PROGRAMMING: Control loop uses 0.1 milliampere, current sample is approximately 1V d-c. Supply may be programmed through either current range by a 0-10,000 ohm rheostat. (range switch is not programmable).

MAXIMUM CAPACITIVE LOADING: 0.001 microfarads.

CURRENT RECOVERY (for step load voltage): <2 μsec/volt, except Model CC 7-2M: 4 μsec/volt, measured to the first time constant on the exponential response.

VOLTAGE LIMITING: Fixed at approximately 150-200% of th rated compliance voltage.

SERIES/PARALLEL: Parallel operation of current sources ma be made without restriction. Series operation through the us of master-slave interconnection.

COOLING: Convection.

METERS: Two 2% recessed meters monitor output curren and compliance voltage. Current is displayed on a dual-scal meter whose range is switched with the range switch. Bot meters employ an isolation amplifier to minimize the loadin error.

TERMINALS: Output terminals (shorted) are located on th front panel, a-c input, output and control terminals are vi a rear PC connection which mates with the connector mount ed in the various housings and rack cabinets. These connector are. in turn, wired to barrier strips for easy access.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panel:* Light gray, color 26440, per Fed. Std. 595.
Housings: Charcoal gray texture.

MOUNTING: Power supplies are uncased, must be plugged into one of the following available housings: CA-3; single; CA-4; dual, CA-5; triple or RA 22-66-unit. *See Hardware section.*

Data and prices subject to change without notice. *All terms used in the specifications are defined in the Kepco Glossary.*

RIPPLE: (rms)	<0.25mV	<0.5mV

**whichever is greater*

***Specifications are for the individual supplies, changes in the master supply (plus output) are repeated 1:1 in the slave supply.*

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-440 Hz.

TEMPERATURE, AMBIENT OPERATING: −20°C to +65°C.

TEMPERATURE, STORAGE: −40°C to +85°C.

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) can be connected between either output terminal and the case.

OUTPUT: The individual power supplies are wired in series, controlled with a single voltage control. They may be loaded in series or separately.

CONTROLS: A 10 turn voltage control adjusts the output of the positive supply, designated "master", this voltage in turn controls the negative supply or "slave" in a 1:1 ratio. The two power supplies are connected in series. Control resolution is 0.05%.

TRACKING: ±5% range of adjustment is controlled by a recessed front panel control. Units can be adjusted to within ±0.5% using panel meter. Closer adjustment with external instrumentation.

PROGRAMMING: The master supply can be controlled by resistance or external voltage signals. Control current is 1 mA with built-in calibration control (1000 ohms/V). The plus output terminal is the programming return.

VOLTAGE RECOVERY, (for step load current): <50 μseconds.

CURRENT LIMITING: Each supply is individually limited with a 10% to 105% range of adjustment.

REMOTE ERROR SENSING: Compensates for up to 0.5 volt drop per output lead.

OVERSHOOT: (Turn-on/off): None above 25% voltage setting. Negligible below 25% when preloaded to 10% minimum.

METERS: Voltmeter monitors output of MASTER, or the difference between MASTER and SLAVE, displayed as a percentage error (range ±5%). Ammeter monitors current from either supply (selectable).

TERMINALS: Binding posts on the front panel for plus, common and minus outputs, also sensing terminals and separate ground. Barrier strip at the rear has duplicate output, sensing and control terminals.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panel:* Light gray Color 26440 per Fed. Std. 595.
Case: Charcoal gray texture.

MOUNTING: Rack adapter RA-24. *See Hardware section.*

Data and prices subject to change without notice. *All terms used in the specifications are defined in the Kepco Glossary.*

CPS Power Supplies are especially designed for driving digital I-C's. They feature an integral overvoltage crowbar and a linear full-dissipation series NPN transistor-regulator driven by a monolithic linear amplifier. On/off switching and crowbar reset is accomplished by a panel-mounted circuit breaker. The metered models feature panel-mounted, 10-turn voltage controls and dual meters. The CPS Power Supplies are also available unmetered, in modular form for OEM's with controls recessed.

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE	OUTPUT EFFECTS CURRENT MODE**	VOLTAGE AMPLIFIER OFFSETS*** OFFSET VOLTAGE ΔE_{io}	OFFSET CURRENT ΔI_{io}	VOLTAGE REFERENCE (INTERNAL)***

TEMPERATURE: Per °C	<0.01%†	<0.02**†	<20 μV	<5 nA	0.005%
RIPPLE: (rms)	<0.2 mV	<0.02% of I_o max.	——	——	——

*whichever is greater. †See OPTIONS for 0.005% per °C voltage mode – 0.01% per °C current mode temperature effect coefficient.
**External sensing, using a 1V sample. Effects are measured at rated sample voltage with 20 PPM external current feedback control.
***Offsets and the reference contribute to output change ΔE_o, by the equation $\Delta E_o = \pm\Delta E_{ref}(R_f/R_i) \pm \Delta E_{io}(1+R_f/R_i) \pm \Delta I_{io}(R_f)$ where R_f is the feedback resistor and R_i is the input resistor from the signal reference. Use the offsets to calculate output variations when external input/feedback elements are substituted for the internal reference and voltage control in special applications.

♦ Price is for the metered unit, deduct $30.00 for modular style.
● Full output current to 71°C, no derating.

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-65 Hz. 1Ø.

TEMPERATURE: AMBIENT OPERATING: –20°C to +71°C

TEMPERATURE, STORAGE: –50°C to + 85°C

COOLING: Forced air, built-in blower.

CONTROLS: *Voltage:* 10-turn, wirewound rheostat.
Resolution: 0.05%.
Current: Multiturn vernier potentiometer.

Unmetered models (without suffix M) are designed for chassis mounting as modules and have their voltage control and current limit control recessed.

PROGRAMMING: Control loop uses 1 milliampere. Supply may be programmed by resistance at 1000 ohms per volt, or may be operationally controlled as an amplifier (common positive) using voltage or current signals.

VOLTAGE RECOVERY (for step load current): <50 μseconds for recovery to within 2 mV of setting.

OVERSHOOT (Turn-on/off): None above 25% voltage setting; negligible below 25% when preloaded to 10% minimum.

CURRENT LIMITING: Adjustable from 10% to 105% of the rated full current.

REMOTE ERROR SENSING: Compensates up to 0.5V drop per output lead.

SERIES/PARALLEL: Series operation to the rated isolation v age. Units may be paralleled by employing their current limite

ISOLATION: The output terminals are isolated from t grounded case. A maximum of 500 volts (d-c or peak) m be connected between either terminal and the case.

METERS: Two dual range, 2-inch, 2% recessed meters, mo itor output voltage and current. Unmetered versions availab as modules, delete suffix "M" and deduct $30.00 from list price (any quantity).

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: (Metered models only have a panel).
Panel: Light gray, Color 26440 per Fed. Std. 5
Case: Charcoal gray texture.

MOUNTING: Full rack sized models have accessory flange for direct installation in standard 19" racks. Unmetered CP models are in modular form for chassis mounting or may b mounted in RA-24 by use of an adapter plate RAP 24-1 (fo ¼ rack size) and RAP 24-2 (for ½ rack size). Full rack unit are pre-drilled for Jonathan Slides 110 QD 20-1, 22-1, 24-

OPTIONS: (add suffix to the model number)

"–T" LOWER TEMPERATURE EFFECT COEFFICIENT: 0.005% per °C in voltage mode, 0.01% per °C in current mode. Ad $30.00 to price.

"–E" OFFSET VOLTAGE NULLING: For operational program ming. Zeros the fixed part of the control amplifier's voltag offset. Add $10.00 to price.

OVERVOLTAGE PROTECTOR: (built-in) An integral ove voltage crowbar is set by means of a recessed multitur panel control. Range is from 3V d-c to the maximum voltag rating plus 10%.

Triggering Time: 5-10 microseconds with an adjustable dela to minimize the false alarm rate.

Threshold: May be set to within 5% or 0.25 volts (whic ever is greater) of the power supply's output voltage.

8 uncased KG Modules in multiunit Housing RA 19–8

The KG isolated module is designed for driving balanced electronic circuits and bridges - often used with electromechanical transducers. The KG module offers minimal common mode line-coupled current, achieved by stringent isolation of the power transformer and line-related components, and nonmetallic, low-capacitance mounting. The modules are designed for plug-in mounting 8-abreast in a 19-inch rack or in an individual plug-in case.

Rear view of a KG Module in the single unit case, CA-2

MODEL	DC OUTPUT RANGE VOLTS	DC OUTPUT RANGE AMPS●	OUTPUT IMPEDANCE Ohms + Microhenries d-c to 100Hz	100 Hz to 1kHz	1kHz to 100kHz+μH	MAX. INPUT AMPS at 125 V a-c	PRICE ♦	SHIP WGT. (lbs.)

- *digital display*
- *current limiting*

Model PVS 100–1M — Price: $937.00 — Ship Wgt.: 37 l
Model PVS 100–1MG — Price: 873.00 — Ship Wgt.: 37 l

OUTPUT:	0.0000–100.00 volts
CURRENT:	0–1 ampere

This tabulation specifies the limit of change in the regulated output for defined variations in the major influences. To obtain a realistic appraisal of the behaviour in your environment, multiply each influence by its probable range of variation and sum the pertinent effects.

SPECIFICATION	OUTPUT EFFECTS VOLTAGE MODE
SOURCE: 105-125/210-250V a-c	<0.0005%
LOAD: No load — full load	<0.001% or 0.1 mV*
TIME: 8-hours (drift)	<0.005% or 1 mV*
TEMPERATURE: Per °C	<0.005% per °C
READOUT ACCURACY:	0.02% of full scale
RESOLUTION:	100 microvolts
RIPPLE: (rms)	<100μV rms
OUTPUT IMPEDANCE:	d-c–1kHz: $10^{-3}\Omega$ 1kHz–100kHz: $10^{-2}\Omega + 1\mu h$

*whichever is greater

The PVS Precision Voltage Source features an extremely low drift linear amplifier driving a self-cooled NPN power transistor stage. Voltage control is by means of digitally selected (1–2–4–8 BCD) precision —low TC, high stability feedback resistors with a 3-decade oven-controlled reference. Output is displayed on a 4½ digit readout with a built-in error-detecting system to prevent false indication. Output current is metered and the limit is adjustable. A remote digital programming connector is fitted to the voltage control (BCD switch closures). Model with suffix "G" omits the remote digital control feature. The 0.02% overall accuracy qualifies the Precision Voltage Source as an instrument calibrator.

INPUT: 105-125V a-c or 210-250V a-c (selected) 50-440 Hz, 1Ø.

TEMPERATURE, AMBIENT OPERATING: −20°C to +55°C (no derating).

TEMPERATURE, STORAGE: −40°C to +85°C

COOLING: Convection.

ISOLATION: The output terminals are isolated from the grounded case. A maximum of 500 volts (d-c or peak) may be connected between either terminal and the case.

CONTROLS: Four (4) 10-position rotary switches select voltage in conjunction with three push button decimal range selectors. A recessed current limit control is accessible through the front panel.

OVERRANGE: 10% overrange on each range; e.g., 1.099V, 10.999V and 109.99 volts (derate current to 0.6 amperes at 109.99 volts).

PROGRAMMING: External switch closures will program the output in a 1-2-4-8 BCD code. This connector is omitted in the model with suffix "G".

CURRENT LIMITING: Recessed multiturn trimmer adjusts t current limiting from 10% to 105% I_O max.

VOLTAGE RECOVERY (for step load current): <50 μsecon for recovery to within 0.005% or 2 mV of setting.

REMOTE ERROR SENSING: Compensates up to 0.5V dr per output lead. Error sensing terminals located on the fro panel.

OVERSHOOT (Turn-on/off): None above 25% voltage settin negligible below 25% when preloaded to 10% minimum.

METERS: Voltage is indicated on a four-digit numerical di play with a fifth-digit overrange. Current on a 2-inch, 2% r cessed ammeter.

TERMINALS: Binding posts on the front panel, plus/minu ground and error sensing. Connections at the rear for outpu error sensing and programming functions.

DIMENSIONS: See dimensional listings on Page 1117.

FINISH: *Panel:* Light gray, Color 26440 per Fed. Std. 595.
Case: Charcoal gray texture.

MOUNTING: Fits RA-24 rack adapter. *See hardware sectior*

Data and prices subject to change without notice.

KEPCO

PROGRAMMER FUNCTION GENERATOR

Model FG 100 — Price: $616.00 — Shp. Wgt. 16 lbs.

odel FG-100 is a precision, slow speed, triangular wave-rm generator capable of generating any repetitive ramp nction. Separately adjustable, high and low limits, are pro-ded which periodically reverse the direction of the inte-ation. The rising rate and falling rate are separately adjust-ble or can be controlled symmetrically with a single control.

UTPUTS: All outputs available simultaneously.
#1 — 0–20V d-c, 0–20 ma.
#2 — 0–10 ma to program 100 ohm/volt power supply.
#3 — 0–1 ma to program 1000 ohm/volt power supply.

NPUT: 105–125V or 210–250V a-c, 50–440 Hz.

IMING: 4 ranges: 0.1V/sec., 1.0V/sec., 10V/sec., 100V/sec. ising and falling slopes continuously adjustable between anges either separately or symmetrically. For outputs #2 nd #3, divide the above timing by 2000 and 20,000 respec-ively to obtain milliamperes per second.

IMITS: Separately adjustable high limit and low limit per-nits operation between any two pre-set voltages or currents.

REVERSING SWITCHES: Programming direction is automat-ically reversed at the high and low limits. In addition, a pair of push buttons are provided which permit the direction to be reversed at any point in the operating span. A pair of directional lamps are provided to show the direction of the ramp.

METER: 2½" edgewise meter monitors output in volts (0–20V a-c) and in percent of maximum output, 0–100%.

PROGRAMMING: Model FG–100 may be used by itself to generate a wide variety of very low speed triangular or saw-tooth functions, or it can be used directly with any pro-grammable d-c power supply. When connected to a pro-grammable power supply, the Model FG-100 Function Gen-erator programs the power supply throughout all or part of its rated voltage or current range as set by the power sup-ply's controls and the function generator's limit settings. NOTE: function speed is converted to programming speed by multiplying the driving current rate (ma/sec.) by the re-sistance setting of the voltage control of the power supply being programmed. This gives the programming speed of the power supply's output in volts per second.

REMOTE CONTROLS: Timing and limit setting controls are brought to a multi-terminal barrier strip at the rear of the unit for remote operation. A sync output is also provided as is provision for remote directional signals.

DIMENSIONS: 4¼"H x 8 5/32"W x 13⅝"D

MOUNTING: Mount single unit in rack adapter RA-5, two abreast in rack adapter RA-4. *See Hardware Section.*

KEPCO VARIABLE RESISTIVE LOAD

Model KT 6212 — Price: $619.00 — Shp. Wgt. 47 lbs.

The Model KT 6212 is a multiganged, eight-section group of dual-wound power rheostats used in the testing of regulated power supplies.

Model KT 6212 consists of two independent gangs of four rheostats apiece, 0-64 ohms and 0-1000 ohms. The rheostats can be switched for parallel, series parallel and series opera-tion. Each rheostat has heavy and light windings so that the maximum load current changes at approximately each third rotation point around the dial.

CONTROLS:
Switches select series and parallel combinations of the four ganged rheostats with the corresponding resistance and cur-rent rating designated by concentric bands.

Each band defines the resistance range for its particular con-nection with zero ohms (maximum current) in the clockwise position. The bands are divided into three sections that cor-respond to the position of the heavy and light windings, re-spectively. The maximum current in each section is shown on the corresponding portion of the band.

FUSING:
Each rheostat in the 0-64 ohm gang is fused at 7 amperes. Each rheostat of the 0-1000 ohm gang is fused for 2 amperes.

TERMINALS:
A pair of 5-way binding posts is provided at each gang for connection to the power source under test. These connec-tions are duplicated at the rear.

EXTERNAL POWER REQUIREMENTS:
None. The Model KT 6212 is a passive device.

DIMENSIONS:
8¾"H x 19"W x 13⅝"D. The Model KT 6212 resistive load is designed for mounting in standard 19" equipment racks.

Data and prices subject to change without notice.
All terms used in the specifications are defined in the Kepco Glossary.

KEPCO DIGITAL PROGRAMMING SYSTEM

DIGITAL PROGRAMMING DECADE

MODEL	DESCRIPTION		COMPANION REGISTER	CABLE TO DPR
DPD–1	4 digit	0–1000.0V	DPR–4	Cable A
DPD–2	4 digit	0–100.00V	DPR–4	Cable B
DPD–3	5 digit	0–1000.00V	DPR–5	Cable A
DPD–4	3 digit	0–1000V	DPR–3	Cable A
DPD–5	3 digit	0–100.0V	DPR–3	Cable B
DPD–6	3 digit	0–10.00V	DPR–3	Cable B
DPD–7	3 digit	Current	DPR–3	Cable B

FUNCTION:
To control the output level (voltage or current) of a d-c Power Supply by means of digitally encoded commands.

OUTPUT RANGE: Each DPD will program 10% overrange and when using the voltage control board has three selectable decimal levels. The largest is shown in the chart; e.g., Model DPD–1, a 4 digit overranging instrument will program: 0–10.999 volts, 0–109.99 volts and 0–1099.9 volts. The DPD–7, a three-digit instrument for the control of current has two selectable decimal levels. A current code board, compatible with the *current rating* of the power supply being controlled, is needed with the DPD–7. Specify the *current code board* when ordering by appending a suffix number to the model equal to the *ampere* rating of the supply being controlled. Specify Model DPD–7–22A for an instru ment to control a 22 ampere power supply. The *current coc board* in Model DPD–7 causes the programmed current t correspond to the numerical display of the companion DPR– Register.

DESCRIPTION: The DPD's use transistor-driven reed relay to actuate resistors in a 1–2–4–8 BCD code. The input parallel (RTL) logic levels or switch closures; the output four-wire resistance and control current command capabi of programming any Kepco Operationally Programmabl Power Supplies. The DPD's may be driven by the suitabl companion DPR which provides serial-parallel conversion data storage and display.

TIMING: Commands to the DPD are sequenced: hold–execut –program, requiring a 10 millisecond sequence time. Thi sequencing is provided by the DPR when used together.

INPUT: logic "0" is 0 to 0.3V d-c
logic "1" is 1 to 3V d-c
input impedance: 3K ohms

POWER REQUIREMENTS:
115V ±10V a-c or 230V ±20V a-c, 50-440 Hz single phase

DIMENSIONS: 5 7/32"H x 8 11/32"W x 12 7/8"D
Rack adapter (Model RA-24) is available)

DIGITAL PROGRAMMING KEYBOARD

Model DPK-1

FUNCTION:
To control the output of a regulated d-c Power Supply wit an adding machine keyboard, through a DPR logic an DPD analog converter. DPK-1 is a manual input — in seria form — for the DPR registers.

DESCRIPTION:
The DPK-1 uses SPDT keys to generate decimal code an register control signals, which are shaped and processe for delivery to the DPR storage register. Model DPK-1 will program registers DPR-3, DPR-4 and DPR-5

COMMANDS:
10 digit decimal signals, 3 ranges, Space, Clear, Start/Print Index, Hold/Advance, Standby/Operate, Preview, Polarity.

POWER: Supplied from DPR.

DIMENSIONS: 4 5/16"H x 8 11/32"W x 7 5/8"D
Rack adapter (Model RA 29-1) available.

DIGITAL PROGRAMMING REGISTER

Model DPR-5

MODEL	NUMBER OF DISPLAY REGISTERS
DPR-3	3 + Overrange
DPR-4	4 + Overrange
DPR-5	5 + Overrange

NCTION: The registers accept inputs of binary coded de- nal programming signals, display and store them; and pro- le a parallel output signal to a DPD decade for the purpose controlling a power supply. The models DPR are used for storage and display of digital input information within a mplete Digital Programming System.

PUTS: Inputs may be provided by a Model DPK-1 Key- ard or other inputs, such as magnetic or punched tape or de generators.

JTPUTS: The DPR's provide parallel output data on 21 es for presentation to a programming decade DPD-1 – DPD- Simultaneously, a separate output is provided at the front nel consisting of a segmented numeric display, decimal int and index indicator. The index indentifies the register it next in line to receive a command.

e DPR provides the logical sequencing of its companion PD for each command change. At the instant of switching, ning signals from the DPR instruct the DPD to "hold" while w command levels are established. This sequenced action events discontinuities in the output.

OWER REQUIREMENTS: 115V a-c ±10V a-c or 230V a-c 20V a-c, 50-440 Hz single phase.

IMENSIONS: 5 7/32"H x 8 11/32"W x 17 3/8"D. Rack mount with lapter RA-24.

NISH: Panel: Light gray, Color 26440 per Fed. Std. 595.
Cover: Charcoal gray texture.

INPUT LINES: (Serial data) Input Impedance: 1.5 k ohms

Decimal format:	10 lines
BCD format:	5 lines, incl. data pulse

SYSTEM OPTIONS and ACCESSORIES

PROGRAM BOARDS		SUPPLIED IN DPD MODELS:						
MODEL	PRICE	–1	–2	–3	–4	–5	–6	–7
PB–10K	$107.00	*		*	*			
PB–1K	81.00	*	*	*	*	*		
PB–100	54.00	*	*	*	*	*	*	*
PB–10	54.00	*	*	*		*	*	*
PB–1	54.00		*	*			*	*

OPTIONAL OFFSET CONTROL: Add suffix "E" to model number, e.g.: DPD–2E for an optional E_{io} (voltage offset) zeroing control. Used to control power supplies that lack zeroing facilities.

PRICE: $50.00

CURRENT CODE BOARDS: Plug into DPD–7 to control current. Board of choice is supplied with DPD–7, specified by appending suffix equal to current rating of supply being programmed, e.g.: DPD–7–15 for 15 amp code board. Additional code boards.

PRICE: $50.00 each

OVERVOLTAGE CROWBARS

MODEL	VOLTS	AMPS	TRIP TIME μSEC	FOR USE WITH	PRICE	SHIP. WGT. (lbs.)
VIP–1	5–200*	30	50	Stand alone, Overvoltage/Current	$142.00	21
VIP–3	5–200*	30	50	Stand alone, Over and Undervoltage/Current	254.00	21
VIP–4	5–50	200	50	Stand alone, Overvoltage/ Current	332.00	21
VP–PX	3–110	3	5–10**	PAX, PCX Model, bolt onto RA 22–6	86.00	3

* Ranges: 5–50V, 50–100V, 100–150V, 150–200V.

** This model incorporates an adjustable trigger delay which allows a closer setting without an excess false alarm rate.

Model VP–PX

The Kepco VIP (stand alone, rack mounted) and VP (bolt-on) protectors are independent voltage monitors complete with their own power supply, reference, comparator and SCR crowbar. A voltage excursion above the static trigger level (or below, in the case of VIP-3, the undervoltage protector) initiates crowbar conduction to clamp the supply terminals. Simultaneously, a power interlock relay (or connection to the power supply's circuit breaker) trips to remove the primary a-c power. Re-set is automatically accomplished when the a-c power is restored.

SENSITIVITY: VIP Models: 1% of the operating voltage or 0.1V

VP Model: 5% of the operating voltage or 0.25 volts, whichever is greater.

VIP-1 &-3 Current Sensitivity: 5% of the operating current producing a 1 volt drop across an external sensing resistor.

TEMPERATURE COEFFICIENT: 0.1% or 0.1V (whichever is greater) per °C.

REMOTE ERROR SENSING: Compensates for up to 1V per output lead.

Model VIP–1

DIMENSIONS: See outline drawings, this section.

FINISH: VIP Panels, light gray, color 26440, per Fed. Std. 5

OPTIONS (Tracking Mode, VIP Models): The VIP may e interconnected with the voltage control of the power sup that it monitors to sense a voltage differential between output of the supply and the programmed voltage. For deta please consult the factory.

KEPCO
HARDWARE AND MOUNTING EQUIPMENT

6-in-a-RACK MOUNTING SYSTEM

The Kepco 6-in-a-rack concept is designed to solve the problem of multiple output, multiple function power supplies. There are eighteen different models available in three styles (PCX—voltage regulators, CC—current regulators and OPS—operational power supplies). Each style is available in the same six volt/ampere combinations: 0—7V @ 2A, 0—15V @ 1.5A, 0—21V @ 1A, 0—40V @ 0.5A, 0—72V @ 0.3A and 0—100V @ 0.2A. Additionally, the PCX models (voltage regulators) and the OPS models (operational power supplies) are made in two mechanical formats. They are available as modules with or without cases or can be ordered in a "laboratory format" with operating panels complete with controls, terminals and (for the PCX) meters. The CC models (current controllers) are available only in the laboratory format with a 10-turn current control, two meters, on-off switch, pilot light, etc. If you want a modular current controller, you would use the OPS module—with current feedback.

The models in laboratory format are identified by a special suffix. For the voltage regulators, the suffix is "MAT," and the model number would read (for example) PCX 21-1MAT. For the operational power supplies, the suffix is "TA," and the model number would read OPS 21—1BTA. The letter "B" in that suffix is part of the regular (module-style) model number, OPS 21—1B.

Four different mounting assemblies are offered for the three laboratory-style groups. Case CA—3 mounts a single unit with built-in printed circuit-to-barrier strip interface, line cord, handle and feet for bench mounting.

Case CA—4 mounts any two units, identical or dissimila with built-in printed circuit-to-barrier strip interfaces for both m dels. It contains a single line cord, handle and bench mounting fe

Case CA—5 mounts any three units, mixed or matched. Con- tains three printed circuit-to-barrier strip interfaces, line ord handle and feet.

RA 22—6 is a 19" wide housing which fits in 5¼" of sta dard rack space and accepts any six units. RA 22—6 does not i lude any PC-to-barrier strip interfaces. Order these separately as odel PC—2. You'll want one Model PC—2 for each unit mounted the RA 22—6. A line cord is supplied which must be bussed t each active PC—2.

In all of these housings, the power supplies mount on rails s that they will slide in and out freely. A set of coding pins are pr ided so that you may uniquely encode each slot for a par ular supply.

The modular style of the PCX and the OPS models as vi l as Kepco's PAX model can be plugged into the various housi s by mounting an uncased module onto a Model BPA—22 slide adapter.

Various filler panels are available to close off unused slots any of the housings.

A simpler rack mounting adapter is available for the case nod- ules: PCX, OPS and the Kepco PAX models. These are l dels RA 12—1 (single), RA 13—4 (4 units) and RA 11—6 (6 its). Mount the cased model by machine screws to these adapte and make input-output connection by means of a PC con ctor Model PC—1.

HARDWARE FOR PLUG-IN MODELS OPS-BTA, PCX-MAT AND CC POWER SUPPLIES. OPS-B, PAX and PCX models can also be mounted using BPA—22 Adapter.

MODEL	DESCRIPTION	SIZE	PRICE	SHIP. WT. (S)
RA 22—6	Six-slot rack housing w/o plug boards*	5 7/32" H x 19" W x 16 3/8"D	$35.00	1

NCLOSURES AND ARDWARE SYSTEMS OR PLUG-IN MODULES

Rear view of the RA 22-6 Housing with one VP-PX Overvoltage Protector mounted (on far left) and 2 PC-2 Connectors installed

PLUG-IN CONNECTOR BOARD Model PC-2
One PC-2 must be ordered for each active slot in the RA 22-6.

6-SLOT RACK HOUSING Model RA 22-6
Complete with line cord and Rear shield (not including PC-2 Connectors)

CC 40-0.5M

PCX 100-0.2MAT

OPS 72-0.3BTA

FILLER PANELS
(supplied without slide assembly and handle), may be used to fill unused slots in CA-3, CA-4, CA-5 and RA 22-6.

MODEL RFP 22-3

MODEL RFP 22-2

MODEL RFP 22-1

BLANK SLIDE ADAPTER Model BPA-22
For mounting accessory equipment. May also be used with standard uncased OPS, PAX and PCX modules for blank panel mounting in RA 22-6, CA-3, CA-4 and CA-5 housings.

SINGLE UNIT HOUSING Model CA-3
Supplied complete with a built-in PC-2 connector. (shown with a PCX 100-0.2MAT plugged-in)

DOUBLE UNIT HOUSING Model CA-4
Supplied complete with a built-in dual PC-2 connector. (shown with a CC 40-0.5M and a BPA-22 plugged-in)

TRIPLE UNIT HOUSING Model CA-5
Supplied complete with a triple PC-2 connector.

Typical rear view of CA-3, showing access terminals and connector.

Typical rear view of CA-4, showing integral connector (Double PC-2) supplied.

All plug-in models and the BPA-22 are supplied with two coding pins that can be arranged in 6 different patterns to key the housing slots.

Folding handle for portability.

Typical rear view of CA-5, showing coding pins, connectors and line cord.

Slot provides access to internal adjustments in mounted supplies.

TOTAL POWER SUPPLY CAPABILITY

MODEL PS 4613

HIGH POWER TWT POWER SUPPLY

INPUT POWER	115 VAC, 400 cps, 3 phase per Mil-Std-704
OUTPUTS	1. Helix-Cathode: −4000 to −4800 VDC adjustable at 40 ma 2. Collector-Cathode: +2750 to +3250 VDC at 400 ma 3. Filament: 6.3 VAC ±2% at 4.0A (10A turn on surge limiting provided) 4. Focus Anode: +100 to +300 VDC at 1 ma
PROTECTIVE CIRCUITRY	1. Automatic time delay 2. Helix overload protection 3. Thermal overload protection 4. Arc protection (all modes of internal TWT arcing)
ENVIRONMENT	1. Temperature −55°C to +71°C ambient (Mounting surface temperature not to exceed 90°C) 2. Altitude: 50,000 feet 3. Shock, Vibration, Humidity, Explosion: Per Mil-Std-810
WEIGHT	20 lbs. maximum

HIGH VOLTAGE DISPLAY TUBE POWER SUPPLY

INPUT VOLTAGE	28 VDC ±10% @ .5 AMP
OUTPUTS	1. 20KV ±1000 VDC @ 200 μA Ripple 20 V Peak to Peak max Load Reg 3% max, full to half load 2. 2.2 KV ±500 VDC adjustable @ 75 μA Ripple 2.2 V Peak to Peak max 3. 300 V ±15 VDC @ 10 μA Ripple 300 mv Peak to Peak max
SIZE	5.50 x 4.5 x 2.6
WEIGHT	3.3 Lbs max
ENVIRONMENT	MIL-E-5400 Class 2

MODEL PS 4701

MODEL PS 4621

MULTI-GRID, LOW NOISE TWT POWER SUPPLY

INPUT VOLTAGE	103 – 127 VAC @ 50 – 420 H_z
EFFICIENCY	40% min
OUTPUTS	1. 2750 – 2850 @ 1 MA 3.5 – 3.8 VDC @ 1 AMP 2. 6 additional grids above the Cathode and 1 below 3. Max Ripple 200 mv all outputs 4. 1% Regulation
SIZE	5 x 3 x 11
WEIGHT	6 Lbs max
ENVIRONMENTAL	MIL-E-5400 Class 2

COMPUTER LOGIC POWER SUPPLY

INPUT	115 VAC, 400 H_z, 3 phase, per MIL-Std-704
OUTPUTS	+28 Volts @ 6 amps −15 Volts @ 5 amps +15 Volts @ 5 amps -- 5 Volts @ 5 amps
REGULATION	±1% line, load and temperature
RIPPLE	25 mv Peak to Peak
PROTECTIVE CIRCUITRY	1. Output protection from short circuits for indefinite period without damage. 2. Over voltage—in the event of regulation failure, supplies are terminated in less than 20 microseconds. 3. Overload—supply is protected to prevent damage resulting from overloading in any one of the outputs.
ENVIRONMENT	1. Temperature −55°C to + 71°C 2. Altitude 50,000 feet 3. Shock, Vibration, Humidity and Explosion per MIL-Std-810 4. Electromagnetic Interference per MIL-1-6181

KILOVOLT CORPORATION

HIGH VOLTAG

POWER SUPPLIES • INSULATION TEST
ACCESSORIES • POWER PACKS

A pioneer in high voltage techniques, KILOVOLT CORPORATION designs an m factures a wide variety of power supplies and insulation testers and pow p ranging from 1,000 to 1,000,000 volts. These units are soundly en e ruggedly constructed and conservatively rated. Units are custom designe o types of industrial processing as well as experimental laboratory work.

In addition, KILOVOLT CORPORATION can furnish anti-corona hardware isolating resistors, high voltage voltmeters and high voltage spark gaps. check us for all your high voltage requirements.

HIGH VOLTAGE D.C. POWER SUPPLIES FOR INDU

FEATURES

- Reversible Polarity Output (most models)
- Continuously Variable Output Control
- Adjustable Over-Current Shut-Off
- Adjustable Over-Voltage Shut-off
- Safety Interlock on H.V. Cabinet Door
- Zero-Start Interlock
- Dual Range Voltage and Curre
- Fail-Safe Output Shorting Mech
- Circuit-Breaker Operation
- Functional Pilot Lamps
- Surge Limiting Resistor
- External Interlock

ELECTRO-MECHANICAL REGULATION. The above models may be ordered with either voltage regulation, current regulation, or both by means of a servo regulating system.

SATURABLE REACTOR CONSTANT CURRENT. By use of a saturable reactor in conjunction with any of the standard models above, the output current can be held constant to within approximately 10% of the preset level for load variations from short circuit to full load and to within 3% for a half-load to full load change.

REGULATED HIGH VOLTAGE D.C. POWER SUPPLIES

Highly regulated against input line variations or changes in load, these power supplies employ fast response electronic regulation.

FEATURES

- Continuously Variable Output
- Overload Protection
- Zero-Start Interlock
- Cabinet Interlock
- Provisions for External Interlock
- Reversible Polarity Output (most models)
- Circuit Breaker Operation
- Monitoring Pilot Lamps
- Electronically Protected 4½" Meters

HIGH VOLTAGE D.C. POWER PACKS

These units are high voltage sections of standard power supplies minus meters and controls and contain the basic components described for standard power supplies — filter system, fail-safe mechanism, surge resistor, meter multiplier, primary gaps, etc.

HIGH VOLTAGE HARDWARE AND ACCESSORIES

MULTIPLIERS AND DIVIDERS. High voltage resistance strings, accurate to 0.15% or better with division ratios which may be specified. Stability is 25 PPM/°C; current drain 1 ma. Accuracy traceable to NBS standards as an option.

ELECTRONIC CROWBAR designed to protect Klystron or other sensitive loads from damage by discharge of power supply energy can be manufactured into your custom-built power supply or provided as separate devices. A typical unit has a response time of 3-5 microseconds and is capable of discharging five microfarads in approximately one millisecond at 20 KV.

CALIBRATED SPARK GAPS provided with micrometer calibration and may be used for determining crest voltage.

HIGH VOLTAGE OUTPUT BUSHING. Oil filled and terminated with anti-corona toroids, these devices are designed for oil-to-air outlet of very high voltages; available in two ratings, 300 and 600 KV D.C.

Call or write for a copy of our latest catalog.

LaMARCHE

INVERTERS POWER SUPPLIES

DC to AC Power Source with Regulated Sine Wave Output

DESCRIPTION

The La Marche MODEL A-51 is a completely solid state SCR inverter which provides a regulated, sine wave output for such applications as:

- Boiler Controls
- Telephone and Microwave Communications
- Burglar Alarms
- Supervisory Control Equipment
- Data Processing and Telemetering Equipment
- Nuclear and Missile Installations
- P.A. Systems
- Fire Alarms

SPECIFICATIONS

AC OUTPUT VOLTAGE ..... 120 Volts Nominal
LINE REGULATION ..... ±1% for ±15% DC Change
LOAD REGULATION ..... ±2% No Load to Full Load
FREQUENCY ..... 60 Cycle Nominal
FREQUENCY STABILITY ..... ±1% for Load, Input Voltage and Temperature Variations
WAVE SHAPE ..... Sine Wave
DISTORTION ..... Approximately 7%
OVERALL EFFICIENCY ..... Approximately 65%
AMBIENT TEMPERATURE ..... −20° to 60°C (0° to 140°F)

FILTERED D.C. POWER SUPPLIES

MODEL A-26

DESIGN FEATURES

1. Automatic in operation and self-regulating.
2. No moving parts. Nothing to arc or wear out.
3. No external controls. Cannot be tampered with.

The La Marche A-26 power supply features automatic load regulation and semi-automatic current limiting. The model A-26 is filtered to 10% ripple. There are no controls to be set for different applications because the amount of loading determines the current output.

The La Marche model A-26, like all La Marche units, is a solid state device employing a balanced isolation power transformer, a magnetic amplifier and sealed silicon diode rectifiers. These power supplies have no contacts, relays, switches, fans, tubes, time clocks or other moving parts.

MODEL A-28

DESIGN FEATURES

- Silicon diode rectifiers.
- Current limiting circuit.
- Automatic A.C. voltage compensation.
- D.C. voltage regulation.
- Output ammeter and voltmeter.

The model (A-28) is a solid state, fully automatic, constant voltage D.C. power supply designed for all regulated applications.

Standard features include automatic A.C. line compensation, D.C. voltage regulation and current limiting. The La Marche transistor controlled magnetic amplifier circuit is designed to automatically provide a D.C. output regulation of ±5″ from no load to full rated output. Accurate output regulation is maintained with A.C. line variations of ±10%. The A-28 is offered in a wide range of sizes and voltages.

The reliability of the La Marche circuit has led to its selection for critical communication and control systems, nuclear powered ships, missile firing stations, and utility power standby systems.

MODEL A-29

ORDER SPECIFICAT

1. La Marche mode
2. A.C. input voltag phase
3. Intermittent D. and duration
4. Continuous D.C.
5. Amount of filter measured how?

The model (A-29) is a solid state, fully a constant voltage D.C. power supply design regulated applications.

Standard features include automatic A.C. pensation, D.C. voltage regulation and limiting. The La Marche transistor contro netic amplifier circuit is designed to auto provide a D.C. output regulation of ±1% load to full rated output. Accurate outputs is maintained with A.C. line variations o The A-29 is offered in a wide range of voltages.

The reliability of the La Marche circuit h its selection for critical communication an systems, nuclear powered ships, missile f tions, and utility power standby systems.

FLOAT BATTERY CHARGERS

LaMARCHE

GENERAL DESCRIPTION

The model A-11 Float Battery Charger is a completely automatic, solid state, constant voltage device having:

A.C. VOLTAGE COMPENSATION — D.C. VOLTAGE REGULATION — CURRENT LIMITING

The model (A-11) charger is designed and built to carry continuous and intermittent loads up to its maximum rated output. The A-11 is current limited at 140% of rated output. Each unit is designed and built to charge a specific type of battery containing a specific number of cells.

The La Marche Transistor Controlled magnetic-amplifier circuits provide continuous taper charging. Maintains rated output voltage within ±1% from no load to full load with A.C. input variations of ±10%. Silicon diodes are used for rectification.

The model A-11 charger floats lead-acid batteries at 2.17 volts per cell and by means of a front panel switch equalizes at 2.33 volts per cell. Both float and equalize voltages are adjustable to meet battery manufacturers recommendations. This type of charging imparts the longest battery life and is the accepted method for charging batteries used in standby service.

ESIGN FEATURES

Quality parts throughout. Silicon diode rectifiers and transistor magnetic amplifiers used exclusively.
A.C. power loss relay, output voltmeter/ammeter and fused input-output are standard on all models.
Eighty sizes available in five input voltages.
4. Adjustable equalize and float levels; float/equalize controls located on face panel for easy operation.
5. Design and operation tested and approved by battery manufacturers, utilities, railroads and military.

PECIFICATIONS

ANDARD ACCESSORIES SUPPLIED:

Potentiometer for desired float and equalize charge voltage adjustments.
Quality D.C. ammeter and voltmeter with 50 millivolt movement, 2% accuracy.
Power failure relay with terminals for connections to a remote alarm system.
4. Fused A.C. input and D.C. output for complete protection.
5. Convenient switch to transfer from float charge to high rate equalize charge.
6. Internal terminal board for easy connection of A.C. input, D.C. output and power failure equipment.

PTIONAL ACCESSORIES:

. A.C. circuit breaker replacing fuse.
. 0-24 hour equalizing timer.
. Ground detection switch.
. Low D.C. voltage alarm relay.
. High D.C. voltage alarm relay.
. Special paint.
. Export packing add 5%.
8. Individual float/equalize adjustments, specify model A-11B.
9. Filtered units available, see model A-12.
10. Dual fusing for A.C. input and D.C. output replacing single input and output fusing.
11. Dual voltage A.C. input.
12. 1% taut band meters replacing 2% meters.
13. Relay rack mounting.

New LCS-A power package... LC Series IC regulated modular power supplies

LC series power supplies are listed in Underwriters' Laboratories Recognized Components Index.

Five package sizes
Single and dual outputs
0.01% regulation line or load
250 μv rms ripple

Features

All-silicon DC power supply using integrated circuits to provide regulation system
except for input and output capacitors, rectifiers and series regulation transistors

Increased reliability
through use of integrated circuit which replaces 32 discrete components from conventional designs

Convection cooled
no external heat sinking required

Regulation
line or load .01% + 1mv

Ripple and noise
250 μv rms; 1mv p-to-p

Wide input voltage and frequency range
105-132 vac, 47-440Hz
derate current 10% for 47-53Hz operation, except for LCS-1 series (see listing). For 360-440Hz operation consult factory.

Wide temperature range
−20°C to +71°C

Temperature coefficient
.01% + 300μv/°C external programing resistor
.015% + 300μv/°C internal programing resistor

Remote programing
1000 ohm/v nominal or volt/volt

Remote sensing

Automatic current limiting

Series/parallel operation
with similar single or dual units

Multi-current-rated

More current per cubic inch

Complete serviceability

Overvoltage protection
available as accessory up to 70 vdc

No overshoot
on turn-on, turn-off or power failure

AC input option
add suffix "-V" to model number for operation at 205-265 v 47-440Hz, except LCS-1 and LCS-A series. Derate current 1 for 47-53Hz operation. For 360-440Hz operation consult f tory. In U. S. and Canada, add 10% or $10.00 to price, whic ever is greater.

Features of dual output models

Independent operation

Independent remote programing

Independent remote sensing

Each supply electrically isolated
and floating with respect to ground

Commercial contract plan
available for OEM and large-volume users contact local sal engineer for details.

C eries voltage and current ratings

NOTES: (1) For operation at 360-440Hz, consult factory for ratings and specifications.
(2) All prices FOB Melville, N. Y. All prices and specifications subject to change without notice.

Now from Lambda. Military I-C regulated power supplies & transformer

The only MIL supply available with 5 year guarantee
0-7, -18, -32, -60, -120 vdc, currents to 550 ma
400 Hz and 60 Hz operation
regulation 0.01%, ripple and noise 1mv rms

All models designed and tested to meet performance specifications of
MIL-STD-810B, -454, -461, -462, -463
MIL-E-5272C, MIL-E-16400F, MIL-E-4158D, and MIL-E-5400K

All-silicon DC power supply using integrated circuits to provide regulation system
except for input and output capacitors, rectifiers and series regulation transistors

Increased reliability
through use of integrated circuit which replaces 32 discrete components from conventional designs

Convection cooled
no external heat sinking required

Regulation
line or load .01% + 1 mv

Ripple and noise
1 mv rms

Wide input voltage and frequency range
MIL-E models 102-124 vac, 360-440 Hz as per MIL-STD-704A, Class B. MIL-S models 105-132 vac, 57-63 Hz

Wide storage temp. range
−62°C to + 85°C

Temperature coefficient
.01% + 300 μv/°C external programing resistor.
.015% + 300 μv/°C internal resistor.

Overvoltage protection
available as accessory up to 70 vdc

More current per cubic inch

Remote programing
1000 ohm/v nominal or volt/volt

Series/parallel operation
with similar single or dual units

Completely protected
automatic current limiting

Remote sensing

No overshoot
on turn-on, turn-off or power failure

Features of dual output models

Independent operation

Independent remote sensing

Independent remote programing

Series/parallel operation (master/slave)

Each supply electrically isolated
and floating with respect to ground

One day delivery—all models

Guaranteed for five years material and labor

A Veeco Company

LAMBDA ELECTRONICS CORP.

515 BROAD HOLLOW ROAD, MELVILLE, L.I., N.Y. 11746
TEL. 516-694-4200, TWX: 510-224-6484
CABLE: LAMBDATRON, MELVILLE, N.Y.

Only Lambda's power supplies are listed in Underwriters' Laboratories Recognized Component Index

LM series: up to 150 volts, up to 33 amps

All silicon semiconductors

Convection cooled
no external heat sinking required

Regulation
line .05% + 4mv
load .03% + 3mv, no load to full load

Ripple and noise
1mv rms; 3mv p-to-p

Wide input voltage and frequency range
105-132 vac, 45-65 Hz, 40°C rating not applicable for 50 Hz operation

Wide operating temperature range
—20°C to + 71°C

Temperature coefficient
.03%/°C

Multi-current-rated

Complete serviceability
all components replaceable

Remote sensing

No voltage spikes or overshoot
on turn-on, turn-off or power failure

Remote programing
200 ohms/v nominal

Completely protected
automatic current limiting and self-resetting thermostats

Overvoltage protection
available as accessory up to 70vdc

Finish
grey, FED. STD. 595 No. 26081

Mounting
three surfaces for A, B, C, CC and D packages,
One surface for E and EE packages.

High performance option
All models available with these specifications at $15.00 surcharge:
line regulation .01% + 1 mv
load regulation .02% + 2 mv
ripple and noise 0.5mv rms; 1.5 mv p-to-p with 60 Hz input
temp. coeff. 01%/°C

AC input option
add suffix "-V" to model number for 205-265 vdc operation, (40°C rating not applicable), and in U.S. and Canada add $10.00 or 10% extra to the price, whichever is greater.

Fungus proofing option
add suffix "-R" to model number and $10.00 to price to obtain MIL-V-173 varnish on all fungi nutrient components.

Lambda is its own distributor

Lambda offers you 7 package sizes in these modular power supplies

A module
up to 120 volts • up to 2.0 amps

B module
up to 150 volts • up to 3.8 amps

C module
up to 150 volts • up to 5.3 amps

CC module
up to 150 volts • up to 11.0 amps

D module
up to 150 volts • up to 13.1 amps

E module
up to 150 volts • up to 22.0 amps

EE module
up to 150 volts • up to 33 amps

OVERVOLTAGE PROTECTION

Built-in overvoltage protection is standard on all package H models and available as an option on all package F and G models up to 70 VDC. To order for F and G packages, add suffix "-OV" to model number and add $90.00 to price. Price of package H models includes overvoltage protection.

PRICES OF F AND G PACKAGES ARE FOR NON-METERED MODELS, EXCEPT FOR MODEL NUMBERS FOLLOWED BY SUFFIX "M" FOR METERED MODELS ADD SUFFIX "M" TO MODEL NUMBER AND $30.00 TO PRICE.

PACKAGE H MODELS ARE AVAILABLE ONLY WITH OVERVOLTAGE PROTECTION. HIGH PERFORMANCE OPTION, AND METERS ALL OF WHICH ARE INCLUDED IN THE PRICE.

all LM series power supplies are listed in nderwriters' Laboratories Recognized Components Index.

Guaranteed for five years material and labor

New LXD-3-152 tracking dual output power supply designed to power operational amplifiers

+ and − (12 to 15 vdc) at 400 ma dc series-connected dual outputs
0.1% regulation, 1.5 mv rms ripple

only $85.

Model LXD-3-152 tracking dual output power supply

Features

Tracking accuracy
1 absolute voltage difference; 0.1% change for all conditions of line, load and temperature

All-silicon dc power supply using integrated circuits to provide regulation system
except for input and output capacitors, rectifiers and series regulation transistors.

Convection cooled
no external heat sinking or forced air required

Increased reliability
through use of integrated circuits which replace discrete components from conventional designs.

Regulation
0.1% line or load

Ripple and noise
1.5 mv rms; 5 mv p-to-p

Wide input voltage and frequency range
105-132 vac, 57-63 Hz

Wide temperature range
0°C to +71°C

Temperature coefficient
0.03%/°C

Remote sensing

Fixed current limiting

Multi-current-rated

Complete serviceability

Overvoltage protection
requires only one OV accessory for both outputs
LC-OV-11 . . . . $20.00

No overshoot
on turn-on, turn-off or power failure

Outputs
positive, negative and common

Commercial contract plan
available for OEM and large-volume users. Contact local sales engineer for details.

LXD-3-152	24-30	400	370	340	300	$85

NOTES: (1) For operation at other than 57-63 Hz, consult factory for ratings and specifications.
(2) All prices FOB Melville, N. Y. All prices and specifications subject to change without notice.

Lambda has over 10,000 power supply units on-the-shelf for 1-day delivery. Every one is fully guaranteed for 5 years... material and labor.

New high efficiency LV series modular power supplies designed to power TTL, ECL, RTL, DTL and HTL logic

0.15% regulation line or load. Less than 10 mv rms ripple. Convection cooled—no blowers. Built-in overvoltage protection standard.

Package E
Up to 6 volts
Up to 47 amps

Package EE
Up to 15 volts
Up to 92 amps

Package G
Up to 15 volts
Up to 170 amps

Features

Efficiency
greater than 50%, with advanced SCR circuitry

All silicon semiconductors

Convection cooled
no external heat sinking or forced air required

Regulation
line 0.15% + 10 mv for line variations from 105-132 vac.
load 0.15% + 10 mv, no load to full load or full load to no load.

Low ripple
10 mv rms, max., with electronic ripple reducer

AC input voltage
105-132 vac, 57-63 Hz

Temperature coefficient
.03% + 0.5 mv/°C

Ambient temperature range
0°C to +71°C operating
−55°C to +85°C, storage

Thermally protected and short-circuit proof
current limiting circuit and self-resetting thermostats protect supplies.

No voltage spikes or overshoot
on turn-on, turn-off or power failure

Remote programming
200 ohms/v nominal, or volt/volt

Remote sensing

Multi-current-rated

Series / parallel operation

Complete serviceability
all components replaceable

Overvoltage protection
built-in, continuously adjustable overvoltage protection crow bars output when trip level is exceeded. Included on all models

Overload protection
THERMAL
thermostat: automatic reset of thermostat on all models whe overtemperature condition is eliminated; on EE and G packages, ON-OFF circuit breaker must be manually rese
ELECTRICAL
external overload protection: fixed, automatic electronic cur rent limiting circuit limits the output current upon externa overloads, including short circuit, thereby providing pro tection for load as well as power supply.

Mounting
one surface with tapped mounting holes for E and EE pack ages; package G is rack mounted.

Input connections
heavy duty terminal block on rear of chassis

Output connections
heavy duty studs on rear of chassis

Controls
DC OUTPUT CONTROL
screwdriver voltage adjustment over entire voltage range
OVERVOLTAGE PROTECTOR CONTROL
screwdriver adjustment covers entire operating range

Remote Sensing
to eliminate effect of power output lead resistance on dc reg ulation.

Lambda has over 10,000 power supply units on-the-shelf for 1-day delivery. Every one is fully guaranteed for 5 years... material and labor.

Lambda multiple output power supply systems... assembled from standard components available from stock.

Assemble complete power supply systems to meet your specific need with *standard* Lambda component power supplies and accessories.

Here's an easy way to get multiple-output, power-supply systems with all the advantages of custom-designed systems, but without long delays and high costs. Lambda's new Power Supply Assembly Concept makes custom-design systems obsolete... greatly simplifies your job. You simply select from more than 260 component power supplies and assemble your system with standard accessories. Or let Lambda do the assembly for you at a modest charge.

Lambda, through the 14 power packages of the LC/LM power components, can supply voltages to 150 vdc and currents to 33 amps dc to fit any application. With 4 standard rack sizes Lambda can supply up to 16 different outputs per rack.

Select rack adapter, hassis slides optional.

sert the selected cables.

Add the power modules.

Mount and plug in the Systems Metering Panel.

g in and mount the appropriate ys ns Control Panels and blank panels.

The complete multiple-output stem has now been assembled.

Here's all you do:

1. List your individual voltage and current requirements.
2. Select the power modules you need for proper voltages and currents... remember you can series/parallel units.
3. Select the Systems Power Protector or Systems Power Sequencer if required.
4. Select the overvoltage protection units required.
5. Select the smallest rack adapter that will house your modules.
6. Select the necessary power control panels and metering panel.
7. Select all the required cables.
8. Select blank panels.
9. Order all the power supplies and accessories needed to assemble your system. If you prefer, Lambda will assemble the system for you. The cost for Lambda to assemble your system is 5% of the total cost of all the power supplies and accessories in the system.

How to use this brochure to design your power supply system.

Lambda has four standard rack adapters for use in assembling the power supply systems that meet your needs. These are standard 19-inch rack adapters with different height and depth dimensions as follows:

1¾"h x 14"d, 3½"h x 14"d, 5¼"h x 14"d, 5¼"h x 21"d.

The assemblies of power supply systems for each of these racks are described beginning on pages 4, 8, 12 and 16, respectively.

Once you have selected the power supply units to meet your voltage and current requirements, the dimensions of the individual power supply modules and the number of modules you require will determine the minimum rack adapter size you can use. Then turn to the pages describing this rack adapter for details on the accessories you need for that size assembly. Page 7 is a ready reference for various power supply combinations that might be used in the different rack adapters.

PACKAGE 1
up to 120 volts • up to 275ma

PACKAGE 2
up to 120 volts • up to 550ma
single and dual outputs

PACKAGE 3
up to 60 volts • up to 1.2 amps
single and dual outputs

PACKAGE A
up to 120 volts • up to 2.0 amps
single and dual outputs

PACKAGE B
up to 150 volts • up to 3.8 amps

PACKAGE 4
up to 150 volts • up to 4.5 amps
single and dual outputs

PACKAGE C
up to 150 volts • up to 5.3 amps

PACKAGE CC
up to 150 volts • up to 11.0 amps

PACKAGE D
up to 150 volts • up to 13.1 amps

PACKAGE E
up to 150 volts • up to 22.0 amps

PACKAGE EE
up to 150 volts • up to 33.0 amps

SELECT POWER MODULES FROM THESE PACKAGE SIZES IN THE LC/LM SERIES.

Now you can get a multiple output power supply system by assembling standard Lambda components, available from stock

Lambda has over 10,000 power supply units on-the-shelf for 1-day delivery.

Every one fully guaranteed for 5 years... material and labor.

LAMBDA
ELECTRONICS CORP.
A (Vanco) Company

Now from Lambda. Systems Power Sequencer

sequences voltage ON and OFF, monitors voltage status, protects against ac input line voltage faults, undervoltage and overvoltage

Controls up to 8 power supplies
sequences ON up to 8 power supplies in pre-determined sequence and sequences them OFF in mirror image.

Turn ON sequence incomplete
incomplete sequence causes all output voltages to be crowbarred.

Turn OFF sequence failure
protect system overrides and causes all voltages to be crowbarred.

Monitors
power supply overvoltage and undervoltage and ac input line voltage simultaneously.

Protects against ac input line voltage faults
power failure causes all output voltages to be crowbarred.

Protects against undervoltage
one fault can result in all output voltages crowbarring (w optional disable).

Protects against overvoltage
one fault causes all output voltages to be crowbarred.

Dry contact closure interlock
available for each power supply at the input/output connec Loss of interlock causes all output voltages to be crowbar

Logic-level signal alerts associated equipment
logic-level signal is provided to indicate failure. It precedes output voltage crowbar.

Fault signal indicates an output voltage fault
fault-signal output signal, a pulse train, is provided when out voltage fault occurs. An indicator light gives visual indication the front panel of models SPS-92, SPS-94, SPS-96 and SPS-

Lambda's System Power Protector

The Systems Power Protector is another Lambda control unit having all the functions of the Systems Power Sequencer with the exception of voltage sequencing, square-wave failure alarm, and two-wire external interlock. It provides complete fault protection at substantially lower cost.

Notes: 1. Overvoltage protectors must be used with each power supply to utilize the overvoltage a undervoltage functions of the Power Sequencer or Power Protector.
2. All power supplies of the LC/LM series to be used with the Systems Power Sequencer, cept zero-voltage units, must be specified with the "-S" option. Also, all overvoltage p tectors must be specified with the "-S" option. Simply add the suffix "-S" to the applica power supply model number or overvoltage protector if it is to be used with the Syste Power Sequencer and to all overvoltage protectors used with the Systems Power Protect
3. The Systems Power Protector and the Systems Power Sequencer can be used with Lamb power supplies furnishing up to 70 vdc. For applications above 70 vdc, consult factory.
4. All prices F.O.B. Melville, N. Y. All prices and specifications are subject to change with notice.

5 Year Guarantee

New IC regulated bench power supply with built-in, tracking overvoltage protection

0-10 volts, 1 amp, $90 with OV
0-10 volts, 1 amp, $75 less OV

Also available 0-20, 0-40, 0-120 vdc

Regulation
line 0.01% + 1mv
load 4 mv

Ripple and noise
250 μv rms; 1 mv p-to-p

A silicon DC power supply using integrated circuits to provide regulation system
except for input and output capacitors, rectifiers and series regulation transistors

Multi-position operation
lies flat or stands erect

AC input
105-132 vac 47-440 Hz (Current ratings based on 57-63 Hz.)

Weight
less than 5 lbs.

Output
5-way binding posts

Ambient operating temperature
0—50°C

Temperature coefficient
0.015% + 300 μv/°C

Adjustable current limiting
0% to 110% of rating

Storage temperature
—40°C to +85°C

Convection cooled

Die-cast aluminum construction

No overshoot
on turn-on, turn-off or power failure

Controls
coarse voltage adjust, fine voltage adjust, current adjust, ON/OFF switch, meter function switch.

Indicators
power ON light and dual-function meter

Guaranteed for 5 years material and labor

LL series bench-type supply 5⅝" x 5½" x 3⅞"

Model	ADJ. VOLT RANGE VDC	CURRENT RANGE(1)	Price(2)

NOTES:
(1) Consult factory for operation at 50 Hz or temperatures above 50°C. Ratings apply 0-50°C.
(2) Independently adjustable OV protection available as accessory on LL-901, 902 (LC-OV-10, range 3-24 vdc) and LL-903 (LC-OV-11. range 3-47 vdc) price $20.
(3) All prices F.O.B. Melville, N. Y. All prices and specifications subject to change without notice.

LL series I-C regulated power supply

Lambda Electronics Corp., 515 Broad Hollow Road, Melville, L. I., New York 11746 • Tel. 516-694-4200.

Lambda's LPD series offer more amps per $ than any other general-purpose dual lab supply.

also available with single output...LP series

Features of LPD series dual output power supply

5 models with two independent DC outputs
up to ±250 vdc, up to 1.7 amps. Either output may be + or −, or both outputs may be + or −.

Series/parallel operation
of both outputs yields two times the voltage or two times the current—up to 500 volts or up to 3.4 amps.

Auto series/auto parallel (master-slave)
permits tracking to a common reference.

4 meters
provide simultaneous monitoring of both voltage and current.

Regulation
line or load .01% + 1 mv.

Ripple
500 μv rms (1.5 mv p-p)

A-C input
105-132 vac 47-440 Hz (ratings based on 57-63 Hz operation). For operation at 205-265 vac, add suffix "-V" to model numbers and 10% or $25.00 (whichever is greater) to price.

Multi-current-rated

Additional features of LP and LPD series

All silicon semiconductors
Bench or rack use
Remotely programable
Remote sensing
Continuously variable
Designed to meet RFI per MIL-STD-826A

Fungus-proofing option
add suffix "R" to model number and add $15.00 to price

Overvoltage protection
available as an option up to 70 vdc

LPD dual output models 5 3/16" x 8 3/8" x 10

LS series is two instruments in one
Expand the capability of your laboratory

With this plug-in

it becomes a high precision power differential voltmeter

LS power source

ONE DAY DELIVERY ALL MODELS

With this plug-in

it becomes a metered high precision power supply

FEATURES OF THE HIGH PRECISION POWER DIFFERENTIAL VOLTMETER

- **Draw power as you measure voltage...** The first and only differential voltmeter to furnish high stability power output while being used as a voltmeter... no need for a separate power supply.
- **Plus all power supply specifications**

FEATURES OF THE METERED HIGH PRECISION POWER SOURCE

- **.005% plus 100μV Regulation** — best of any high stability power supply in this price range.
- **Ripple** — 35μV rms; 100μV p-p.
- **Accuracy** — 0.01% + 1mV.
- **Meters** — monitor both voltage and current simultaneously and continuously.
- **Price the power** — in a convenient 5-rack package.

- **Guaranteed for 5 years** — the only 5-year guarantee that includes labor as well as parts. Guarantee applies to operation at full published specifications at end of 5 years.

- **Multi-Current-Rated** — for 30°C, 40°C, 50°C, 60°C — Covers temperatures most often encountered in laboratory work.
- **5 Models** — with ranges of 0-10, 0-20, 0-40, 0-120, 0-250VDC—Wide selection of ranges to suit your specific needs.
- **Illuminated digital readout** — 5-digital voltage dials provide convenient precise adjustment (200μV resolution over entire range).
- **Only 5¼" high**—convenient half-rack size for rack or bench use.
- **Stability** — 0.001% + 100μV for 8 hours.
- **All silicon-designed for maximum reliability.**

- **Convection-cooled** — no blowers, no external heat sinks.
- **Remote programing**—by changes in voltage or resistance for convenience in systems, test equipment and automatic equipment applications.
- **Auto Series/Auto Parallel** — with Master-Slave tracking.
- **Constant voltage/Constant current.**
- **Completely protected** — short-circuit proof; continuously adjustable automatic current limiting.
- **Overvoltage protection**—available as low cost add-on accessory.
- **Rubber feet** — provided for bench use.
- **AC Input** — 105-132VAC, 47-440 Hz (derate dc output current 10% at 50 Hz) 205-265VAC at extra charge. ("-V" option)
- **Fungus Proofing Option**—Add suffix "R" to model number and add $20.00 to price

- **Mount in Rack Adapters**—LRA-1 ($60.00) or LRA-2 ($35.00). Rack adapter LRA-1 only is available with chassis slides mounted. Add suffix "CS" to rack adapter model number and $50 to price.

New higher-rated power supplies for test equipment and lab use 0-20V, 3.3 amps and 0-40V, 1.8 amps.

Lambda models LH-121B and LH-124B.

All silicon semiconductors
for maximum reliability

Convection cooled
no blowers, no external heat sinks

Regulation
.015% or 1 mv (line or load)

Ripple
250 μv RMS

AC input
105-135 VAC (models with suffix B—105-132 VAC), 45-480 Hz. For operation at 205-265 VAC, add suffix "-V" to model number and add 10% or $25.00 (whichever is greater) to the price.

No voltage spikes or overshoot
on "turn-on", "turn-off" or power failure.

Temperature coefficient
0.015% + 0.5mv/°C.

Series/parallel operation

Completely protected
Short circuit proof; continuously adjustable automatic current limiting.

Constant voltage/constant current

Remotely programable
200 ohms/volt, or volt/volt

Meet Mil. environment specs.

LK-342A, 343A	LH-OV-5	3-47 VDC	35
LK-344A, 345A	LH-OV-6	3-70 VDC	35
LK-350-352	Overvoltage Protection up to 70 VDC as a built-in option for full-rack models. To order, add suffix (-OV) and add $90.00 to price of models LK-350–352, add $120.00 for models LK-360-FM–362-FM.		
LK-360 FM-362 FM			

NOTES:

1 Current rating applies over entire voltage range.
2 Prices are for non-metered models. For metered models, add suffix (-FM) and add $30.00 to price. Models LK-360-FM, LK-361-FM, and LK-362-FM which are metered models not available without meters.
3 Chassis Slides for full rack models: Add suffix (-CS) to model number and add $60.00 to the price, except for models LK-360-FM–LK-362-FM, for which add $100.00.

LAMBDA ELECTRONICS CORP
515 BROAD HOLLOW ROAD, MELVILLE, L.I., N.Y. 117

CABLE: LAMBDATRON, MELVILLE, N.Y.

To get a high-current power supply with 80% efficiency ...get Lambda's LB Series.

Convection-cooled 7-inch panel
Only 10 mv ripple, up to 300 volts; up to 300 amps.

Up to 80% efficiency

Low ripple
10 mv rms max.

Regulation
line .05% + 6 mv.
load 0.1% + 10 mv.

AC input
208 ± 10% vac: 57-63 Hz, 3 phase 4 wire.

All silicon semiconductors
for maximum reliability

Convection cooled
no blowers, no external heat sinks

Overvoltage protection
standard on all models up to 70 vdc

Remotely programable

Remote sensing

Transformer
designed to MIL-T-27C Grade 6

Completely protected
Short circuit proof. Continuously adjustable automatic current limiting.

Constant voltage/constant current
by automatic crossover

Temperature coefficient
0.03% + 0.5 mv/°C

Series/parallel operation

Multi-current-rated

LB Series, metered, full-rack

Size: 7" x 19" x 20 1/16"

Model	VOLTAGE RANGE	MAX. CURRENT (AMPS) AT AMBIENT OF: (1) 40°C	50°C	60°C	71°C	Price (2)
LB-701-FM-OV	0-7.5	300	270	235	200	$1,450
LB-702-FM-OV	0-15	180	170	160	150	1,450
LB-703-FM-OV	0-36	80	75	70	65	1,200

MACARR, INC.

Specialists in Reliable State-of-the-Art Static Power & Control Equipment

BATTERY SERVICE AND ANALYSIS EQUIPMENT

Complete line of units for testing, evaluation, and maintenance of all types of batteries (nickel cadmium, silver zinc, lead acid, silver cadmium, etc.), in all ratings.

Standard and Custom Units for Industrial and Military Applications.

Model 50 Cell-Scanner Individual Cell Performance Tested Automatically. 19 Cells — Adjustable Failure Voltage 0.5 to 2.0 Volts. Model 50 A — 23 Cells.

ANDAC Battery Charger, Discharger, Analyzer. Model 12-30. 1-101 0-30 V, 0-30 A.

COMPLETE LINE OF BATTERY CHARGING EQUIPMENT

High performance chargers for use with aircraft batteries, all types of Alkaline batteries, fork lift truck batteries, central station and microwave station batteries, etc.

Standard and Custom/ Commercial & Military Units.

40 — 30 BCN Multi-Purpose Portable Charger 6, 8, 12, 24, 36 Volts up to 30 A Mil-B-24095

MOTOR GENERATOR CONTROL EQUIPMENT

Standard and Custom Units for Naval Shipboard and other applications. Ratings to 200 KW, DC & AC.

A.C. Variable Speed Drive Systems. Ratings from 10-200 HP. For centrifugal pumping applications of all fluids. Standard and Custom Designs.

Control Panel 5 KW 60 to 400 Cycle. Precise Frequency Voltage Regulated Naval Shipboard Motor Generator System.

INDUSTRIAL POWER SUPPLIES FOR ELECTROPLATING AND OTHER APPLICATIONS

Unregulated and regulated units utilizing Solid State and Magnetic Power Control.

Standard and Custom Units to 500 Volts and 20,000 Amperes.

D.C. POWER SUPPLIES

Unregulated and regulated types. For ground power, industrial, computer, general purpose and special purpose applications. Complete line of Zenon lamp Supplies and igniters to 25 KW. Regulated units utilize magnetic, controlled rectifiers, transistors for power control. Standard and custom units for commercial and military applications. To 1000 Volts and 20,000 Amperes.

Precisely Regulated Power Supply for Naval Shipboard Helicopter Starting and Servicing. 28 V 450 A

Solid State Inverters, Converters and Frequency Changers. Complete uninterrupted power supplies from 1 to 15 KVA. Standard and Custom Units for Commercial and Military Applications.

Complete "In House" design and manufacturing facility. Quality Assurance under Mil-Q-9858 and Mil-I-45208. Call or write regarding your power problems.

Commercial & Military

The leader in power conversion designs for every application.

Litton power supplies were originally developed to meet exacting weight and space requirements of *military* systems. Today, Litton's miniature *commercial* power supplies inherit the high performance, compactness and reliability of its military counte part. An acknowledged leader in the power supp field, Litton experience and quality are designe into all its commercial and military power product

Features:

- Small size 8.1 to 24 cubic inches (200/250 series) 13 to 108 cubic inches (400 series)
- Commercial and military standard, depending on your applications. MIL-Spec conformance (MIL-E-5400, Class 2; MIL-I-6181D; MIL-P-81279; MIL-STD-704 CAT B)
- Dual outputs (200 series)
- High Efficiency—up to 65% (200/250 series); up to 80% (400 series)
- Slot Range Voltages—3 to 40 VDC. Power rating to 300 watts
- Reliability ranging up to 162,000 hours MTBF (200/250 series); up to 93,500 hours MTBF (400 serie
- Automatic overcurrent and overvoltage protection (power supply off until overload condition removed and input power recycled)
- High current—6 to 30 ampere at power ratings up to 300 wa (400 series)
- Modular packaging for full maintainability
- Latest Litton-developed switching regulator technique

NOTE: The digits of the Model Number indicate the output and current in amps. Example: HT 6-4 has an output volta and current of 4 amps. HT 12-4 has an output of 12 volts at

■ About Mid-Eastern Industries

Mid-Eastern's engineering experience in the design and manufacture of standard and custom power supplies covers a span of 11 years. Over this period Mid-Eastern power supplies have proven their performance in computers, data processing, communications, nuclear research, machine tools; medical apparatus, ground support equipment, process controls and many other special applications.

Mid-Eastern engineers have to their credit the solution of many difficult engineering problems. Superior engineering has been applied to all Mid-Eastern power supplies with the result that every unit meets the high standards of reliability and quality of the most exacting customer. Ease of ch calibration, and maintenance is maintained in each mo the use of interchangeable plug-ins and modular Complete step-by-step trouble shooting and adjustme cedures, schematics, and comprehensive parts data a vided with all standard power supplies.

Along with technical competence, Mid-Eastern offers advantages of doing business with a customer-orien ganization. Not only do we want you to buy our equ but we want you to be secure in the knowledge that w behind it with an integrity and reliability that goes bey legal terms of our warranty. We have earned the con our customers have in us.

H w to Order

e wer supplies in this catalog are all standard produc- n its and are delivered from stock (normally within 7 ys) Call your local Mid-Eastern representative for com- ete information on price and delivery schedules. A list of pre ntatives is included for your convenience.

or r to avoid delay, use the full model number when der g your supply. Unless otherwise specified, orders are ipp via motor freight or UPS.

Wrranty

d-Estern power supplies are backed by an unconditional pai or replacement warranty for one year after date of sale.

■ Applications Assistance

If you are uncertain as to which ME power supply best meets your existing or anticipated need, please consult the factory or your nearest representative. Mid-Eastern power supply experts will welcome the opportunity to assist you and to recommend the best supply for your use.

■ Other Mid-Eastern Products

In addition to standard power supplies, Mid-Eastern manufactures custom-made power supplies and standard and custom diversity combiners. Detailed information on this other equipment is available upon request.

tio include: meters, overvoltage, 10-turn potentiometers, and special input voltages.

PVC-LVC II power supplies also offer these features:

- Voltage/Current Crossover
- Three (3) Range Voltmeter
- Three (3) Range Ammeter
- Mil-T-27A Transformer
- Remote Voltage or Resistance Programming
- Master Slave Series/Parallel
- Availability in Singles and Duals

SPECIFICATIONS:

Input: 105-130 Volts, 47 to 420 Hertz, single phase.

Static Current Regulation (High Performance) **HP option**
Load: At constant input voltage, the current regulation in this High Performance mode is increased to 0.01% or 250 micro-amps by a jumper on rear barrier terminal board.

MODE OF OPERATION
Constant current and constant voltage levels may be preset with the maximum rating as listed in Table 1.

Ripple (Voltage Regulated Mode)
250 Microvolts rms from D-C to 10 Megahertz.

Ripple (Current Regulated Mode)
500 microamps rms.

TRANSIENT RESPONSE
For a no load to full load or a full load to no load step change, the output voltage will return to within 10 millivolts in less than 50 microseconds.

METERS
Three-range voltmeter and three-range ammeter are provided on the front panel.

POLARITY
The output may be floated up to 500 volts peak above ground. Either polarity may be grounded to chassis by means of terminals provided.

DUTY
Continuous at ambient temperatures from 0°C to 60°C.

Remote Sensing: Sensing terminals separate from the load terminals provide regulation against the voltage at the load rather than the voltage at the power supply output terminals. This eliminates the otherwise unavoidable load regulation due to the voltage drop in the wires connecting the supply to the load. This feature does not eliminate voltage excursions resulting from load transients through the load line impedance.

Remote Programming: Voltage Output: The output voltage may be controlled accurately from a remote resistance or voltage, across the "remote voltage programming" terminals in the rear of the power supply. Resistance sensitivity is 200 ohms/volt.

Current Output: The output current may be controlled accurately from a remote resistance connected across the "remote current programming" terminals.

Termination: Barrier-type terminal strips at the rear of the unit provide interface connection for output, remote sensing, remote programming, tracking, HP option, and grounding. Input line cord with three-prong, in-line safety plug is provided. Front panel binding posts for output and ground are provided in addition to the output terminals at the rear.

Parallel Operation: Two like units may operate in parallel to provide twice the rated current of a single unit. Master-slave operation with single output control is provided.

Tracking: Two or more units may be connected in series, parallel or with one common voltage point and controlled with single output control and referenced to one supply's reference voltage. This connection requires the addition of tracking resistors.

OVERVOLTAGE PROTECTION OPTIONS
OVPA: Addition of an overvoltage protection circuit which will "Crowbar" the output terminals when a pre-set voltage level is exceeded. OVPA attaches to front of unit on existing output terminals. Overvoltage protection range is from approximately 6 volts to 10% above rated voltage of the supply.

OVPB: Same as OVPA option, except unit is mounted adjacent to rear terminal strips.

Protection: Load and power supply protection for any overload condition is provided by the current limiting inherent in the automatic crossover-constant current design. Protective fuse will interrupt input power in the event of internal failure.

Resolution: Continuously variable coarse and vernier output voltage adjust potentiometers provide the resolution indicated in Table 1.

MULTI-UNIT CROSS CONNECTION
Series operation: Two or more units may be operated in series to provide higher output voltage at rated current. Each unit functions independently.

New NJE SC series power supplies

For years we've been selling reliable laboratory power supplies at popular prices. Now you can also get these modular power supplies at our popular prices.

SC series sub-rack power supplies

- 4 basic package sizes (SCA, SCB, SCC, SCE).
- 3 different mounting surfaces (each module).
- Convection cooled—no external heat sinking required.
- Fit into racks as small as 3½" high.
- Current limiting automatic short circuit protection.
- Remote voltage adjustment, remote sensing —both standard.
- Five-year unconditional guarantee.
- All-silicon semi-conductors.
- Over voltage option available.

Specifications

Input: 105-125V AC, 47-440 cps
Regulation (Line and Load Combined): ±0.05% or 2mv, whichever is greater.
Ripple: 1 mv rms
Response Time: 20 μsecs.
Temperature Coefficient: 0.015%/°C or 1.8mv/°C, whichever is greater.
Temperature: 75°C max

Remote voltage adjustment and remote sensing are standard. Overvoltage protection and metered panels available as options. Series start is standard on SCB, SCC and SCE and available as an option on SCA models.

5 YEAR WARRANTY!

TC-100.2BR, TC-602CR

.01% ACCURACY, 3 PPM STABILITY

TC-100.2BR	1/10/100 @ 200 mA max.	5 Plus Vernier	1/10/10 @ 100 V. max.
TC-602CR	6/60 @ 2A max.	5 Plus Vernier	6/60/2000 @ 60 V. max.

Combined constant voltage and current sources; all state; digital readout; 2 ppm line and load regula low ripple and noise; programmed output capa remote sensing; automatic voltage and current lim meter monitor; 5¼" panel height. Meets all require for precision constant voltage and current sources.

AC CONSTANT CURRENT

CS-180

60/400/1000 Hz

Model No.	Current Range mA rms	Decades	Compliance Range V rms
CS-180	10 to 110	2	0 to 5

All solid state. For measurement of fuel cell impe and transducer characteristics; supply for lamp filan and other ac current-sensitive devices and compon

AC CONSTANT VOLTAGE

VS-66
VS-78

GYRO, SYNCHRO, MICROSYN SUPPLIES

Model No.	Voltage Range V rms	Frequency Hz	Phase	Rating VA
VS-66	50	800	2	25/ϕ
VS-78	50	800/9600	1	25

VS-66 — All solid state, convection cooled; 0.1% stal 0.1% line and load regulation; 1% total harmonic tortion; remote sensing; phase-locked output; auto overload protection; other frequencies and outputs able. For use as gyro wheel or synchro supply.

VS-78 — All solid state, convection cooled; 0.1% stal 0.1% line and load regulation; 0.5% total harmonic tortion; phase-locked output; remote sensing; auto overload protection; other dual frequencies avai For use as microsyn supply.

VERTERS & FREQUENCY CHANGERS

OVER ONE THOUSAND THREE PHASE AND SINGLE PHASE MODELS AT LOW CATALOG PRICES

80% Minimum Efficiency • Smallest Size • Lowest Cost
Low Distortion • Fastest Delivery

Typical specifications for all models

INPUT RANGES (VDC)
11-16, 11-32, 22-32, 42-54
105-150, 150-250, & 250-350 VDC

OUTPUT RATINGS (VA)
125, 250, 500, 1,000, 1,500
2,000, 3,000 Single Phase,
150, 375, 750, 1,000, 1,500, 3,000
4,500, 6,000, 9,000 Three Phase

OUTPUT FREQUENCIES
48 - 440 Hz continuously
variable or 50, 60, 400 Hz fixed

OUTPUT VOLTAGE
10-130 VAC continuously variable

OUTPUT REGULATION
Less than ±1% for line and load

FREQUENCY REGULATION
Less than ±0.15% for line & load

OPERATING TEMPERATURE
—40°C to 71°C

EFFICIENCY
(Except 12V models) 80% Minimum

DISTORTION
3% to 6%

FREQUENCY CHANGER INPUTS
48 - 440 Hz, Single and Three Phase,
115, 230V

All models available with output metering — New BANTAMWEIGHT miniaturized high power designs now available

VWS65

"The Voltswagen"

POWER SUPPLIES
REGULATED AC–DC
BASE TEMP. RATING 65°

NOTE:

All units in VWS65° & VWS95° Series have been designed using "WORST CASE ANALYSIS" incorporating components derating and prototype analysis.

65° FEATURES

- ☐ 0°C to 65°C base plate operation
- ☐ -20°C to 85°C storage
- ☐ High grade industrial and commercial applic ns
- ☐ Temperature coefficient - 0.01%/°C or 1MV/°C
- ☐ Overload protection
- ☐ Short circuit protection
- ☐ Reverse voltage protection
- ☐ Over-temperature protection*
- ☐ Over-voltage protection (optional)
- ☐ M.T.B.F. 40,000 hours
- ☐ Recovery time - less than 50 Micro sec half lo to full load.
- ☐ Off ground operation
- ☐ Transformer design per MIL-T-27A

*Standard in all units in Case Sizes NA and or

SPECIFICATIONS VWS 65 Series

Input Voltage Range	115VAC ± 10%
Line Swing	103.5VAC to 126.5VAC
Input Frequency Range	47 Hz to 440 Hz
Regulation Accuracy	0.01% + 1MV for Full input range
Ripple	0.02% + 2MV for 0 to 100% load change
Temperature Co:	0.01%/C° of nominal output voltage
Temperature, Storage	-20°C to 85°C
Temperature, Operating	-20°C to + 65°C mounting Base, refer to specific model for maximum ambient
Polarity	VWS65 Series Power Supplies may be used with positive or negative ground or output may be floated to 250 Vdc on lowest voltage terminal. Consult factory for higher ratings
Output Voltage Adjustment Range	± 10% of Nominal
Series Operation	May be provided at no additional cost
Short Circuit Protection	Fold back current limiting
Over-Temperature Protection	Standard on NA case size and larger
Over-Voltage Protection	(Optional) will be installed internally when ordered with power supply
Recovery Time	Less than 50 micro seconds for 1/2 load to full load step change
Operation with Lamp Loads	Available upon request
400 Hz Operation Only	Power Supplies can be packaged in smaller can sizes (approx. 1 size smaller).
Stability	Less than .5% (for 8 hours continuous operation).

OPTIONS

'Ov -voltage protection — suffix	- O.V.
40 Hz input only-(Reduced Size & Wgt)	- A.
Op ration with lamp loads	- L.
Fi d output voltage	- F.
Re ote sensing	- R.
Ex rnal output adjustment	- X.
Ov -temperature protection	- O.T.
Op on for Inserts	- H.

OTHER SPECIAL OPTIONS

For simplicity we have omitted the listing of vast numbers of options. However, many other special options are available upon request, such as special configurations, special painting, closer regulation, 230 volt input, multiple outputs, etc. If your needs cannot be filled from our catalog try our factory. You may be surprised at our capabilities.

VWS95

BASE TEMP. RATING 95°

QUALIFIED FOR EXTREME MIL ENVIRONMENTS

SPECIFICATIONS VWS 95 Series

Input Voltage Range	115VAC ± 10%
Line Swing	103.5VAC to 126.5VAC
Input Frequency Range	47 Hz to 440 Hz
Regulation Accuracy	0.01% + 1MV for Full input range
Ripple	0.02% + 2MV for 0 to 100% load change
Temperature Co:	0.01%/C° of nominal output voltage
Temperature, Storage	-55°C to + 105°C
Temperature, Operating	-20°C to + 95°C mounting Base, refer to specific model for maximum ambient
Polarity	VWS95 Series Power Supplies may be used with positive or negative ground or output may be floated to 250 Vdc on lowest voltage terminal. Consult factory for higher ratings
Output Voltage Adjustment Range	± 10% of Nominal
Series Operation	May be provided at no additio
Short Circuit Protection	Fold back current limiting
Over-Temperature Protection	Standard on NA case size an
Over-Voltage Protection	(Optional) will be installed in when ordered with power supply
Recovery Time	Less than 50 micro seconds for to full load step change
Operation with Lamp Loads	Available upon request
400 Hz Operation Only	Power Supplies can be packa smaller can sizes (approx. 1 size
Stability	Less than .5% (for 8 hours con operation).

NOTE: 100% MIL Components

WARRANTY: The Nucor Warranty not only guarantees you an instrument which will perform to published specification, but also expresses our pride and confidence in the materials and workmanship which have gone into that instrument. It is a warranty backed by over 12 years experience in the Electronics industry.

All Nucor products are warranted against defects in materials and workmanship. This warranty applies for One Year from date of delivery. We will repair or replace products which prove to be defective during the warranty period. No other warranty is expressed or implied. We are not liable for consequential damages.

ORDER by MODEL NUMBER: When ordering please specify the catalog model number and name of instrument desired. For example "VWS5/6-OV". To prevent misunderstanding, include option numbers and specific instructions in your order whenever you desire special options or special features such as a special color, non-standard input AC power connector, etc.

WHERE TO SEND YOUR ORDER: Your order should be sent directly to Nuclear Corp. of America, Power Supply division, 2 Richwood Place, Denville, N.J. 07834.

NUCOR

95° FEATURES

- 0° to +95°C operation
- 55° to +125°C storage
- Qualified for extreme MIL environments
- Temperature coefficient – 0.01%/°C or 1MV/°C
- Overload protection
- Short circuit protection
- Reverse voltage protection
- Over temperature protection*
- Over voltage protection (optional)
- M.T.B.F. 40,000 hours
- Recovery time – less than 50 Micro sec half load to full load.
- Off bound operation
- Transformer design per MIL-T-27A

*Standard in all units in Case Sizes NA and larger

OPTIONS

- ☐ Over-voltage protection — Suffix O.V.
- ☐ 400 Hz input only-(Reduced Size & Wgt.) - A.
- ☐ Operation with lamp loads - L.
- ☐ Fixed output voltage - F.
- ☐ Remote sensing - R.
- ☐ External output adjustment - X.
- ☐ Over-temperature protection (see note) - O. T.

If our VW Series can't measure up, Look into our specialty; CUSTOM SUPPLIES.

NUCOR

NUCLEAR CORPORATION OF AMERICA
POWER SUPPLY DIVISION
2 RICHWOOD PLACE, DENVILLE, NEW JERSEY 07834
TELEPHONE 201-627-4200 (TWX) 710-9878487

POWERTEC RM* SERIES

*RACK MOUNTED POWER SUPPLIES

- **HIGH EFFICIENCY**... less heat dissipation—power savings is approximately $280/year over competitive units.
- **INTEGRATED CIRCUITRY**... Plug-in PC board features IC regulator for increased performance and reliability.
- **STORAGE TIME**... 2 milliseconds of operation during input power interruption.
- **CONVECTION-COOLED**... No fans t lower reliability.
- **HIGH QUALITY**... Only the finest mil tary and computer grade component are used.
- **+55°C RATING**... Full rating to +55° means more power per dollar.

SPECIFICATIONS

INPUT VOLTAGE: 115 VAC ±10%; 57 to 440 Hz (derate current 10% for operation from 57 to 47 Hz; derate current 20% for operation from 126.5 VAC to 132 VAC; operation at 132 VAC below 57 Hz not advised).

OUTPUT RATING: See chart for output rating of individual units; output voltage adjustable ±5% on all units.

LINE REGULATION: ±0.1% maximum. Line regulation measured for a 10% line voltage change.

LOAD REGULATION: ±0.1% maximum. Load regulation measured for a 50% load change.

RIPPLE: 3 MV peak to peak typical, .03% of rated output voltage + 3 MV peak to peak maximum.

TRANSIENT RESPONSE: 20-50 μsec typical for a 25% load change.

TEMPERATURE COEFFICIENT: ±0.01% per degree centigrade maximum.

STABILITY: ±0.1% maximum excursion for eight hour after warmup.

TEMPERATURE RATING: Continuous operation at fu load 0°C to +55°C. Derate to 50% at 71°C. Storag temperature −55°C to +85°C.

OVERVOLTAGE PROTECTION: Overvoltage protectio is standard on all units. This internally located circu is set to 120% ±5% of the output voltage rating of th unit.

OVERLOAD PROTECTION: All units are fully protecte against overload or short circuit utilizing foldback typ current limiting.

REMOTE SENSE: All case sizes utilize remote sensin and special circuitry to insure stable operation in th remote sense mode.

CONSTRUCTION: All aluminum construction and ex ternal heat sink insures minimum size and weight fo unit ratings.

POWERTEC XR* SERIES

SILICON REGULATED MODULA POWER SUPPLIE

*EXTRA RELIABILITY

FEATURES

- **LOW COST** . . . prices start from $34.
- **HIGH QUALITY** . . . only the finest m tary and computer grade componen are used.
- **SMALL SIZE** . . . typically 40% to 50 smaller and lighter than competiti models.
- **INTERNAL OVP** . . . optional OVP is fa tory set and located inside the unit.
- **+71°C RATING** . . . full rating to +71 means more power per dollar.

SPECIFICATIONS

INPUT CHARACTERISTICS: 115 VAC ±10%; 57 to 440 Hz (derate current 10% for operations from 57 to 47 Hz; derate current 20% for operation from 126.5 VAC to 132 VAC; operation at 132 VAC below 57 Hz not advised)

OUTPUT RATING: See chart for output rating of individual units; output voltage adjustable ±3% on all units.

REGULATION: See chart for regulation of individual units; load regulation based on 50% load change; line regulation based on 10% line change.

RIPPLE: Typical ripple is 1 MV RMS or 3 MV peak to peak; maximum ripple is 5 MV peak to peak.

TRANSIENT RESPONSE: 20 to 50 μsec typical for half load to full load.

TEMPERATURE RATING: Continuous operation at load 0°C to +71°C. Storage temperature −55°C +85°C.

TEMPERATURE COEFFICIENT: ±0.01% per deg centigrade maximum.

STABILITY: ±0.1% for eight hours after warmup.

OVERVOLTAGE PROTECTION: Optional overvolta protection is offered on all units. This internally loca circuit is set to 120% ±5% of the output voltage rat of the unit.

OVERLOAD PROTECTION: All units are protect against overload or short circuit.

OUTPUT ISOLATION RESISTANCE: 500 megohm mi mum at 500 VDC.

CONSTRUCTION: All aluminum construction insu minimum size and weight for unit rating.

SR* SERIES

*SILICON REGULATED MODULAR

POWER SUPPLIES

- **LOW COST** . . . prices start from $89.0
- **HIGH QUALITY**. . . only the finest militar and computer grade components ar used.
- **SMALL SIZE** . . . typically 40% to 50% smaller and lighter than competitiv models.
- **INTERNAL OVP** . . . optional OVP is fac tory set and located inside the unit.
- **+55°C RATING** . . . full rating to +55° means more power per dollar.

SPECIFICATIONS

INPUT VOLTAGE: 115 VAC ±10%; 57 to 440 Hz (derate current 10% for operations from 57 to 47 Hz; derate current 20% for operation from 126.5VAC to 132 VAC; operation at 132 VAC below 57 Hz not advised)

OUTPUT RATING: See chart for output rating of individual units; output voltage adjustable ±3% on all units.

REGULATION: See chart for regulation of individual units; load regulation based on 50% load change; line regulation based on 10% line change.

RIPPLE: Typical ripple is 1 MV RMS or 3 MV peak to peak; maximum ripple is 5 MV peak to peak.

TRANSIENT RESPONSE: 20 to 50 μsec typical for half load to full load.

TEMPERATURE RATING: Continuous operation at full load 0°C to +55°C. Derate to 50% @ 71°C. Storage temperature −55°C to +85°C.

TEMPERATURE COEFFICIENT: ±0.01% per degre centigrade maximum.

STABILITY: ±0.1% for eight hours after warmup.

OVERVOLTAGE PROTECTION: Optional overvoltag protection is offered on all units. This internally locate SCR crowbar circuit is set to 120% ±5% of the outp voltage rating of the unit.

OVERLOAD PROTECTION: All units are fully protecte against overload or short circuit utilizing foldback typ current limiting.

REMOTE SENSE: G and H case sizes utilize remo sensing and special circuitry to insure stable operatio in the remote sense mode.

CONSTRUCTION: All aluminum construction and e ternal heatsink insure minimum size and weight f unit rating.

POWERTEC ML SERIES

FULLY MILITARIZED POWER SUPPLIES

- Meets MIL-E-16400, MIL-T-21200, and MIL-E-41
basic equipment specifications
- Transformers are hermetically sealed, meet MI
T-27B grade 4
- No non-standard parts; semiconductors to MI
S-19500; other components to ANA-400
- Completely reparable design, plug-in circu
board
- All aluminum construction with stainless ste
hardware
- Full power rating to 71°C
- Military documentation packages available

SPECIFICATIONS

INPUT VOLTAGE: 115 VAC ±10%; 57 to 440 Hz (derate current 10% for operations from 57 to 47 Hz; derate current 20% for operation from 126.5VAC to 132 VAC; operation at 132 VAC below 57 Hz not advised)

OUTPUT RATING: See chart for output rating of individual units; output voltage adjustable ±3% on all units.

LINE REGULATION: ±.05% maximum for standard unit; ±.00075% maximum for high performance unit. Line regulation measured for a 10% line voltage change.

LOAD REGULATION: ±.05% maximum for standard unit; ±.00075% maximum for high performance unit. Load regulation measured for a 50% load change.

RIPPLE: .01% + 1MV peak to peak maximum for standard unit. 500 μV peak to peak maximum for high performance unit.

TRANSIENT RESPONSE: 50 μsec Typical for a ½ load to full load change.

STABILITY: ±.05% maximum for standard unit; ±.002% maximum for high performance unit. For 8 hr. period after warmup.

TEMPERATURE COEFFICIENT: ±.01%/°C maximum for standard unit, ±.002%/°C maximum for high performance unit.

OVERVOLTAGE PROTECTION: All units feature SCR overvoltage protection set at 120% ±5% of output voltage rating.

REMOTE SENSE: All units feature remote sense capability.

OVERLOAD PROTECTION: All units utilize electroni foldback overload protection and are fully protecte for all overload and short circuit conditions.

SHIELDING: Transformer shield between primary an secondary grounded.

STORAGE TEMPERATURE: −62°C to +85°C.

OPERATING TEMPERATURE: 0°C to +71°C operatio for maximum current rating convection cooled. Tes method per MIL-STD-810, Method 501 procedure I II, Method 502 procedure I.

HUMIDITY: 95% per MIL-STD-810B, Method 507 prc cedure I.

FUNGUS: Per MIL-STD-810B, Method 508.

SALT FOG: Per MIL-STD-810B, Method 509

DUST: Per MIL-STD-810B, Method 510.

EXPLOSIVE ATMOSPHERE: Per MIL-STD-810B, Metho 511 Procedure I.

VIBRATION: Per MIL-STD-810B, Method 514 Proce dure X, curve AA (5G peak)

SHOCK: Per MIL-STD-810B, Method 516 Procedur I, Curve 516-2, (40G peak)

RFI: Per MIL-I-6181D

ISOLATION RESISTANCE: 500 megohm minimum a 500 VDC between input, output & case.

POWERTEC HP* SERIES

FLAT PACK MODULAR

*HIGH PERFORMANCE

FEATURES

- **SERIES REGULATION . . . NO** switching **SPIKES** or **RFI** problems
- **HIGH EFFICIENCY** . . . up to 75%
- **HIGH CURRENT**...up to 30 amperes at 5 VDC
- **DENSE PACKAGING** . . . approximately **2 watts/in²**
- **MILITARIZED** . . . meets **MIL-E-5400** airborne equipment specifications

SPECIFICATIONS

INPUT VOLTAGE: 115 VAC ±10% line to neutral 3Ø, 400 Hz ±5% standard. Optional adders:
A) Input per MIL-STD-704 category B
B) 120 VAC ±10%

OUTPUT RATING: See chart for output rating of individual units; output voltage adjustable ±5% on all units.

REGULATION: See chart for regulation of individual units; load regulation based on 50% load change; line regulation based on 10% line change.

RIPPLE: Typical ripple is 3 MV peak to peak, maximum ripple is 10 MV peak to peak.

TRANSIENT RESPONSE: 50 μsec maximum for a ⅓ load change.

PROGRAMMING: ±5% remote voltage margining standard on all units.

REMOTE SENSING: Remote sense capability standard on all units.

STABILITY: ±0.1% for 8 hours after warmup.

TEMPERATURE RATING: Continuous operation at full load from −55°C to +80°C base plate temperature (base plate cooled design). Storage temperature −62°C to +125°C. Test method per MIL-STD-810B Method 501.

TEMPERATURE COEFFICIENT: ±0.01% per degree centigrade maximum.

OVERVOLTAGE PROTECTION: All units feature SCR overvoltage protection set at 120% ±5% of output voltage rating.

OVERLOAD PROTECTION: All units utilize electronic foldback overload protection and are fully protected for all overload and short circuit conditions.

HUMIDITY: 95% per MIL-STD-810B, Method 507 procedure I.

FUNGUS: Per MIL-STD-810B, Method 508.

SALT FOG: Per MIL-STD-810B, Method 509.

EXPLOSIVE ATMOSPHERE: Per MIL-STD-810B, Method 511 Procedure I.

VIBRATION: Per MIL-STD-810B, Method 514 Procedure I, Curve Z.

SHOCK: Per MIL-STD-810B, Method 516 Procedure I, Curve 516-1

RFI: Per MIL-I-6181D

ISOLATION RESISTANCE: 500 Megohm minimum between input, output and case.

CONSTRUCTION: All aluminum with stainless steel hardware. Basic component selection per ANA 400.

POWERTEC FC* SERIES

ULTRA MINIATURE POWER SUPPLIES

FEATURES

- **COMPACT** . . . 30 watts in 30 cubic in.
- **LIGHT WEIGHT** . . . only 1½ pounds
- **RELIABILITY** . . . calculations per MIL HDBK-217A in excess of 100,000 hour MTBF
- **QUALITY** . . . only finest military an computer grade components used.

*FREQUENCY CONVERSION . . . A revolutionary design breakthrough! Outstanding performance in this ultra-miniature configuration is achieved through the elimination of all 60Hz magnetic components using a proprietary high-frequency conversion method.

POWERTEC CUSTOM POWER SUPPLIES

MODEL 8D164 FULLY MILITARIZED, COMPUTER-CONTROLLED POWER SUPPL

Model 8D164 is a CUSTOM design used in an air trans portable shelter in the Air Force 407L Program. Sem conductors are per **MIL-S-19500,** other components i accordance with **ANA-400.** Full documentation has bee produced in compliance with Air Force **375L** series dat configuration controls: drawings per **MIL-D-1000, categor E, Class 2;** technical manual per **MIL-T-9941;** maintain ability analysis per **MIL-HDBK-472;** reliability calculation per **MIL-HDBK-217A.** Features include ten precision regu lated DC supplies, 5 AC outputs. Each DC supply is completely removable and repairable module with adjust able current compensation, and each has a computer pro grammed high speed output. Complete protection packag includes OVP, reverse voltage protection, current limit overtemperature and fault indicators.

Powertec has a capable experienced engineering staff to help solve your custom power supply problems.

CALIBRATED PRECISION POWER SOURCES 0-40 VDC/0-1 AMPERE

The Model 4010 DC power source designed to combine the accuracy of 5-digit potentiometric or digital voltmeter with a general purpose power supply.

Critical circuits and components are maintained at a constant ambient temperature in an RF free, temperature stabilized chamber.

The output voltage may be remotely resistance programmed with an accuracy of 0.1%.

The Model 4010 is self-contained in portable housing designed for bench or rack applications

• Four decade switches and 10-turn potentiometer provide digital readout to six significant figures • Sixth place interpolation with 10 microvolt resolution • Dial accuracy is 0.1% plus one millivolt up to one volt, 0.1% absolute from one to forty volts • Continuously adjustable output current limiter • Flashing indicator signals output short circuit, overload or current limiter operation • Self-restoring electronic overload and short circuit protection • Output voltage or current monitored by panel voltammeter with full scale accuracy of ±2% • Front and rear access output terminals • Separately fused line and load circuits • Bail-carrying handle tilts front panel for viewing ease.

SPECIFICATIONS:

Output: 0 to 40 VDC continuously adjustable at 0 to 1 ampere.

Input: 105 to 125 volts, 47 to 440 Hz, 90 watts nominal.

Regulation: Line or load less than 0.001% + 100 microvolts for line variations or load variations over the operating range. Without remote sensing, the load regulation is 250 microvolts at the front panel terminals.

Ripple and Noise: Less than 100 mv peak-to-peak at 60 Hz line frequency (measured with an oscilloscope with a bandwidth of 50 MHz).

Resetability: 0.003% or 50 microvolts (whichever is greater) of the original dial setting.

Stability: Better than 0.001% + 100 microvolts per 8 hours

Source Impedance: Less than .0005 ohms at DC; 0.04 ohms at 20 KHz, 0.5 ohms at 1 MHz

Recovery Time: Less than 30 microseconds to return to within 1 millivolt or 0.005% (whichever is greater) of the set voltage for a step change in rated load (1 microsecond rise time) of 10% to 100%; less than 50 microseconds to return to within 500 microvolts.

Temperature Coefficient:
< 0.001% per °C to 45°C
< 0.002% per °C from 45° to 60°C

Current Limiting: 0 to 1 ampere continuously adjustable by a front panel control.

Remote Sensing: Two terminals on rear barrier strip

Remote Programming: Rear panel terminals provide resistance programming at 1000 ohms per volt.

Dimensions: 8⅜" x 4¾" x 11 9/16"

Weight: 12 lbs.

$325.00

New York

CALIBRATED PRECISION POWER SOURCES 0-20 VDC/0-500 MA

The Model 2005A is a calibrated precision power source designed to supply extremely stable DC output with low noise content. Compact and light, the Model 2005A is self-contained in a portable housing designed for bench or rack applications.

• Two dual concentric decade switches provide digital readout to five significant figures below 10 volts; to six significant figures above 10 volts. Last-place interpolation by a potentiometer with a 10μV resolution. A toggle switch provides an additional digit in the 10 to 20 volt range • Current limiting – maximum output may be limited to any value below 500 mA with a front panel control, • Limit indicator lamp on the front panel flashes when the output of the supply is in the current-limited region

SPECIFICATIONS:

Output: 0 to 20 VDC continuously adjustable at 0 to 500 mA.

Input: 105 to 125 volts, 47 to 440 Hz, 40 watts nominal.

Regulation: Line or load: < less than 0.0005% + 100 microvolts

Ripple & Noise: Less than 100 microvolts peak-to-peak

Stability: (8hr.): < 0.001% + 100 microvolts

Source Impedance: < 0.002 ohm at DC; 0.04 ohm at 20 KHz; 0.5 ohm at 1 MHz

Recovery Time: Less than 25 microseconds to return to within 100 microvolts of the set voltage, for a step change (1 microsecond rise time) of 80% of rated load. (20% minimum load.)

Temperature Coefficient: DC output voltage changes less than 0.001% or 50 microvolts (whichever is greater) per °C over the range 0° to +45°C; less than 0.002% or 100 microvolts (whichever is greater) per °C from +45°C to +60°C.

Current Limiting: 0 to 500 mA continuously adjustable by a front panel control.
Flashing lamp indicates overload or short circuit

Remote Sensing: Two terminals on rear

Remote Programming: Rear panel terminals provide resistance programming at 1000 ohms per volt.

Metering: Front-panel volt-ammeter with an accuracy of ±2% of full scale.

Dimensions: 8⅜" x 4¾" x 8 7/32".

Weight: 9 pounds.

• All silicon semiconductor regulator system with new, low noise diff-amp input transistor and specially processed zener voltage reference • Advanced solid state circuitry • Exceptional stability through design simplicity • Critical components maintained at constant ambient in temperature controlled oven • Self-restoring electronic overload and short circuit protection with continuously adjustable current limiting control • Adjustable voltage limiter on 2005P avoids voltage runaway with open remote programming resistor • Performance specifications based on anticipated ratings at end of five years of service • Built-in protection against turn-on or turn-off transients • 100 hour minimum pre-aging of power supply prior to test and calibration • Individual calibration data furnished with each unit

UNIPLY™...
A LABORATORY OF POWER SUPPLIES

0-7V at 5A; 0-15V at 3A; 0-25V at 2A; 0-50V at 1A; 0-60V at 0.5A

$195.00
F.O.B. Westbury
New York

DEL 6050 UNIPLY™ is a regulated DC wer source that functionally replaces e conventional power supplies. It utiles a new regulator technique which proles additional features not available in ndard instruments. Output voltage and rrent ranges cover a broad spectrum of oratory requirements for both digital d analogue applications. Ranging is tranent-free and automatic with changes in ad and the setting of voltage and current ntrols. Operation is completely electron, without relays or manual switching. A ashing panel indicator signals loss of gulation when load demands are in exss of control setings or the AC line ltage is too low to support increased tput levels. The supply may be operated ntinuously into an overload or short cirit without damage. Portable and light, e Model 6050 is designed for laboratory ench or rack use.

SPECIFICATIONS:

Input: 105-125 volts, 57-440 Hz, 100 watts nominal.

Output: 0-60 volts DC, continuously adjustable with the following minimum output:
0-7V, 0-5A 0-25V, 0-2A 0-60V, 0-0.5A
0-15V, 0-3A 0-50V, 0-1A

Line Regulation: 0.01% +1 millivolt

Load Regulation: 0.01% +1 millivolt for load variations from 0-100% of rated output current.

Polarity: Either positive or negative output terminal may be operated at ground potential.

Ripple and Noise: Less than 1 millivolt peak-to-peak

Source Impedance: < 0.005Ω at DC, 0.1 ohm to 20 KHz, 1.0 ohm to MHz.

Recovery Time: Less than 50 microseconds to return to within a 15 millivolt band of the original voltage for a step change in rated load of 10% to 100% (1 microsecond rise time).

Stability: < 0.02% +3 millivolts per 24 hours

Operating Temperature: 0-50°C at full load. Storage: —20°C to +85°C.

Temperature Coefficient: < 0.02% per degree C

Current Limiting: Concentric switch/potentiometer provides continuous adjustment in two ranges: 0-500 milliamperes, 0-5 amperes.

Metering: Front panel "edgewise" meter and a selector switch permits monitoring voltage or current with an accuracy of ±2% of full scale. Current range changes automatically with current limiter range switch.

Output Terminals: Front Panel: Three binding posts for positive, negative and ground.

Rear Panel: Seven terminal barrier strip for output voltage sensing & voltage programming.

Dimensions: 8⅜" wide x 4¾" high x 11⁹⁄₁₆" deep

Weight: 15½ lbs.

Finish: Brushed anodized natural aluminum etched panel with black nomenclature. Blue vinyl laminated steel dust cover. Gold iridite bottom plate.

Rack Panel Adapters: Panel adapters are available for mounting a single unit or two units side by side in standard 19" rack.

LABORATORY DC POWER SOURCES

• All units have remote sensing*; remote programming • Front and rear output terminals • Continuously adjustable voltage and current limiting controls • Model 5015T, 1010T, 1210S and 3650S feature a current limit indicating monitor • Modular package construction suitable for rack mounting. Single or dual mounting in 19" panel • Processed under Power Designs' "Predictable-Reliability" program for a 5-year MTBF. The program features: avalanche-controlled silicon rectifiers, stress-tested transistors, pre-aged zener references with extrapolated stability criteria based on 1/f noise changes, computer-grade capacitors, tin-oxide-film resistors, and components operated at 50% of manufacturers' published ratings. Units pre-aged under full-load conditions for a minimum of 50 hours

REDULE® UNIVERSAL MODULAR POWER SUPPLIES

Single or dual outputs with choice of several output voltage levels in one package • Multi-turn remental voltage adjustment potentiometer • Parallel or series operation with any terminal at ound potential • Remote sensing • Remote programming • Self-restoring fold-back overload d short protection • Thermal overload cutout • 100% inspected "reliability controlled" silicon miconductors • 50 hour power supply pre-aging prior to test • 50 μs recovery time • 105-5 V, 57-440 Hz input • Mounts in any plane, to any surface • No external heat sink required Connector keying system prevents mating errors • Complete maintainability, reliability and rkmanship to most AEC & NASA standards

PARTIAL LIST OF AVAILABLE UNITS

MODEL	OUTPUT RATING	NUMBER OUTPUTS	REGULATION LINE/LOAD	MAX. RIPPLE PK TO PK	INPUT POWER @ NOM. LINE	†PRICE
UPM-6	24V @ 1½A, 27V @ 1¼A, 30V @ 1A	1	.01% + 2mv	1mv	90w	$139.50
UPM-11	0-16V @ 1A	2	.01% + 1mv	1mv	80w	199.00
UPM-16*	5, 6V @ 5A	1	.01% + 2mv	1mv	85w	169.00

*Includes built-in overvoltage crowbar protection. †"N" Suffix for Neg. Output Polarity. "P" Suffix for Pos. Output Polarity. †FOB Westbury

UNIVERSAL MOUNTING BRACKETS P/N A-64039 **$1.25 ea.** Brackets permit mounting of module to either horizontal or vertical surface.

HOLD-DOWN GUIDE TRACKS

Single Track	A-65017	$1.25/ft.
Dual Track	A-65007	$1.25/ft.

REDULE® ACCESSORIES

FRONT LOADING POWER SUPPLY BIN CO-1120A $59.50 Accommodates up to 5 UPM modules or 2 UPMD modules plus 1 UPM module or any combination thereof. The bin may be mounted within a standard 19 inch equipment cabinet.

REAR LOADING POWER SUPPLY BIN CO-1102A $49.50 Accepts modular power supplies from rear of bin. Has same capacity as the Front Loading Bin.

MATING CONNECTORS P/N-00-8016-038-217-008 (Gray) $3.85 for Models UPMD-X9, UPMD-11. **P/N 802338MC (Red) $3.85** for Models UPM-6, 11, 22, 33, 44, UPMD-6, 15

MATING CONNECTOR HOOD AND CABLE CLAMP ASSEMBLY P/N 8016 $1.90 Fits either mating connector.

SIDE MOUNTING COVER P/N B-67057 $5.00 ea. Permits mounting of module to horizontal or vertical surface.

PMC

The UniPower Wide Range Series of Nine from POWER/MATE CORP. make slot supplies obsolete!

SPECIFICATIONS:

INPUT—105-125V, 47-420 CPS.

OUTPUT VOLTAGE—0-30 volts for all units except Uni-76 (0-34V); Uni-88 (0-34V); and UniTwin 1 (0-25V dual output).

OUTPUT VOLTAGE RANGE—Set in overlapping ranges by means of internal quick disconnect taps.

REGULATION—Uni-76 and Uni-88 better than ±0.005% or 1MV for line and load. All other units bet than ±0.01% or 1MV for line and load.

RIPPLE—Less than 250 microvolts.

RESPONSE TIME—Less than 20 microseconds.

TEMPERATURE COEFFICIENT—Better than 0.01%/°C.

LONG TERM STABILITY—Better than 0.025% for 8 hours.

OVERLOAD & SHORT CIRCUIT PROTECTION—Solid state short circuit and overload protected. Instantaneous recovery, and automatic reset. Unit cannot be damaged by prolonged short circuits overloads.

POLARITY—May be either positive, negative or floating up to 300 volts.

AMBIENT OPERATING TEMPERATURE—Continuous duty from −20°C to +71°C ambient.

STORAGE TEMPERATURE— −55.C to +85°C.

OUTPUT CURRENT vs. TEMPERATURE—Unit is rated full output at 40°C ambient, and is derat for operation to 71°C. A modest amount of forced air cooling will permit full output at 71°C. Consult factory.

REMOTE-LOCAL SENSING—Provision is included to permit remote sensing of the output voltage direc at the load for improved over-all regulation. Unit may be connected for local sensing if desired.

REMOTE-LOCAL VOLTAGE ADJUST—Output voltage may be remotely adjusted, or internally adjusted w coarse and fine controls. Both are accessible through holes in the terminal end of the supply.

OUTPUT VOLTAGE vs. OUTPUT CURRENT FOR VARI-RATED UNI SERIES

OEM REGULATED POWER SUPPLIES

Developed from proven UniPower principles / Liberal OEM discounts*

GENERAL SPECIFICATIONS

Voltage Input: 105-125VAC, 47-420cps
Current Output: Up to 34 amps
Voltage Output: 3 to 48 volts
Regulation: ± 0.01% line and load
Ripple: Less than 250 microvolts
Response Time: Less than 20 microseconds
Temperature Coefficient: Better than 0.01%/°C.
Long Term Stability: Better than 0.025% for 8 hours.
Overload & Short-Circuit Protection: Solid state protection gives instantaneous recovery and automatic reset. Cannot be damaged by prolonged short-circuits or overloads.

Polarity: May be either positive, negative or floating up to 300 vol
Ambient Operating Temperature: Continuous duty from −20°C +71°C ambient.
Storage Temperature: −55°C to +85°C.
Output Current vs Temperature: Rated for full current output at t peratures between −20°C and +45°C. Linearly derated f +45°C as shown in charts below.
Remote or Local Sensing: Provision included for remote sensing output voltage directly at the load, for improved overall regulat Also may be connected for local sensing.
Remote or Local Voltage Adjust: Output voltage may be remotely justed, or internally adjusted with coarse and fine controls. control is accessible through hole in terminal end of supply.

MODEL OVP-2

Over-voltage Protection is provided by this self-contained, crowbar-type solid state unit. It is independent of the power supply or the type of failure. It is continuously adjustable between 3 to 60 volts and is rated for use with any power supply in the Uni or OEM Series with current outputs up to 34 amperes. Response time is between 3-6 microseconds. Dimensions are 1" x 2⅞" x 3⅜". Price: **$30.00**

Low-Cost Regulated Power Supplies for Integrated Circuit Use

FEATURES:

- ADJUSTABLE 5 VOLT, 1, 5 or 10 AMP OUTPUT
- OVERVOLTAGE CROWBAR PROTECTION
- OVERLOAD AND SHORT-CIRCUIT PROOF
- +0.1% LINE AND LOAD REGULATION
- 115 VOLT 47-420 CPS AC INPUT
- ALL SILICON SEMICONDUCTORS
- TOP QUALITY COMPONENTS
- FIVE YEAR WARRANTY
- LOW COST...GENEROUS OEM DISCOUNTS

Power/Mate's IC power supplies are competitively priced units designed expressly for integrated circuit applications. Using open-chassis construction for economy, they contain all of the essentials for high reliability with no unnecessary extras. Components are of highest quality and industrially rated for long life. In addition, the IC 5/1, IC 5/5, and IC 5/10 are backed by the same 5-year warranty given all Power/Mate Corp. power supplies!

PRICE

IC 5/1—$88 IC 5/5—$128 IC 5/10—$158

SPECIFICATIONS:

INPUT VOLTAGE: 105-125 VAC, 47-420 CPS

OUTPUT VOLTAGE: 5.0 V + 2% adjustable

LINE REGULATION: ±0.1% or 8 MV for ±10% line chan s.

LOAD REGULATION: ±0.1% or 8 MV from full load to no-l d.

OPERATING AMBIENT TEMPERATURE: 0-55°C.

POLARITY: May be either positive, negative or floating (u o 300 Volts).

LOAD CURRENT: 1.0, 5.0, or 10.0 Amperes

RIPPLE: .01% or 1 MV (RMS)

OVERLOAD PROTECTION: Power supply cannot be dama d by current overloads. Overload trip point is adjuste y means of an internal potentiometer.

OVERVOLTAGE PROTECTION: Internal crow-bar protects x-ternal circuits against excessive output voltage. Crow r firing point is adjustable by means of an internal potenti n-eter. DC output is fused.

DIMENSIONS: 6"L x 5"W x 5½"H.

WEIGHT: 5¾ pounds net; 6¾ pounds shipping.

PS Series FERRORESONANT REGULATED CPOWER SUPPLIES

ATIRES:

- ligh fficiency—70-90%
- ow ıst
- ligh eliability—over 150,000 hours MTBF
- thor circuit proof
- ligh uality components
- ul sicon semiconductors
- uilt limiting for over-voltage and over-current
-)pere in series parallel
- Jomtible with standard PMC Power Supplies and ccesories

FPSSeries units supply DC outputs from 5 to 48 lts, ith currents to 25 amps. The inherent simcity f design of these supplies greatly increases pir riability. Components are conservatively rated - funer assure optimum performance. All FPS its ay be used with the standard Power/Mate cks nd metered accessories.

An tra low ripple version is offered in which the tpuripple is reduced below that of standard FPS ode This is denoted by the suffix "F" after the odenumber (example: FPS 15-12F). The added teri increases the unit length by four inches. ise ze, FCF.

PEIFICATIONS:

CCLACY: ±2%, measured at 115 VAC, full load, 30C. Initial cold output is 1% higher.

EGUATION LINE: ±1%, for ±15 volt AC line variatio at 25-100% load. For loads below 25%, line reglation is +1.5% output change.

EGUATION LOAD: Refer to specific model on chart at ght.

TAEITY (8 hr.): 1% or 0.1V, whichever is greater.

EMIRATURE COEFFICIENT: 0.05%/C°.

IPU 115 VAC-., ±15 VAC-., 60Hz ±5% single phe. Input frequency variations produce an aproximate equal percentage output voltage chige.

MBNT OPERATING TEMPERATURE: —20°C to +°C.

TOFGE TEMPERATURE: —40°C to +85°C.

OOING: Convection.

UTIIT IMPEDANCE: 1 kHz-10 kHz: 0.05 ohms, 10kHz-100 kHz: 0.05 ohms +0.5 microhenries.

RAIIENT RESPONSE: (50-100% current) 50 milliseends.

VELOAD PROTECTION: Current limiting transfoner restricts short circuit current to safe value.

SOLTION VOLTAGE: 600 volts to chassis.

ERIS/PARALLEL OPERATION: Identical models, cabe paralleled for approximately double current (aow for 10% imbalance). Series operation to rad isolation.

CCSSORIES: Various PMC rack adapters and accesories are available. (PMC AR-525 and related sees of accessories.)

PMC RC & RD POWER SUPPLY MODULES

High performance/Meet MIL Specs

FEATURES:

- All silicon solid state circuitry • MIL T-27 Transformer • 85°C Capacitors
- 100,000 hours MTBF
- Short circuit proof
- And more! Check the regulation and current handling abilities.

SPECIFICATIONS:

Input—105-125V AC, 47-420 CPS
Output—See Specific Model rating
Regulation—See Specific Model rating
Ripple—Less than 4MV RMS for RC
Less than 8 MV for RD
Operating Ambient Temperature— —20° to +71°C
Storage Temperature— —55° to +85°C
Output Adjustment—Internal pot
Cooling—None required within specified ambients
Polarity—May be either positive, negative or floating up to 300 Volts
Overload Protection—Solid state short circuit protected, auto-reset
Mechanical—Housing 3¼" x 3¼" x 5" with standard octal plug for input-output

RC SERIES, all models $65 RD Series, all models $55

POWERTWIN-99 TRACKING OP-AMP SUPPLY

ELECTRICAL SPECIFICATIONS:

INPUT—105-125 V AC 50-40 single phase.
OUTPUT VOLTAGE — 12.0-1 DC, 0.400 amps (each out
REGULATION— ±0.05%.
RIPPLE—1.0 MV rms (max.)
TEMPERATURE COEFFICIEN Better than 0.01%/°C.
OVERLOAD PROTECTION—Unit will withstand direct sho cuit across either output to common or across + to — put terminals for an indefinite period without dama the supply.
OUTPUT CURRENT vs. TEMPERATURE—Each output is for 0.400 amperes at 50°C ambient and is derated lin to 0.300 amps at 71°C.
WEIGHT—Net 3¾ pounds, Shipping 4¾ pounds.

MILITARY SPECIFICATIONS:

Designed to meet the environmental requirements of M 5272 and RFI requirements of MIL-I-6181.
Mean-Time-Between Failures—In excess of 100,000 per MIL HDBK 217.
MIL-T-27 TRANSFORMERS

ACCESSORIES:

The POWERTWIN-99 may be readily converted to a bench dual output power supply for lab use simply by removin front panel barrier strip assembly on the standard mode replacing it with the lab adapter front panel. The supply also be converted back to the standard module type a time. No soldering is required. The Lab Adapter kit c complete with panel shown and four rubber mounting Model number LD-1. Price $14.50.
An octal plug output also may be installed in place o barrier strip. This is easily accomplished without solde Model number OP-1. Price $4.00.

RA & RB Series Power Modules

Regulation 0.05% or 0.5%
Voltages 0 to 400
Current Outputs to 25 Amps

All Silicon Semiconductors Throughout
All Units Rated For Continuous Duty at —20° To +71°C Ambient
Short Circuit Proof—May Be Shorted Indefinitely Without Damage
Automatic Overload And Short Circuit Recovery
No External Heat Sink Or Cooling Required Up To +71°C
MTBF—Over 100,000 Hours
All Components Accessible And Replaceable For Maintenance
Top Quality Components And Rugged Construction
All Power Supplies Subjected To Rigorous QC Inspections

The RA and RB Series of modular power supplies provide regulated voltage outputs between 0 and 400 volts at output currents up to 25 amperes, at regulations of 0.05 or 0.5%, according to the model selected.

Silicon semiconductors are used exclusively in the power supply circuitry. This together with the internal heat sinking provided in the supply enables full load operation of the unit at ambient temperatures of 71°C without any additional cooling, heat sinking, and without derating.

The RA and RB Series power supplies are completely short circuit proof. The output may be short circuited indefinitely without damage. A unique circuit reduces the output current and voltage if the full load rating of the supply is exceeded. This not only protects the power supply, but serves to protect the load against further damage due to excessive current flow. The power supply automatically restores itself to normal operation after the short or overload is removed.

All components are accessible and replaceable in the field if required. All components are conservatively rated and are of the highest quality. For example, the electrolytic capacitors are 85°C types and the transformers are MIL-T-27 quality.

Connections at the connector permit either internal or remote adjustment of the output voltages. External connections also permit the remote sensing of the voltage directly at the load for improved overall load regulation on the RA Series.

SPECIFICATIONS:

Input—105-125V AC. 47-420 CPS.
Output—See Specific Model Listed
Regulation— ±0.05% or 2mv (whichever is greater) vs and load for RA Series; ±0.5% vs line and load fo Series
Ripple—Less than 0.002%, or 1mv RMS (whichever is gre for RA Series; 0.01% or 5mv RMS for RB Series
Response Time—50 Microseconds
Operating Ambient Temperature— —20° to +71°C
Temperature Coefficient—0.015%/°C or 1.8mv, whiche greater
Output Adjustment—Either internal or external as desired
Cooling—None required at specified ambients
Polarity—May be either positive, negative, or floating (300 volts)
Overload Protection—Solid state short circuit and ove protected, instantaneous recovery and automatic res
Mean Time Between Failures—100,000 hours typical, c lated according to MIL Handbook 217A
Military Specifications—Designed to meet the environm requirements of MIL-E-5272, and RFI requirements of I-6181

FOR VOLTAGES FROM 50 TO 400. AND DUAL POWER SUPPLIES (SERIES DRA & DRB), SEND FOR THE COMPLETE PMC RA AND RB SERIES CATALOG.

PMC BENCH PACS

23 different UniPower DC Laboratory Supplies, voltage & current regulated

FEATURES:

- High accuracy
- Regulation for **both** voltage and current
- Adjustable current limiting
- Five-way binding posts
- Concentric controls for coarse and fine voltage adjustment
- Constant voltage and/or constant current
- On/off switch
- AC indicator
- Easy-to-read dual meters
- Built-in short circuit protection
- Front panel remote sensing of output voltage (Models "E" thru "H")

You are sure to fill your lab and systems power supply ne s with Power/Mate Corp.'s economical new Bench Pac Ser . Twenty-three individual models cover from 0 to 60 volts d current up to 15 amps. The same field-proven designs d state-of-the-art solid-state silicon circuitry found in our wi y accepted UniPower Series and OEM Series power supplies p vide PMC Bench Pacs with maximum reliability. Thus, Be n Pacs carry Power/Mate's full five year warranty.

SPECIFICATIONS

INPUT: 105-125 Volts, 47-420 cps, single phase.

OUTPUT VOLTAGE AND CURRENT: See Respective Tables.

REGULATION:
Load: The regulation for load changes is less than .01% or 1 millivolt, whichever is greater from no load to full load.
Line: The regulation is less than 0.01% or 1 millivolt, whichever is greater, for a line change from 125V to 105V at constant load.

RIPPLE: Less than 250 microvolts.

TRANSIENT RESPONSE: For a ±10 Volt step change in line voltage or for a no load to full load, or a full load to no load step change, the output voltage will return to within 10 millivolts of the regulated region in less than 20 microseconds.

METERS: Voltmeter and ammeter, rated accurate to 2% of full scale value, are provided on the front panel.

POLARITY: The output may be "floated" up to 300V peak above ground. Either polarity may be grounded to chassis by means of terminals provided.

CONSTANT CURRENT/CONSTANT VOLTAGE: Constant current and constant voltage levels may be preset within the maximum rated voltage and current levels specified in appropriate tables. The intersection of the constant voltage and constant current operation lines called the "Crossover Point" may be located anywhere within the output volt-ampere range of the unit. Regardless of the demands of the load, the output voltage and/or the output current will never exceed the limits (1% or better) preset by the output voltage and output current controls.

CONTROLS
VOLTAGE: Continuously variable coarse and vernier DC OUTPUT ADJUST potentiometers on concentric shafts provide variable DC Output.
CURRENT: Continuously variable single turn potentiometer provides current limiting adjustment.

TEMPERATURE COEFFICIENT: Better than 0.01%/°C.

LONG TERM STABILITY: Better than 0.025% for 8 hours.

DUTY: Continuous at ambient temperatures from 0°C to 50 . Operation above 50°C is allowed provided the output c rent is derated 20% for every 10°C rise above 50°C.

REMOTE SENSING: Sensing terminals, separate from the C put terminals, provide sensing and load regulation agai t the voltage at the load rather than the voltage at the po r supply output terminals. This eliminates the otherwise avoidable load regulation due to the voltage drop in wires connecting the supply to the adjacent load.

REMOTE PROGRAMMING: The output voltage may be c trolled accurately from a remote point if desired by ins ing a resistance across the REMOTE PROGRAM termin . The sensitivity of this circuit is approximately 100 ohms volt.

PARALLELING: Two or more units may be operated in ser to provide higher voltage output at rated current. Units the same voltage and current ratings may be operated parallel.

PROTECTION: Load and power supply protection for any ov load condition is accomplished by an adjustable electro current limiting circuit controlled by a front panel pot tiometer.

MOUNTING: Unit is designed for bench operation. Howe Rack Adapters are available (see below).

AIRFLOW: All units are convection cooled and do not requ internal blowers or depend on internal forced air cooli

FINISH: Front panel is finished with dual tone grey and bla baked enamel. All other finishes are appropriate pai plating, or chemical film as required.

INSPECTION: MIL-Q-9858 Procedures.

ACCESSORIES

Bench Pacs can be rack mounted as required. Up to three Series "C," or two Series "D" power supplies will mount in a standard 19" rack, just 3½" high. Adapters available are: Model RK-118 for one or two Series "D." Price $22. Model RK-89 for one, two, or three Series "C." Price $22.

Consult factory for special systems configurations.

PMC RACKS AND ACCESSORIES

assemble your CUSTOM Power Supply system with PMC STANDARD modules, racks, and accessories

The "building block" approach to designing a custom power supply system provides a new dimension in design freedom for the engineer.

Now you can assemble a "special" power supply to fit your special application or system requirements with the wide assortment of STANDARD Power/Mate power supply modules, off-the-self mounting racks, metered and non-metered control panels, plus many other accessories.

In this way you get a "special" power supply, and you gain in reliability through the use of proven and industry-accepted STANDARD Power/Mate power supplies.

The economical, in-stock "building block" components and racks are shown below. They accommodate a variety of PMC modules in configuration in a standard 19" rack, 3½" high or 5¼" high, with five different styles. All are finished in durable, baked gray enamel, with predrilled and tapped holes, ready for easy assembly.

HOW TO ORDER

Determine the quantity of the various units you nee order them by Model Numbers shown below. Notice numbers ending in 35 represent the 3½" rack and ending in 525 indicate the 5¼" rack. In ordering me control panels, be sure to indicate meter ratings by a first the volt meter rating and then the ammeter rating the panel Model Number, i.e. CPM35-36-1.5 indicates a ter rack metered panel with a 0-36 voltmeter and a ammeter.

For further details, send for Power/Mate Corp.'s And Accessories Catalog (Form number 13-70).

ERVOLTAGE PROTECTOR

us on any Power/Mate power ply up to 34 amps. Self con- ed owbar type solid state unit. ep ent of power supply or type fail e. Output adjustable to trip we 3 and 60 volts. Trips within mic seconds.

nen ns 2⅞ x 3⅜ x 1

od OVP-2, Price $35.00

BARRIER STRIP ADAPTER

for use on UNI-TWIN-164 power supply. Adapts solder terminal output of dual supply to barrier strip screw terminal. Mounts directly on case in pre-punched holes. Includes hardware and cable.

Model BT-2, Price $8.00

BARRIER STRIP ADAPTER

for use on UNI-76 and UNI-88 power supplies. Adapts solder terminal output to screw type barrier strip terminals. Mounts directly on pre-punched holes in case. Includes hardware and cable.

Model BT-1, Price $4.00

Model AM35

Module Adapter permits the use of up to four POWER/MATE style R, RH, or N case supplies on one AR35 Rack Adapter.

Price $8.00

ADAPTER

for MOUNTING type A, B, C & D cases in AR525 rack. Permits mounting 3½ inch height modules in 5¼ inch mounting space on AR525 rack. Permits complete intermixing of both 3½ and 5¼ inch supplies in this rack. Complete with hardware.

Model A525-1, Price $6.00 per pair

RACK SLIDE

for use with all Power/Mate Corp. racks. Feature quick disconnect and ball bearing action. Includes hardware for mounting.

Model CS-1, Price $45.00

POWER INCORPORATED ALSO MARKETS:

Emergency lighting units.
Flashlight and lantern rechargeable batteries.
Custom and prototype design battery packs built to your specifications.
Battery chargers for all types of batteries.
Batteries - **NICKLE CADMIUM - SILVER CADMIUM - SILVER ZINC - MERCURY - SEALED LEAD-ACID.**

All cylindrical and oval battery typ feature a pressure safety device for sec rity and reliability making them especial suited for cordless consumer and ele tronic products.

CUSTOM BATTERY PACKS

Cylindrical cells are incased in a rigi high impact case. Case materials a highly dielectric to provide maximum ce insulation at minimum cost. The case vented to each cell to provide cooling a long life. Packs are available to yo specifications in any voltage.

Button cell batteries are constructed sealed nickle cadmium button cells (s fig. B) to meet almost any applicati requirement. The compact size of butt cells permits easy stacking to form m tiple cell batteries of optimum powe volume ratio and space utilization. Co pletely sealed button cells are ideal suited for portable radios, flashlight photoflash, alarms, and any low-drai high capacity application.

TYPICAL BUTTON CELL BATTERIE

INVESTIGATE direct current emergen power sources available in any regulat voltage or current, featuring automatic SC solid state switchover to a self-contain battery. We have the answer to reliab economical D.C. power with automat emergency back-up.

MR. BATTERY SAYS: ®

"We have over 10,000 cell and battery sizes in stock. If you don't see exactly what you are looking for here, let us know, chances are we'll be able to take care of your application immediately. We'd be happy to answer any questions. If we can't help you, no one can."

Miniature Power Converter for Analog and Memory Applications:

Mode 301

±12 to ±15 volts @ 3 amps or 12 to 15 volts @ 6 amps or 24 to 30 volts @ 3 amps
1.60 x 5.14 x 10.6 inches, 94 cubic inches

FEATURES

- 90 watts in 94 inches
- Dual outputs
- High Efficiency Cir
- Fast Transient Res
- Current Limited, Sh Circuit Proof
- Multiple Output Ch
- Completely RFI filt
- 115 VAC input

DESCRIPTION

The RO 300 series is designed specifically for analog and memory circuit application. In this single unit, there is a large choice of output voltages, dual and single, at full output power. This amazing flexibility is coupled with RO's high efficiency circuitry utilizing 20 KHz techniques, re in extremely small size. These units supplement the F series for digital applications.

SPECIFICATIONS

DC Outputs
*A. ±12 to ±15 VDC @ 3A each side or B. 12 to 15 VDC @ 6A or C. 24 to 30 VDC @ 3A

*All outputs available by choice of connection. When using both plus and minus outputs at same time, any combination of 6 amps can be taken from both polarities.

Input
103 to 130 VAC, 50 to 1000 Hz (Also 115 to 170 VDC)

Efficiency
65% typical at ±15 VDC at ±3 amps output

Regulation
±0.01% for ±10% change in line 0.1% zero to full load, + and − tracking

Ripple and noise
Less than 500 microvolts RMS Less than 10 millivolts peak to peak

Transient response
For no load to full load switching, recovery is less than 20 microseconds ,and peak excursions are less than 200 mv typical

Protection
Power supply is protected against continuous overlo short circuit conditions, by electronic current limit ci

Temperature stability
Better than .015%/°C

Cooling
Unit will provide full output with **no** (air or cond cooling up to an ambient of 30°C.
Full output is obtainable if base plate is maintained a

Operating temperature
−20° to +75°C (see above cooling spec.)

Size
5.26″ x 10.6″ x 1.69″ (94 cubic inches)

Mounting
Mounting on 5″ x 10″ surface with 6 threaded size 10-32

Weight
3 lbs.

Price $350.00.

Delivery Stock to 60 days.

Miniature Power Converters for Digital I.C. and Analog Circuits:

200 Series

20 SERIES

FEATURES

- 55 watts in 45 cubic inches
- 5 1/16" x 4" x 2 1/4", weighs 2 lbs.
- Multiple outputs
- 70% efficiency
- Fully protected
- 20 KHz operation, no audible noise
- RFI filtered
- 110VAC INPUT
- 48VDC INPUT AVAILABLE

COMMON SPECIFICATIONS

INPUT
105 to 130 VAC, 50 to 1000 Hz or 160 VDC ±10%
48 VDC input available.

Protection
All outputs current limited, continuous overload and short circuit proof. 5 volts outputs have self recovering overvoltage protection set at 6.8 to 7 volts, no overvoltage protection on other outputs.

Temperature Stability
Better than 0.01%/°C

Cooling
Maximum mounting base temperature for full output is 85°C. For no (air or conductive) cooling, max. ambient temperature of 30°C for full output. Derate linearly to 60% power at 60°C ambient and no cooling.

Operating Temperature
−20°C to +85°C

Remote Sensing
On model 210 only

MTBF
Over 100,000 hours calculated in accordance with MIL-HDBK-217A

Size
5 1/16" x 4" x 2 1/4", 45 cubic inches

Weight
2 pounds

Mounting
Mouting available on 3 sides by 4, #6-32 tapped inserts

Model	DC Out - Volts, DC	Amps	Regulation		Ripple & Noise	Price 1 - 99
			Load*	Line ±10%

CALIFORNIA 94025

03

FEATURES

- Excellent Transient Response
- Low Line and Load Regulation
- Adjustable Voltage
- Current Limit Short Circuit Protection
- High Speed Crow Bar Overvoltage Protection
- Convection Cooled

LOW COST
2.5 TO 25 AMP
FROM $59.00

05

SPECIFICATIONS

DC output
4.5 to 5.5 volts adj (3.6 volt models available) 2.5 to 25 amps

Input
105 to 125 VAC, 45 to 440 Hz

Regulation
±0.1% for ±10% change in input voltage less than 0.25% for zero to full load change

Ripple and Noise
Less than 1 mvpp (603 has 4 mvpp max)

Transient response
125 mv for 30 μsec for change of half-load to full-load current or vice versa. 250 mv for 30 μsec for change of no-load to full-load current or vice versa.

Power supply protection
Current limited at 120% of rated load: short circuit proof

Cooling
By convection, no forced air required

Operating Temperature
−25° to +55°C, to +70°C at 80% current

Load protection
Optional fast response crow bar, will not exceed adjustable trip point voltage for transients with rise times slower than 0.2 volt/μsec

Will not exceed static trip point volts for more than 200 nanoseconds for step function over-voltage

Remote Sensing
Sensing terminals provided to enable specific regulation directly at load

Stability
Output voltage changes less than 0.05% over a 24 hour period after warm up

Temperature coefficient
Output voltage changes less than 0.05%/°C over −25° to +55°C ambient

Output impedance
See regulation and transient response specifications

Controls
Built in potentiometer adjusts output voltage ±10% with resolution of 15 mv

SOLA ELECTRIC SB

DIVISION OF SOLA BASIC INDUSTRIES

SOLATRON® ±½% LINE VOLTAGE REGULATORS

What It Is

The Solatron® LVR is the first regulator to combine in one unit the qualities of **fast response, "tight" voltage regulation, no moving parts, adjustable output, remote sensing, compactness, and high KVA capacity.**

The Solatron is a solid-state device with no moving parts, requiring no adjustment, maintenance, or attention. It combines the ruggedness typical of transformers with the light weight of electronic control circuitry, resulting in a regulator of remarkable compactness. It has great versatility in mounting, and installation.

Solatron® regulators are available as standard units in KVA ranges from ½ to 500 KVA, and yet they furnish a degree of regulation associated in the past with small VA capacity constant-voltage transformers and power supplies.

Units are available for single or three-phase applications, for either delta or wye connection depending on the service available or the load requirements of your equipment.

And What It Does

Regulation: ±0.5% for line changes. ±1% maximum for any combination of line, load, temperature and frequency changes within limits listed below.

Variation limits: line ±10%, or + 10%/—20%. Frequency 57-63 cycles, 47-53 cycles, or 380-420 cycles depending on model chosen (see catalog listings). Load zero to full load. Temperature 15° to 40°C.

Response: correction begins in first ½ cycle and is typically 100% complete in less than 10 cycles of the AC frequency.

Harmonic content: no harmful wave-form distortion.

Adjustable output: output voltage is adjustable ±10% of nominal output voltage.

No maintenance: contains no relays, switches, contacts, solenoids, tap, bearings, or other moving parts. No drive motors, servos, or hand cranks. Requires no maintenance: operates completely unattended.

Current capability: withstands high inrush load currents and momentary overloads.

Motor loads: will handle inrush starting current without serious voltage collapse; provides adequate starting torque; no necessity to oversize KVA rating.

Mounting flexibility: may be mounted on wall, floor, or in equipment being regulated. Large terminal compartment, stud or screw-type terminals, knockouts for ease of wiring and installing.

Remote sensing: sensing leads easily connected to load for remote location of Solatron® LVR or for line drop compensation where desired.

SINGLE-PHASE (60 Hz ±3 Hz)

FOOTNOTES

1. At unity power factor and nominal output voltage. Although the KW efficiency is greater than 90%, the VA efficiency under worst-condition operation can be 60% for +10/—20% input voltage range units.
2. The output voltage regulation is ±0.5% for line voltage changes or ±1% for any combination of line voltage, frequency, load or temperature changes within the limits specified.
3. The output voltage adjustability is accomplished by an internal multi-turn potentiometer. Regulation in accordance with note (2) will be maintained at any output voltage setting within the specified adjustable range.
4. The input voltage range (either ±10% or +10/—20%) is based on the output voltage setting. The output voltage is adjustable ±10% of the rated nominal output by means of an internal multi-turn potentiometer. Therefore, the input voltage range shifts lineally with the setting of this control.
5. Maximum additive RMS harmonic content at nominal frequency.
6. 3% maximum additive RMS harmonic content may be obtained by using an auxiliary harmonic filter. See selection chart A.
7. 3% maximum additive RMS harmonic content may be obtained by using three auxiliary harmonic filters (one each line-to-neutral). See selection chart B.
8. 3% maximum additive RMS harmonic content may be obtained by using three auxiliary harmonic filters (one each line-to-line). See selection chart C.
9. Special sensing circuit filters must be ordered when feeding a rectified load. These are furnished at no additional charge.
10. F.O.B. Goldsboro, North Carolina. All other units are F.O.B. Elk Grove Village, Illinois.
11. The lowest line-to-line load should not be less than 70% of the highest line-to-line load, and the highest line-to-line load equal to, or less than, ⅓rd of the three-phase delta nameplate KVA rating. Additionally, the lowest line current should not be less than 90% of the highest line current.

EOLA® CVDC power supplies, available off-the-shelf.

Sol offers a wide range of CVDC type power supplies whi are available from stock of your local electronic par distributor or the factory. These standard desig are available in any quantity and are the result of Sla custom engineering efforts.

Inherently highly reliable, the CVDC supplies are rugedly built and use simple circuitry. Fast and dependable regulation, current limiting, and high efficiency are provided by the heart of the supply: the famus Sola Constant Voltage Transformer.

CHARACTERISTICS

- Fst, dependable line-voltage regulation: within ±1% f fluctuations of ±15%; voltage will return to regul on envelope in approximately 50 milliseconds.
- Lad regulation: from 1/2% to 8%, one half to full lad.
- Atomatic current limiting: short circuit protection; vhstands load faults; high overloads cannot damage pwer supply or equipment components.
- Hgh efficiency: upwards of 75%; low input-power rquirements.
- Snplified operation: no adjustments or maintenance; cntinuous duty.
- Cnvection cooling.
- Fple: 1% rms maximum.
- Ambient operating temperature: 50° C maximum.

Constant-voltage Sola transformer provides ±1% regulation for line voltage variations as great as ±15%, serves as the heart of CVDC power supplies for voltage-sensitive equipment.

Sierra Systems, Inc. specializes in the production of high voltage power supply modules for critical cathode ray tube applications. These units are constructed with all silicon diodes and transistors for reliable operation and include such features as current limiting and short circuit protection. Custom requirements are processed with the speed and at the price of off-the-shelf items while requirements such as miniature high voltage power supplies and units designed for military specifications are easily met. Sierra Systems, Inc. has the in-house capability to produce thick film integrated circuits . . . a process which permits quick and economical response to unusual packaging requirements and large volume orders. Contact S.S.I. the next time you need a high voltage power supply.

Also leading manufacturer of other types of High Voltage Power Supplies and R. F. Amplifiers and systems.

NOTE: All prices above are U.S.A. list.

Notes:

1. The following 19" adapter panels are available for QRS, QRD, QHS and QRD Dual Range units at $15 per panel:
   One unit panel (3½" high): RP12
   One unit panel (5¼" high): RP13
   One unit panel (7" high): RP16
   Two unit panel (3½" high): RP14
   Two unit panel (5¼" high): RP15
   Two unit panel (7" high): RP17
   For QRC 40-4A a one unit 19" adapter panel (RP1) and a two unit 19" adapter panel (RP2) are available at $15 per 5¼" panel.

†Two completely isolated power supplies mounted in one cabinet. Both outputs may be operated simultaneously and each output at either of two output ranges.

* *PARD*—"The 'Periodic and Random Deviation' of the output DC voltage, current or power from its average value, with all external operational and environmental parameters maintained constant."

Notes:

2. Also operates in High Speed Mode. Programming Time: 25 μs from zero to Emax; 10 μs from Emax to zero (measured at the 10% and 90% points).
3. Drift for 8 hours
   QHS 20-1 — 10 ppm + 100μV
   QHS 40-.5 — 10 ppm + 100μV
   QHS 100-.2 — 10 ppm + 100μV

   Drift for 1 week
   QHS 20-1 — 35 ppm + 200μV
   QHS 40-.5 — 35 ppm + 200μV
   QHS 100-.2 — 35 ppm + 200μV

Single and dual 19" adapters available for QRS, QRD, QHS and QRD Dual Range models. See note 1.

Dual 19" Rack Adapter

DCR Series
Full Range, Silicon Controlled Rectifiers (meets MIL-I-26600 and MIL-I-6181D)

Notes:

4. Ripple and transient specifications apply at 60Hz and will vary by a factor of $(60/f)^2$ where "f" is the input frequency.
5. Optional auxiliary chassis permits operation from 342-418, 390-440 or 414-506 Vac input: ST101 $250
6. DCR40-250A, DCR150-70A, DCR300-35A and DCR600-18A input voltages: 187-229Vac, 207-253Vac, or 414-506 Vac, at 57-63Hz (0-100% Eo max)
   390-440Vac at 47-63Hz (0-100% Eo max)
   342-418Vac at 47-63Hz (0-90% Eo max)
   DCR20-1000A and DCR40-500A input voltages:
   342-418Vac at 47-63Hz (0-75% Eo max)
   390-440Vac at 47-63Hz (0-92% Eo max)
   414-506Vac at 57-63Hz (0-100% Eo max)

Notes:
7. The following 19" adapter panels are available for QSB 7 1/16" wide units at $15 per panel:
   One unit panel (3½" high): RP5
   Two unit panel (3½" high): RP6

■ Temperature Range: —20°C to +71°C. ■ Series Operation: Up to 200 volts maximum. ■ Parallel Operation: QRE models . . . 4 units maximum; QSB models . . . 20 units maximum. ■ RFI: Meets MIL-1-6181D and MIL-1-16910C. ■ Overload/short circuit protection. ■ Remote sensing. ■ Overvoltage protection: Standard on QRE models and QSB12-30, optional accessory for QSB models (see chart above).

**PARD*—"The 'Periodic and Random Deviation' of the output DC voltage, current or power from its average value, with all external operational and environmental parameters maintained constant."

NOTE: All prices above are U.S.A. list.

AC line voltage regulators

ACR Series
Silicon Controlled Rectifiers
(Meets MIL-I-26600 spec. for Class III equipment)

FR Series
Precision, Solid State
AC Line Voltage Conditioners

Notes:

8. ACR models are furnished for standard rack mounting (ACR500 is furnished in self contained cabinet or with optional $15 rack panel – RP7.) Optional cabinet end bells may be furnished at $50 for models ACR3000, ACR5000, ACR7500, ACR10,000 and ACR-15,000.
9. 115 Vac output optional at additional cost.
10. With constant load, line and ambient temperature (ACR models 8 hours, FR models 24 hours).

Notes:

11. Line regulation available — Option #C2 regulates the output to ±0.2% (For ±10% line change). $475
12. Ripple attenuator available — Option #L2 reduces the output ripple to 0.01% rms.
13. 1000 Series Controller supplied for rack mounting. 5000 Series is furnished as standard rack mounted unit with optional $50.00 cabinet side enclosures.

NOTE: All prices are U.S.A. list.

E UP TO THE ST ADVANCED GENERATION F STATIC INVERTERS!

STATIC PRODUCTS

OR NTERRUPTIBLE OWER YSTEMS

OF REQUENCY NVERTERS

Specify

STATIC PRODUCTS

25 KVA
Uninterruptible
Power System

Static Products has developed unique Static Inverters which combine advances in high speed thyristors (SCR) and integrated circuits. These inverters offer improved performance, reliability and lower cost than older methods. Extensive use of integrated circuits affords more sophisticated methods to improve short circuit, overload, fuse clearing and transient response capability. Check these resulting advantages:

EFFICIENCY

The inverter efficiency exceeds 90%, generating less heat and providing substantial electric cost savings over the ten year equipment life.

POWER RANGES

Inverter modules of 5, 25, and 75 KVA are available and can be paralleled to supply single and three phase loads, 5 through 300 KVA.

EXPANDABILITY

The power capability of Static Products' systems can be expanded by modular additions to meet increased load requirements.

INPUT/OUTPUT

Virtually any combination of voltage and frequency input/output is available, including 60/400 Hz, 400/60 Hz, 50/60 Hz, 60/50 Hz, and 60/60 Hz uninterruptible power systems, 5 through 300 KVA.

UNINTERRUPTIBLE POWER

Static Products provides battery chargers, transfer switches, and inverters completely packaged as shown. These systems maintain AC power to the load without **any** interruption, regardless of utility fluctuation or outage.

SPACE SAVING

The 25 KVA uninterruptible power system, including battery charger, transfer switch and static inverter occupies only 5 square feet of floor space and is less than 72 inches in height. The 75 KVA system is 72 inches in height and occupies only 10 square feet.

Technical literature pertaining to the evolution of fourth generation static inverters, pulse width modulation, and a detailed reliability report is available. Please contact Mike George, Vice President of Marketing for detailed specifications and application information.

REGULATED D.C. POWER SUPPLIES HIGH PERFORMANCE/LOW COST

MODEL 1500-1

ADJUSTABLE VOLTAGE — 0 - 16 Volts or 0 - 32 Volts Dual
ADJUSTABLE CURRENT — 0.05 - 1.5 Amps (both sides)
$145.00 F.O.B.

MODEL 1500

HIGH CURRENT — 1.5 Amps Dual
ADJUSTABLE VOLTAGE — .75 - 16 Volts or 1.5 - 32 Volts Dua
FLASHING OVERLOAD INDICATOR — Both Sides
$115.00 F.O.

MODEL 100 SINGLE

ADJUSTABLE
±16V DC at 1.0 Amp
$45.00 F.O.B.

NEW! POWER SUPPLY TESTER

- 300 WATTS PER SIDE
- PROTECTED
- ULTRA STABLE
- EXT. MODULATE

MODEL 500 DUAL

ADJUSTABLE — ±16V D.C. at 0.5
ADJUSTABLE — ±16V D.C. at 0.5
$69.00

HI-PAK POWER SUPPLIES

-51000-B-C
163.00 (1/4), $97.80 (1000 up)
to 6 Volt at 10 Amp.
00μV(RMS)
05/125 Vac-50/60 HZ
025V
005V
-7/8 x 3-3/4 x 9-3/4
Over Voltage/Fan/71°C

HM-53000-B-C

Price	$212.00 (1/4), $127.20 (1000 up)
DC Output	3 to 6 Volt at 30 Amp.
Ripple-Out	2 MV(RMS)
AC Input	105/125 Vac-50/60 HZ
Reg. NL/FL	.06V
Reg. VS Line	.005V
Size (WXHXL)	6-7/8 x 4-7/8 x 10-3/4
Features	Over Voltage/Fan/71°C

H-12400

Price	$68.00 (1/4), $40.00 (1000 up)
DC Output	12±1VDC at 4 Amp
Ripple-Out	30 MV(RMS)
AC Input	105/125 or 210/250 VAC-50/1000 HZ
Reg. NL/FL	±2%
Reg. VS Line	±1%
Size (WXHXL)	5-7/8 x 3-3/4 x 8"
Features	Short/Thermal Protection

H-12700

Price	$98.00 (1/4), $60.00 (1000 up)
DC Output	12±1 VDC at 7 Amp
Ripple-Out	5 MV(RMS)
AC Input	105/125 or 210/250 Vac 50/1000 HZ
Reg. NL/FL	±2.5%
Reg. VS Line	±1%
Size (WXHXL)	6-7/8 x 4-7/8 x 9
Features	Short/Thermal Protection

HM-24700-C

Price	$170.00 (1/4), $102.00 (1000 up)
DC Output	20 to 25 VDC at 7 Amp
Ripple-Out	500μV (RMS)
AC Input	105/125 VAC-50/60 HZ
Reg. NL/FL	±0.05%
Reg. VS Line	±0.03%
Size (WXHXL)	6-7/8 x 4-7/8 x 10-3/4
Features	Fan/71°C

NEW!! HM-55000-B-C

Price	$395.00 (1/4), $237.00 (1000 up)
DC Output	2 to 5.2 VDC at 50 Amp.
Ripple Out	1 MV (RMS)
AC Input	105/125 VAC-50/60 HZ 210/250 VAC-50/60 HZ
Reg. NL/FL	.01% + 1 MV
Reg. VS Line	.01% + 1 MV
Size (WXHXL)	7-1/16"x6"x11-1/2"
Features	Overvoltage, Fan operation to 50°C.

SPELLMAN
HIGH VOLTAGE POWER SUPPLIES

for industry, science instrumentation, education, aerospace, defense, displays

RACK MOUNTED

Spellman High Voltage Power Supplies are the result of more than twenty years of development and refinement. Employing high frequency oscillator circuitry with an exclusive low stored energy feature, Spellman HV power supplies ensure low corona, low leakage, and long trouble free life.

- All Solid State, Silicon Semiconductors
- Short Circuit and Overload Protected
- High Performance—0.01% Regulation*
- Low Price
- Available with positive, negative or reversible polarities. Polarity indicated by P, N, or PN.
- Fast Delivery
- Kilovoltmeter and Milliammeter
- Precision Multiturn Potentiometer enables adjustment from zero to rated voltage with 0.02% resolution**
- Focus Tap Option on 30KV and 40KV units indicated by PF.

Table above is an abbreviated listing of standard models. Other units up to 150KVDC and 30KW are also available.

60 Cycle Heavy Duty PORTABLE POWER SUPPLY

0-60 KV DC

Low priced stock item for industrial process and test applications.

Provided with kilovoltmeter.

MODEL NO.	ST-60	PF-60
Input	115V. RMS 60Hz Single Phase	
Output Voltage	Continuously adjustable from 0-60 KV DC	
Output Current	250 microamps at 60 KV 1 milliamp max. below 20 KV	50 microamps at 60 KV 250 microamps max. below 20 KV
Ripple	Less than 2% RMS at rated voltage	
Polarity	Positive with respect to ground	Negative with respect to ground
Size & Weight	11″w x 18″d x 11″h carrying case with handle. Net weight 40 lbs. Shipping weight 55 lbs.	

SOLID STATE DC POWER SUPPLY for LASERS

15 KV @ 250 ma.

- Input 115 V 50 amp. AC
- Output 15 KV DC @ 250 ma.
- HV floating full wave bridge
- Either negative or positive may be grounded or left floating
- Ideal for gas laser or condenser charging

Model RS-21 .....$575 Net

DC-TO-DC MINIATURE ENCAPSULATED HIGH VOLTAGE MODULES

for CRT and Photomultiplier uses and other applications requiring modular packaging.

Dimensions include mounting flanges. Units fully encapsulated.

MODEL TRF10
High Voltage
STEP-UP COIL

for transistor drive circuits

OUTPUT TO 10 KV DC @ 1 ma.

Coil driven by single transistor self-oscillating circuit • Input voltage up to 28 V DC approx. 1 amp. • Coil height—4 1/4" • Diameter—3" • Approx. operating frequency 120 KHz
Higher voltages available when used with proper rectifier/multiplication circuit.

Complete with technical data and schematic diagram for construction of self-oscillating RF circuit at approximately 120kHz. Other coils available for vacuum-tube circuits.

Model TRF10 ....$29.75 Net

ELECTROSTATIC FLOCKING SYSTEMS

Through our specialized work in high voltage technology we have established a reputation as a leading source for electrostatic flocking systems. We now produce a variety of electrostatic flocking systems for manual and production line use. Spellman Model PB-3 for flat surface flocking and Spellman Model PB-4 for three dimensional flocking are available off the shelf.

CUSTOM AND SPECIAL PURPOSE DESIGNS

Over the years, we have developed and built many thousands of custom power supplies, in hundreds of non-standard mechanical configurations, and hundreds of non-standard ratings. We are prepared to quote promptly and accurately, and deliver on short schedules as well, on most custom requirements.

MODEL PB70AC
HEAVY DUTY ELECTROSTATIC FLOCKING SYSTEM

- Latest AC electrostatic flocking technique
- Stepless variable speed from 0 to 30 ft/min
- High voltage AC power supply
- Heavy neoprene belt conveyor

STABILINE® automatic VOLTAGE REGULATORS

TYPE IES9101

TYPE EMT10228

TYPE EMT4115B

Deliver a constant output voltage regardless of variations in input voltage or changes in line current. Types available from 0.25 to 275 kva. Submit specifications for ratings desired but not given in the charts. Input voltage ranges shown are at nominal output voltage; input range shifts with output voltage setting.

EMT SERIES – Electro Mechanical Transistorized types with virtually zero waveform distortion, 47-63 hertz frequency range, very low internal impedance, negligible phase shift and efficiency approximately 99%. Rated accuracy ±.75% for all line voltage or load current variations within unit stated range. Insensitive to load magnitude and power factor; no effect on system power factor.

EMS SERIES – Electro Mechanical Transistorized types for heavier load requirements. Same operating characteristics as EMT Series. Units with letter I before first digit in type number have individual control for each line-to-neutral voltage.

EMK SERIES – Electro Mechanical Transistorized types providing faster correction times than other electromechanical models.

IES SERIES – Instantaneous Electronic Solid-State types having extremely fast correction, no moving parts. Will maintain output voltage within a 100 millivolt rms band for any combination of rated input voltage and/or load from 1.0 to 0 power factor lagging. Efficiency to 95%. All units have provision for remote sensing and have plug-in solid-state circuit boards.

MILITARIZED – Meet requirements of applicable military specifications. Type EMTH41007MH is 3½ x 6 x 4½"; type EM4108MCR fits standard 19" relay rack. Accuracy ±1.0%.

STABILINE® Full Range REGULATOR CONTROLLERS

TYPE FR500MP

Designed for use with any motor-driven POWERSTAT Variable Transformer. Provide *full range:*

REGULATED AC VOLTAGE – Output voltage will remain within a 2-volt band when used with 120 volt unit and a 4-volt band when used with 240 volt types.

REGULATED AC CURRENT — Current can be regulated accurate within ±1% of maximum current setting with user supplied current transformer and Superior Electric transformer type T6049.

REGULATED DC VOLTAGE – Type FR500DC with a user-supplied d-c power supply will provide regulated d-c voltage.

▲At 400 Hertz.
†Also available as rack model (suffix R when ordering).
◀For 60 Hertz operation only.
*Can also be operated on an input range of 95 to 135 volts with a rating of 57 amperes, 6.6 kva and a correction rate of 0.075 seconds per v
§Also available as rack (suffix R when ordering) or wall mounted (suffix W when ordering) models.
‡Unit can be converted for 208 volt operation by simple tap changes. Input and output voltage ranges change proportionally.
**At nominal output. Shifts with output voltage setting but not proportionally.
††Also available in open construction (suffix U) and with screened and enclosed (suffix UT) construction.
‡‡At nominal output. Shifts proportionally with output voltage setting.

PK SERIES
POWER MODULES

0 to 32VDC, Up to 80 watts

- AMBIENT RATED
- CONVECTION COOLED
- IC CONTROL CIRCUITRY
- EASILY SERVICED
- MULTI-SURFACE MOUNTING

NPK (NARROW RANGE)

WPK (WIDE RANGE)

DPK (DUAL WIDE RANGE)

TDPK (TRACKING DUAL WIDE RANGE)

DESIGN PARAMETERS (Typical)

Recovery time: Less than 50 μsec, 1/2 L to FL.

M.T.B.F. for product line: 60,000 hrs. per MIL-HBK-217A with module stressed at 71°C and rated load.

Designed to meet MIL environmental specifications:
Vibration — MIL-STD-202 Test Method 210A;
Shock — MIL-STD-202 Test Method 205C;
Moisture Resistance — MIL-STD-202 Test Method 103;
RFI — (Radiated & Conducted) — MIL-I-16910.

OPTIONAL FEATURES

	SUFFIX
Fixed output voltage	F
Lower temperature coefficient	T
Wide input range	W

208 and 230VAC input available — consult factory

Fungus proofing — consult factory

SPECIFICATIONS

Input voltage range: 105-125 volts.
Input frequency range: 47-420 Hz.
Regulation-Line and Load Combined: 0.05% + 2 mv.
Ripple (RMS): (with either positive or negative ter grounded): 1 mv
Temperature Coefficient: 0.03%/°C or 2 mv/°C whiche greater.
Polarity: May be used positive or negative.
Output voltage and current: See model listings.
Output adjustment range: See model listings.
Remote programming resistance: 350 ohms/volt nominal
Short circuit protection: Automatic circuit protects the supply if the output is shorted continuously. Auto return upon removal of the short circuit.
Characteristic curve for short circuit protection:
NPK models — Figure 1
WPK models — Figure 2
DPK or TDPK models — Figure 3
DC output control:
NPK and WPK models: Screw driver adjustment over age range specified in model listings.
DPK models: Each output can be adjusted indepen by dual screw driver adjustments.
TDPK models: Both outputs adjusted simultaneous single screw driver adjustment.
Remote sensing: Provisions are made for remote sensi eliminate effects of lead resistance on DC regulation.
Series operation: The series starting circuitry employe quires that input AC voltage be applied at a rate g than 150V rms/sec. Consult factory if slow rising in anticipated.
Operating temperature: —20°C to +71°C for maximum current ratings specified in model listings.
Storage temperature: —62° to +85°C.
Overvoltage protection: Available for all models as an ac ory. Provides both transient and power supply malfu protection.
Tracking accuracy (TDPK models): Each output will be fa set within 1.0% of the other. Outputs will track 20.0 mv or ±0.05% (whichever is greater) of each during pot adjustment.

LTAGE OPTION:

OP-1 OVERVOLTAGE PROTECTOR

$25

- Miniature size (5/8x1 1/16x3 1/4)
- One model fits cases 1, 2, 3, 4
- Mounts conveniently to PK supply
- Adjustable overvoltage trip point

e overvoltage protection for all models of case sizes 1, 2, 3, and 4 of the s. Installed on a PK series supply, the OP-1 offers full overvoltage pro- rom both transients and power supply malfunctions.

OP-1 Over voltage protector mounted on size 1 power supply.

CX-95

POWER MODULES

VERSATILE, MINIATURE DC-DC "POINT-OF-LOAD" SERIES REGULATORS

DESIGN PARAMETERS (Typical)

- Current up to 4 amperes.
- Short circuit protection.
- Adjustable output voltage.
- Positive & negative regulators.
- Input ripple reduction.
- Wide range of output voltages.
- Miniature packaging—flat pack design permits card type mounting.
- Temperature coefficient: 0.04%/°C
- Recovery time: Less than 50 μs ½L to FL
- Output impedance: See impedance curve below.
- Load capacitance: Up to 6000 mfd ÷ E_{nom} permissible.
- Low cost.

SPECIFICATIONS

Input voltage: See model listings below.

Output voltage: See model listings below. Output voltage is fixed at factory at nominal setting ±3% and is adjustable by external resistor or 200 ohm potentiometer.

Output current: Up to 4 amperes maximum (see formula and table on next page).

Regulation: Line: 1.0 mv +(0.05% Eo per volt input change)
Load: ±0.5%.

Output ripple (mv rms): 1.0 mv + (0.1% E out DC per volt RMS of input ripple). (up to 1 KHz).

Output adjustment range: ±5% of nominal setting.

Temperature: Storage: —55°C to +100°C
Operating: Ambient —20°C to +85°C
Base —20°C to +95°C

Isolation: None. "P" type models provide control in positive line, with negative line common between input and output. "N" type models provide control in negative line, with positive line common.

Short circuit protection: Protected for continuous short circuit conditions. Temporary removal of DC input after short will return module to operation.

TECHNIPOWER, INC.
A BENRUS SUBSIDIARY
Ridgefield, Conn.
06877

O DETERMINE MAXIMUM ALLOWABLE OUTPUT CURRENT (NOT TO EXCEED 4 AMPS.)

IBIENT TEMPERATURE RATING FORMULA — (WHERE AMBIENT TEMPERATURE IS A KNOWN VALUE)

$$\text{amps out max.} = \frac{130 - \text{known ambient temp.}}{\theta\,(E\text{ in max} - E\text{ o min})}$$

THERMAL RESISTANCE TABLE (θ)

Type Of Heat Sink	Natural Convection	FORCED AIR COOLING — LFM ACROSS CHASSIS OR THROUGH HEAT SINK			
		100	200	400	600
None	14	—	—	—	—
Chassis*	4.7	4	3.6	3.3	3.2
Thermal Radiator No. 140-0895	4.7	3.7	3.2	2.9	2.8
Thermal Radiator No. 140-0747	8	5.3	3.6	3.3	3.2
Other	2.2 + Thermal Resistance of Heat Sink (To Base of CX-95)				

*Chassis heat sink refers to flat aluminum 1/16" thick plate extending 3" beyond each side of the CX-95 base dimensions. Refer to Technipower thermal section in catalog for additional information on heat sinking.

Imple:

A. Output required: 6VDC at 3 amperes
B. Input voltage range: 10VDC to 12VDC
C. Ambient temperature: 40°C
D. Positive regulator desired with negative line common between input and output.
E. To be used with thermal radiator 140-0895. No forced air cooling available.

1. - Eo is 6 VDC, E in maximum is 12 VDC, Tamb is 40°C and from the thermal resistance table, is 4.7 for thermal radiator 140-0895 utilizing natural convection cooling.
2. - Inserting these factors in the formula results in:

$$I\text{ out} = \frac{130\text{-}40}{(4.7)\,(12\text{-}6)} = 3.19 \text{ amperes}$$

3. - Therefore, with 40°C ambient natural convection cooling and thermal radiator 140-0895, a CXP 6.0-4.0 module may be used up to 3.19 amperes, thus satisfying the required operating conditions. If forced air is available, a lower thermal resistance factor may be used, thereby allowing higher operating output current.

BE TEMPERATURE RATING FORMULA — (WHERE CX-95 BASE TEMPERATURE IS A KNOWN VALUE)

$$\text{amps out max} = \frac{130 - \text{known base temp.}}{2.2\,(E\text{ in max} - Eo\text{ min})}$$

ample

A. Output required: 6 VDC at 3 amperes
B. Input voltage range: 10 VDC to 12 VDC
C. Maximum base temperature of CX-95 is 80°C
D. Positive regulator desired with negative line common between input and output.

1. - E out minimum is 6 VDC, E out maximum is 12 VDC, known base temperature is 80°C.
2. - Inserting these factors into the formula results in:

$$I\text{ amps out max} = \frac{130\text{-}80}{2.2\,(12\text{-}6)} = 3.8 \text{ amperes}$$

3. - Therefore, with a known 80°C base temperature, a CXP 6.0-4.0 module may be operated up to 3.8 amperes, thus satisfying the required operating conditions.

Fully epoxy encapsulated	K
Sealed internal potentiometer	P
Remote sensing	R, Y
Lower temperature coefficient	T, TT
Off ground operation	U
Wide input range	W

Special cases, shapes and finishes

SPECIFICATIONS

Input voltage range: 105-125 volts.
Input frequency range: 50-400 Hz.
Regulation — Line ±0.05% — "A" models.
and load combined: ±0.5% — standard models.
Ripple: "A" models — 0.002% or 1 mv rms, whichev is greater, with 60 Hz input; 0.004% or 3 mv rms whic is greater, with 400 Hz input.
Standard models — 0.01% or 5 mv, rms, whichever is gre with 60 Hz input; 0.04% or 10 mv, rms, whichever is gre with 400 Hz input.
Output adjustment range: 10% (screwdriver adj. in base 80% of rated load the output may be adjusted a full (±10%) of nominal.
Operating temperature: —20°C to +80°C (max base t
Storage temperature: —62°C to +85°C.
Polarity: May be used positive or negative.
Output voltage and current: See specific model listings.
Series operation:
Series starting circuitry employed requires that inpu voltage be applied at a rate greater than 150 v rms/sec Consult factory if low rising input is anticipated.
Short circuit protection: Unique foldback circuitry (see c protects each module if output should be shorted tinuously. Automatic return after short removal.
Overvoltage protection: See model listings.

CONSULT FACTORY

TECHNIPOWER, INC. Ridgefield, Conn. 06877
A BENRUS SUBSIDIARY

PL-80

POWER MODULES

REGULATED AC-DC 3.0 to 152 VDC Up to 75 watts
BASE TEMP. RATING 80°C

HIGHEST DENSITY for SERIES REGULATORS

DESIGN PARAMETERS (Typical)

Temperature coefficient: 0.015%/°C or 1 mv/°C, whichever is greater.

Recovery time: Less than 50 μsec, 1/2L to FL.

Designed to meet MIL environmental specifications:
RFI — MIL-I-6181D
Shock — MIL-STD-202C, Method 205C;
Vibration — MIL-STD-202C, Method 201A
Hi-temp — MIL-E-5400, Classes 1 & 1A;
Humidity — MIL-STD-202C, Method 103B.

M.T.B.F. For Product Line: 60,000 hours, per MIL-HBK-217A, with module stressed at 80°C base temperature.

Output impedance: See curve.

OPTIONAL FEATURES

	SUFFIX
Fixed output voltage	F
External output adjust	H

SPECIFICATIONS

Input voltage range: 105-125 volts.

Input frequency range: 50-400 Hz.

Regulation-Line and Load Combined: ±0.05% — "A" models. ±0.5% — standard models.

Ripple: "A" models — 0.002% or 1 mv rms, whichever is
er, with 60 Hz input; 0.004% or 3 mv rms whiche
greater, with 400 Hz input.
Standard models — 0.01% or 5 mv rms, whichever is gr
with 60 Hz input; 0.04% or 10 mv, rms, whichever is gr
with 400 Hz input.

Output adjustment range: 10% (screwdriver adj. in bas
80% of rated load the output may be adjusted 20% (±
of nominal.

Operating temperature: —20°C to +80°C (max. base t

Storage temperature: —62°C to +85°C.

Polarity: May be used positive or negative.

Output voltage and current: See specific model listings.

Series operation: Series starting circuitry employed re
that input AC voltage be applied at a rate greater than
rms/second. Consult factory if slow rising inp
anticipated.

Short circuit protection: Unique foldback circuitry (see
protects each module if output should be shorted c
uously. Automatic return after short removal.

Overvoltage protection: See model listings.

TYPICAL OUTPUT IMPEDANCE—PL-80 ("A" Models)

FOLDBACK CIRCUIT CHARACTERISTIC

Models available to 152VDC. See catalog 701.

TECHNIPOWER, INC. Ridgefield, Conn. 06877

A BENRUS SUBSIDIARY

MC-65, MCS-65

MORE WATTS PER DOLLAR

POWER MODULES

REGULATED AC-DC: 3.0 to 152 VDC. Up to 750 watts
BASE TEMP. RATING: 65°C

DESIGN PARAMETERS (Typical)

Temperature coefficient: 0.015%/°C or 1 mv/°C, whichever is greater.

Recovery time: Less than 50 μsec, 1/2L to FL.

Designed to meet MIL environmental specifications:
- **RFI** — MIL-I-6181D;
- **Shock** — MIL-STD-202C, Method 205C;
- **Vibration** — MIL-STD-202C, Method 201A;
- **Humidity** — MIL-STD-202C, Method 103B.

M.T.B.F. For Product Line: 50,000 hours, per MIL-HBK-217A, stressed at 65°C base temperature.

Output impedance: See curve.

OPTIONAL FEATURES

	SUFFIX
Closer regulation	AA
Operation with lamp loads	E
Fixed output voltage	F
Shock and vibration mounts	G, V
External output adjustment	H
Fully epoxy encapsulated	K
Sealed internal potentiometer	P
Remote sensing	R, Y,
Lower temperature coefficient	T, TT
Off ground operation	U
Wide input range	W
Special cases, shapes and finishes	

SPECIFICATIONS

Input voltage range: 105-125 volts.

Input frequency range: 50-400 Hz.

Regulation: ±0.05% — MC models.
Line & Load Combined: ±0.5% — MCS models.

Ripple: MC models — 0.004% or 2 mv, rms, whiche greater, with 60 Hz input; to 0.008% or 4 mv, rms, whic is greater, with 400 Hz input.
MCS models — 0.01% or 5 mv, rms, whichever is gr with 60 Hz input; 0.04% or 10 mv, rms, whichever is gr with 400 Hz input.

Output adjustment range: 10% (screwdriver adj. in bas 80% of rated load the output may be adjusted 20% (± of nominal.

Operating temperature: —20°C to +65°C (max. base t

Storage temperature: —62°C to +85°C

Polarity: May be used positive or negative.

Output voltage and current: See specific model listin

Series operation: Series starting circuitry employed rec that input AC voltage be applied at a rate greater than 50 v rms/sec. Consult factory if slow rising input is anticip

Short circuit protection: Unique foldback circuitry (see protects each module if output should be shorted c uously. Automatic return after short removal.

Overvoltage protection: See model listings.

TYPICAL OUTPUT IMPEDANCE — MC-65

HF-80, HFC-80

POWER MODULES

REGULATED AC-DC 2.8 to 1000 VDC, 10 —375 watts
BASE TEMP. RATING: 80°C

10 TO 375 WATT WIDE RANGE MINIATURE MODULES

DESIGN PARAMETERS (Typical)

Ripple (p-p): 0.5% + 50 mv.

Recovery time: Less than 5 ms 1/2L to FL.

Efficiency: To 80%.

M.T.B.F.: 35,000 hours per MIL-HBK-217A, with module stressed at 80°C base temperature.

Temperature coefficient: 0.02%/°C.

E.M.I.: Suppression filters designed to meet MIL-I-6181D (Consult factory if full qualification is required).

OPTIONAL FEATURES

	SUFFIX
Fixed output voltage	F
Shock and vibration mounts	G, V
External output adjust	H
Fully epoxy encapsulated	K
Sealed internal potentiometer	P
Remote sensing	R
Wide input voltage range	W
Off-ground operation	U
External output adjustment with remote sensing	Y
Special shapes and finishes	

SPECIFICATIONS

Input voltage range: 105-125 VAC.

Input frequency range: 50-400 Hz.

Regulation accuracy: Line: ±(0.05% + 5 mv); Load: ±(0.1% + 5 mv).

Ripple (rms): 0.2% + 10 mv.*

Operating temperature range: —20°C to +80°C (max. base temp.)

Storage temperature range: —55°C to +85°C.

Polarity: May be used positive or negative.

Output voltage & current: See specific model listings.

Series operation: May be operated with conventional or complex loads provided total voltage in series connection does not exceed 350 v. Consult factory for operation of units above 350 v.

Short circuit protection: Automatic current limiting protects against momentary overloads and continuous shorts. Restores to normal operation after short is removed.

Overvoltage protection: HFC-80 model incorporates internal circuitry to protect load against possible overvoltage condition in event of power supply failure. Trip point is factory 25 ± 5% above maximum rated output voltage; trip point may be adjusted downward (5 volts minimum) by inserting selected resistors between negative output terminal and terminal marked "O.V." Output voltage will never exceed trip point more than 5% of maximum output voltage + 0.5 volt. To re-energize after overvoltage condition, turn input power off, then on again after a short delay. Individual external overvoltage protectors (to 0.5 volts output) also available.

*Increase to 0.6% + 20 mv at —20°C.

*Ampere Unit Supplied Only With Remote Sense Suffix (R) At No Extra Charge If Y Suffix is ordered, R Suffix Is Not Necessary

TECHNIPOWER, INC.
A BENRUS SUBSIDIARY
Ridgefield, Conn.
06877

CD-95, CDC-95
POWER MODULES

WIDE RANGE DC-DC CONVERTERS
BASE TEMP. RATING 95°C

HIGH EFFICIENCY CONVERTERS FOR DIRECT DC POWER LINE OR LOCAL SYSTEM REGULATION

DESIGN PARAMETERS (Typical)

Ripple (p-p): 0.5% + 50 mv.

Temperature coefficient: 0.02%/°C.

Recovery time: Less than 5 ms, ½L to FL.

Fully encapsulated. Designed to meet environmental requirements of MIL-E-16400 (all classes) and MIL-E-5400 (classes 1, 1A, and 2).

E.M.I.: Suppression filters designed to meet portions of MIL-I-6181D (Consult factory if full qualification is required).

Efficiency: To 80%.

Output fully isolated from input and case

M.T.B.F. For Product Line: 30,000 hours per MIL-HBK-217A

OPTIONAL FEATURES

	SUFFIX
Fixed output voltage	F
External output adjust	H
Remote sensing	R
Off-ground operation	U
External output adjustment with remote sensing	Y
Special shapes and finishes	

SPECIFICATIONS

Input voltage range: 21-30 VDC*

Input ripple (rms): 5% maximum.

Regulation accuracy-Line: ±(0.1% +5 mv);
Load: ±(0.1% +5 mv).

Output ripple (rms): 0.2% + 10 mv.**

Operating temperature range: —55°C to +95°C (max. temp.).

Storage temperature range: —62°C to +105°C

Polarity: May be used positive or negative.

Short circuit protection: Automatic current limiting protects against momentary overloads and continuous shorts. Restores to normal operation after short is removed.

Series operation: May be operated with conventional or complex loads provided total voltage in series connection does not exceed 350 v. Consult factory for operation of above 350 v.

Output voltage & current: See specific model listings.

Overvoltage protection: CDC-95 model incorporates internal circuitry to protect load against possible overvoltage condition in event of power supply failure. Trip point set at factory 25±5% above maximum rated output voltage; trip point may be adjusted downward (5 volts minimum) by inserting selected resistors between negative output terminal and terminal marked "O.V." Output voltage will never exceed trip point more than 5% of maximum output voltage + 0.5 volt. To re-energize after overvoltage condition, turn input power off and then on after a short delay. Individual external overvoltage protectors are also available.

Reverse polarity protection: Protected against reversal of input voltage polarity.

*Protection against MIL-STD-704A type surges available at extra cost (consult factory) —

Input voltage may be reduced below 21 VDC (to 15.0 VDC minimum) provided that for every volt below 21 VDC, the allowable output current is reduced by 10% and regulation (line and load respectively) is deteriorated by 0.2%.

Input voltages up to 150 VDC are available on special request.

**Increases to 1.0% + 50 mv at —55°C.

PM-95

POWER MODULES

REGULATED AC-DC 3.0 to 325 VDC. Up to 750 watts
BASE TEMP. RATING 95°C

QUALIFIED FOR EXTREME MIL ENVIRONMENTS

DESIGN PARAMETERS (Typical)

Temperature coefficient: 0.015%/°C or 1 mv/°C, whichever is greater.

Recovery time: Less than 50 μsec, 1/2L to FL.
Qualified for MIL environmental operation.

M.T.B.F. for Product Line: 40,000 hours per MIL-HBK-217A, with module stressed at 95°C base temperature.

Output impedance: See curve

OPTIONAL FEATURES

	SUFFIX
Closer regulation	AA
Reduced size and weight, 400 Hz input	D
Operation with lamp loads	E
Fixed output voltage	F
Shock and vibration mounts	G
External output adjust	H
Remote sensing	R, Y
Lower temperature coefficient	T, TT
Off ground operation	U
Wide input range	W
Multiple outputs	
Special cases, shapes and finishes	

SPECIFICATIONS

Input voltage range: 105-125 volts.
Input frequency range: 50-400 Hz.
Regulation-Line and Load Combined: ±0.05% — "A" models. ±0.5% — standard models.
Ripple: "A" models—0.002% or 1 mv rms, whichever is greater, with 60 Hz input; 0.004% or 3 mv rms, whichever is greater, with 400 Hz input.
Standard models — 0.01% or 5 mv rms, whichever is greater, with 60 Hz input; 0.04% or 10 mv rms, whichever is greater, with 400 Hz input.
Output adjustment range: 10% (screwdriver adj. in back). 80% of rated load the output may be adjusted a full 20% (±10%) of nominal.
Operating temperature: —55°C to +95°C. (max. base temp.)
Storage temperature: —62°C to +105°C.
Polarity: May be used positive or negative.
Output voltage and current: See specific model listings.
Series operation: Either conventionally or with complex loads. Series starting circuitry employed requires that input voltage be applied at a rate greater than 150 v rms/sec. Consult factory if slow rising input is anticipated.
Short circuit protection: Unique foldback circuitry (see curve) protects each module if output should be shorted continuously. Automatic return after short removal.
Overvoltage protection: See model listings.

TYPICAL OUTPUT IMPEDANCE PM-95 ("A" MODELS)

Models available to 325VDC. See catalog 701.

TECHNIPOWER, INC.
A BENRUS SUBSIDIARY

Ridgefield, Conn.
06877

F-115, FD-115
POWER MODULES
REGULATED AC-DC 3 to 325 VDC. Up to 500 watts.
BASE TEMP. RATING 115°C

QUALIFIED FOR EXTREME MIL ENVIRONMENTS

DESIGN PARAMETERS (Typical)

Temperature coefficient: 0.015%/°C or 1 mv/°C, whichever is greater.

Recovery time: Less than 50 μsec, 1/2L to FL.

Qualified for MIL environmental operation

Remote sensing: Connections provided for remote sensing of the output voltage so as to compensate for an IR drop of up to 0.5 volts total in the leads connecting the module to the load.

M.T.B.F. for product line: 25,000 hours, per MIL-HBK-217 A, with module stressed at 115°C base temperature.

Output impedance: See curve.

OPTIONAL FEATURES

	SUFFIX
Closer regulation	AA
Operation with lamp loads	E
Fixed output	F
Shock and vibration mounts	G
External output adjust	H
Lower temperature coefficient	T, TT
Off ground operation	U
Wide input range	W
Special finishes	

SPECIFICATIONS

Input voltage range: 105-125 volts.

Input frequency range: **50-400Hz** (F-115 Series)
400Hz (FD-115 Series).

Regulation-Line and Load Combined: ±0.05%.

Ripple: **F-115 Series:** 0.002% or 1 mv rms (whichever is
er)—0.004% or 3 mv rms with 400 Hz input.
FD-115 Series: 0.004% or 3 mv rms (whichever is
greater).

Output adjustment range: 10%. At 80% of rated lo
output may be adjusted 20% (±10%) of nominal.

Operating temperature: —62°C to +115°C (max. base

Storage temperature: —62°C to +125°C.

Polarity: May be used positive or negative.

Output voltage and current: See specific model listings.

Series operation: Series starting circuitry employed re
that input AC voltage be applied at a rate greater than
rms/sec. Consult factory if slow rising input is antici

Short circuit protection: Unique foldback circuitry (see
protects each module if output should be shorted
uously. Automatic return after short removal.

Overvoltage protection: Consult factory.

A BENRUS SUBSIDIARY

RA-80

POWER MODULES

ZERO ADJUST REGULATED AC-DC
BASE TEMP. RATING 80°C

IMPROVED CIRCUITRY REDUCED RIPPLE

DESIGN PARAMETERS (Typical)

Temperature coefficient: 0.015%/°C or 1 mv/°C, whichever is greater.
Recovery time: Less than 3 ms, 1/2L to FL.
Efficiency: Up to 80%.
Programmability: From zero (±200 mv) to maximum voltage.
Remote sensing of output voltage: Provided so as to compensate for an IR drop of up to 0.5 volts total in the leads connecting the module to the load.
External output adjustment: Terminals are provided for voltage control from an external potentiometer.

OPTIONAL FEATURES

	SUFFIX
Fixed output	F
Fully epoxy encapsulated	K
Off-ground operation	U

Special shapes and finishes

208 or 230 volt input available — consult factory

RA-80 SUPPLY MAY BE ORDERED IN BENCH OR RACK MOUNT — SEE LA-80 SERIES.

POWER CURVE

SPECIFICATIONS

Input voltage range: 105-125 volts.
Input frequency range: 50-400 Hz.
Regulation accuracy-Line: ±(0.10% + 5 mv).
Load: ±(0.15% + 5 mv).
Ripple (rms): 0.2% of maximum output voltage.*
Output adjustment range: From zero (±200 mv) to maxi[illegible] voltage setting.
Operating temperature: —20°C to +80°C. (max. base ter[illegible]).
Storage temperature: —62°C to +85°C.
Polarity: May be used positive or negative.
Output voltage and current: See specific model listing[illegible]
Series operation: Standard unit provides for series opera[illegible] either in conventional manner or with complex loads.
Short circuit protection: Terminals are provided for adjus[illegible] output current limit from zero to the output current ra[illegible] by an external potentiometer. See power curve below.
Overvoltage protection: See model listings.
* 1% of max. output voltage at —20°C.

temperature coefficient	T
e sensing	Y

pical Output Impedance
DP-80

Typical Foldback Characteristic

SPECIFICATIONS

Input voltage range: 105-125 volts.

Input frequency range: 50-400 Hz.

Regulation-Line & Load Combined: ±0.05%.

Ripple (rms): Less than 0.002% or 1 mv, whichever greater, for 60 Hz input (each output).
Less than 0.004% or 3 mv, whichever greater, for 400 Hz input (each output).

Output adjustment range: DP Models: Each output adjusted independently by screwdriver adjustment in base.
TDP Models: Both outputs adjusted simultaneously by single screwdriver adjustment in base.
Adjustment range 10%. At 80% of rated load the outputs may be adjusted a full 20% (±10%) of nominal.

Operating temperature: —20°C to +80°C (max. base temp.).

Polarity: One positive, one negative, common return.

Output voltage and current: See specific model listings.

Tracking accuracy (TDP models): Each output will be factory set within 1.0% of the other. Outputs will track within 20.0 mv or ±0.05% (whichever is greater) of each other during pot adjustment.

Short circuit protection (DP models): Each output independently protected by unique "fold-back" circuitry, which protects the module if output should be shorted continuously. Automatic return after short removal.

Short circuit protection (TDP models): As above, but if positive output is shorted both outputs will "fold back" simultaneously; if negative output only is shorted, positive output will not be affected.

Series operation: Either conventionally or with complex loads. The series starting circuitry employed requires that input AC voltage be applied at a rate greater than 150v rms/sec. Consult factory if slow rising input is anticipated.

POWER MODULES

UNREGULATED AC-DC 3.0 to 1000 VDC. Up to 975 watts
BASE TEMP. RATING 80°C

ALL SILICON, LOW COST AC-DC POWER SUPPLIES

DESIGN PARAMETERS (Typical)

Designed to meet MIL environmental specifications:
- **RFI** — MIL-I-6181D;
- **Shock** — MIL-STD-202C, Method 205C;
- **Vibration** — MIL-STD-202C, Method 201A;
- **Hi-temp** — MIL-E-5400, Classes 1 & 1A;
- **Humidity** — MIL-STD-202C, Method 103B.

M.T.B.F.: 200,000 hours per Mil-HBK-217A, with module stressed at 80°C base temperature.

Output isolated from ground.

Sealed construction.

Output impedance: See curve.

OPTIONAL FEATURES

	SUFFIX
Reduced size and weight	D
Shock and vibration mounts	G, V
Fully epoxy encapsulated	K
Off-ground operation	U
Special cases, shapes and finishes	

TYPICAL OUTPUT IMPEDANCE

TYPICAL LOAD REGULATION

SPECIFICATIONS

Input voltage range: 105-125 VAC.

Input frequency range: 50-400 Hz.

Regulation Line: proportional to input voltage.
Load: refer to load regulation curve.

Operating temperature: —20°C to + 80°C (max. base te

Storage temperature: —62°C to +85°C.

Ripple: Less than 5% rms.**

Polarity: May be used positive or negative.

Output voltage and current: See specific model listings.

Voltage setting accuracy: ±5% under full load cond with 115 v, 60 Hz input. Output voltage may vary 10% as input frequency is increased over a range 60 to 400 Hz.

*Modules can be designed to meet higher temperature requirements. Consult factory concerning price and delivery.

**The output ripple can be reduced to 2% rms. If this option is to corporated, the case size of the catalog unit must be increased by size, and the suffix "L" must be added to the model number of th power module (e.g. NP-28.0-3.0L, case size GB). Additional charge:

Models available to 1000VDC. See catalog 701.

tecnetics inc.

regulated DC-DC power supplies

All dimensions in inches

CASE MATERIAL: extruded aluminum
FINISH: black anodize
(per MIL-A-8625)

1 watt DC-DC regulated power supplies 9583 series

COMMON SPECIFICATIONS

(3) Input Voltage: 28VDC ±3VDC, continuous. 50VDC, 1 second max.
Input Current: 27ma typical @ 30 mw load. 87ma typical @ full load.
Output Voltage Adjust: ±10% @ full load. —40% @ 330mw load.
Temperature: Operating, —55 to +100°C case. Storage, —55 to +150°C. Case rise, 5°C full load.
(2) Isolation: Models 101-114,121, 1000VDC. Models 115-118, 3000VDC.
Output Power Derating: None to 100°C case.
Weight: 2.4 oz. fully encapsulated.
Minimum Load: 30 mW.

CASE MATERIAL: extruded aluminum
FINISH: black anodize
(per MIL-A-8625)

3 watt DC-DC regulated power supplies 9567 series

COMMON SPECIFICATIONS

(3) Input Voltage: 28VDC ±3VDC, continuous. 50VDC, 1 second max.
Input Current: 38ma typical @ 100mw load. 210ma typical @ full load.
Output Voltage Adjust: ±10% @ full load. —40% @ 1W load.
Temperature: Operating, —55 to +100°C case. Storage, —55 to +150°C. Case rise, 25°C full load.
(2) Isolation: Models 101-114, 121-124, 1000VDC, Models 115-120, 5000VDC.
Output Power Derating: None to +55°C case.
Weight: 4.0 oz. fully encapsulated.
Minimum Load: 100 mW.

+12 to +32 VDC hybrid voltage regulator VR series

COMMON SPECIFICATIONS

Input: Voltage max., 40VDC. Voltage min., Vout +4VDC typ. Current min., 8ma no load, typ.
Output Voltage: All units externally adjustable from +12 to +32VDC.
Current: 300ma absolute max.
(5) Current: 5A with ext. pass elem.
Impedance: DC to 100Hz 0.1 typ. 100Hz to 100KHz 1.5 typ.
Power Dissipation: 2 watts max. @ 25°C derating to 0.4W @ 125°C. (Typ. P.C. Mtg.)
Temperature Operating: —55 to +125°C.
Protection: Short Circuit proof, current foldback, knee ext. adj.
Ripple Attenuation: 4000: 1 typ.

(3) For operation with foldback, tie pin 11 to pin 13 and tie pin 4 to 5 and R_S from 4 and 5 to pin 6.
(4) For adjustable output, tie 10K pot between pin 6 and 11 and remove pin 11 to pin 13 jumper.
(5) For extended current range, connect NPN transistor with B > 25 as follows: collector to pin 1, base to pin 4, emitter to pin 5 and a 10 ufd capacitor from pin 6 to com, and jumper pins 11 and 13.
(6) Pin 9 is caseground.

other hybrid power conditioning products

custom

THICK FILM HYBRID CIRCUITS

- Compatible with monolithic I/C's-DIP package
- High power capability — 30 watts/in²
- Wide range of resistance values — 10 ohms to megohms
- Wide range of capacitance values — to 0.1 mfd
- Wide selection of NPN/PNP and FET devices
- Parasitic capacitance and inductance negligible
- Low "set-up" and unit costs in moderate quantities

Rapid response is given to your microelectronic circuit requirements within the above definition. Your circuit prototypes are rapidly optimized by our experienced semiconductor and hybrid integrated circuit staff, with quality production units supplied from our modern hybrid circuit production facility in Boulder, Colorado.

Watch for new **Hybrid Circuit Products** from TEC in major electronics publications.

Notes:
(1) 115/230 Vac Models available.
(2) Unregulated; contact factory for further information.
(3) Available from stock.

CASE MATERIAL: aluminum

FINISH: black anodize (per MIL-A-8625)

UNIT	"A"
30 WATT	3.50
60 WATT	4.00
120 WATT	4.50

TOLERANCES:
2 PLACE ±.030
3 PLACE ±.010

All dimensions in inches

30, 60, and 120 watt AC to DC power supplies PP series

COMMON SPECIFICATIONS

Input Voltage: 105-135Vac
Input Frequency: 50-400 Hz
Efficiency: 80% typical
Temperature Operating: −25° to +70°C

NOTES:
(1) Input slow blow fuse recommended.
(2) Contact factory for units designed for 400Hz only, and/or 230Vac input. Other inputs also available.

DESCRIPTION

The Prime Power Series AC/DC Power Supplies are especially useful as central unregulated pov sources for feeding "Point-of-Load" regulators. Three power levels, 30W, 60W, and 120W, and t choices of output voltages (±20VDC and +28VDC) make these rugged supplies well suited many applications. High reliability components and conservative ratings provide trouble-fi operation.

CASE DO-13

rmetically sealed, gold plated

otr models

he are 75 other models available with staoff voltages ranging from 6VDC to 200C.

otr applications

- ervoltage protection
- ntning protection
- tifier protection

ebility data

TEC has a flexible quality control program and organization which has been certified to eet all of the requirements of **MIL-Q-98A.**

TEC has been manufacturing highly reliable mi ture DC-DC converters and associated sol state products since 1959 for industri aerospace, and military applications and has established engineering, manufactu g, and quality control procedures. TEC's pr cts utilize high quality components and ma rials. MTBF data has been calculated pe **MIL-HDBK-217** (90,000 hours, typical).

Ma products have been designed to meet the environmental requirements of **MIL-E-54** as specified by **MIL-T-5422.**

TE products have been utilized in equipme designed to meet **MIL-I-6181D.**

Pr cts are designed for an input voltage co rming to **MIL-STD-704A** and include re se polarity protected to 50V and for in t transient of 50V for one second. Ad nal protection can be provided to meet th total requirements of **MIL-STD-704A.** Re rence catalog for TEC LT Series.

MIL-STD-704A transient suppressor limitran LT series

COMMON SPECIFICATIONS

Peak Voltage Protection: to 1200Vac; 600VDC/10 μsec max.
Response Time: 1 x 10^{-12} secs.
Peak Pulse Power Dissipation @ 25°C: 1500 Watts.
Continuous Power Dissipation: 1 Watt.
Failure Mode: Short Circuit.
Forward Surge: 200 amps for 8.3msecs @ 25°C.
Storage and Operating Temperature: —65°C to +175°C.
Equipment Protection: From 80V surges 70msecs. From 50V surges to 1 sec.
Weight: 1.5 grams (approx.).

TODD SYSTEMS POWER SUPPLIES

...sets the standards for the industry!

FEATURES

- .01% Regulation
- .5 mV rms ripple
- All silicon—no heat sink required
- 71 degree C operating temperature
- Short circuit / overload protection
- Electronic current foldback with automatic recovery
- Over Voltage protection option
- Designed to meet MIL environmental specificatior
- No turn-on or turn-off spike or overshoot

SPECIFICATIONS — SINGLE OUTPUT

PUT 05-132 Volts ac 47-420 Hz.

TPU Floating, isolated from ground, 300 Vdc max.

GUL TION: LINE: .01% or 1 mV whichever is greater, for rated input line ltage changes.

LOA .01% or 1mV whichever is greater, for no-load to full load chan at any output within specification.

PPL Less than .5mV rms, 5 mV Peak to Peak (to 10 MHz) (50-60 Hz).

ABI Y: .02% or 10 mV, whichever is greater, for 8 hrs., after 30 min armup. Measured at constant input line, load and amb. temp.

MPE ATURE COEFFICIENT: (.02% + 100 uV)/Deg. C.

MPE ATURE RANGE: OPERATING: −20 to +71 Deg. C. (see power ratin chart). NON-OPERATING: −55 to +85 Deg. C.

COV RY TIME: 50 microseconds to within 50 mV of regulation spec for n load to full-load change.

MO PROGRAMMING: RESISTANCE: 1000 ohms/volt. VOLT: 1 v/v

EMO SENSING: The amplifier is capable of compensating for a 1 volt ad lead loss and still maintain regulation at the load. An addi-tion 1 volt is available at the output if local sensing is used.

VER AD PROTECTION: Fixed, automatic electronic current foldback limi output current for overload and short circuit conditions. Auto-mat recovery upon removal of fault condition.

MER L PROTECTION: Self-resetting thermostat turns supply off for exc ive ambient.

VER VLTAGE PROTECTION (OPTIONAL): Adjustable overvoltage pro-tect , mounts externally.

ODE F OPERATION: Constant voltage / automatic current foldback.

ONT LS: Recessed screwdriver adjust over output range.

ONN TIONS: Barrier strip.

POWER SUPPLIES

64 TUTTLE RD. • MIDDLETOWN, CONN. • PHONE (203) 347-8536

AC-DC MODULAR SUPPLIES:

Single, Dual, and Multi-Outputs

FEATURES:

Industrial, Computer, Ground Support Models
Fully Repairable — removable case
Instant Short Circuit Protection
Rugged Design — all units meet highest MIL-Shock and vibration tests

SPECIFICATION RANGES:

Output Voltage.....4.5 VDC - 1,000 VDC
Output Current .....0 - 30 Amps
Regulation .....5% - .05% - .02%
Base Temperature .....75°C to 115°C

FULL MILITARY SPECIFICATION LINE DESIGNED TO COMPLY WITH:

MIL-T-27A	Transformers
MIL-Std-701, MIL-S-19500	Semiconductors
MIL-C-3965	Capacitors
MIL-E-4158, MIL-E-5400, MIL-E-16400, MIL-E-5272, MIL-T-21200	Workmanship and Environmental

CERTIFIED TEST DATA ON MILITARY COMPLIANCE

CUSTOM SPECIALS

- Integrated Circuit Types
- Open Frame
- Micro-Miniature Versions
- Commercial Types

DC to DC CONVERTERS — MODULAR

SPECIFICATION RANGES:

Input Voltage .....24 VDC - 30 VDC
Output Voltage .....5.0 VDC - 5,000 VDC
Base Temperature .....75°C to 115°C

FEATURES:

Rugged Design
Spike Protection

FULL MILITARY VERSION AVAILABLE

SRIES • DC to AC SINE WAVE INVERTERS

W series inverters supply quality AC power from DC Output regulation and frequency stability are closely d, normally exceeding the specifications of public wer. A wide tolerance from nominal input voltage is to accommodate the characteristics of storage bat- lso, because most AC equipment exhibits a higher load than running load, the GW series is designed omatic current limiting. This feature prevents turn e inverter even under continuous overload. Other tions as outlined below exemplify the quality and ght that have gone into the GW design.

RAL SPECIFICATIONS

NCY STABILITY:	±1% as listed. Std. Options (see below) offer 0.05% and 0.001%.
ATURE:	Operating −20°C. to +50°C. • Storage −40°C. to +80°C.
TION (Circuits included):	Input reverse polarity • Low or high input voltage • Overload and short circuit.
HARMONIC DISTORTION:	<5% at full load
VOLTAGE:	115 VAC normally supplied • 230 VAC available where listed.
E REGULATION:	Line: ±2% • Load: ±3%
FILTERING:	Filter S-1 — Reduces noise level at battery input to less than 30 dbrn. Filter S-2 — Protects unit from spikes on input of 1000 V. for up to 5 microseconds. Filter S-3 — Protects unit from spikes on input of 3000 V. for up to 1 millisecond.

Portable and rack-mounted units are available. Dimensions given in tables are for rack-mount versions. Add letter "D" in model number (GWD) to obtain portable mount.

Mod "A" Frequency Stability: ±0.001%
Mod "C" Frequency Stability: ±0.05%
Mod "E" External Synchronization: By pulse or sine wave
Mod "M" 2 meters (input or output voltage or amps.)
Mod "R" Automatic Restart

ERIES • SCR HIGH POWER SINGLE AND THREE PHASE, VAVE INVERTERS AND FREQUENCY CHANGERS

TOPAZ "X" series equipment represents an important advance in the the-art of off-the-shelf FREQUENCY CHANGERS and INVERTERS. The es circuit uses SCR's to quasi-square wave commutate input DC into a l harmonic suppressing (sine wave output) transformer.

regulation is accomplished by pulse width modulation of each half of the uare wave. Because this is a time domain control, a high gain feedback n be used to achieve very tight regulation at extremely high electrical ies. SCR switching noise is suppressed and filtered and the resulting NCY CHANGERS and INVERTERS are rugged, compact and very reliable.

7.5 KVA FREQUENCY CHANGER

HIGH EFFICIENCY DC-to-DC CONVERT

TOPAZ DC-to-DC Converters . . . constructed completely modular basis . . . are available up t KW output and standard voltage regulation is ± using switching regulators. Input modules, o modules and control circuits all plug into a dard 19″ chassis assembly, which incorporates filtering, controls, circuit breakers, etc. The provide custom power for a system without the one-time engineering charges usually incurre creating a custom system.

DC INPUT VOLTAGES AVAILABLE:
12, 24, 32, 48, 125, 250 (others on special

DC OUTPUTS AVAILABLE:
3 VDC to 1,000 VDC (others on special order).

STANDARD FEATURES

DC input filter will suppress up to 1,000-volt spikes on the DC input line. (Other filters available)

Input is protected against accidental reverse-polarity hook-up.

Outputs are protected against overload, even to short circuits.

MIL Specifications type circuits and construction insure reliable environmental performance.

Note: If desired, an AC output for operation of cooling fans can be made available.

POWER SUPPLIES FOR MIL-STD-704 SIMULAT

Provides 400 Hz variable ±10%, 115 VAC variable ±10% for design, checkout, and manufacture of military electronic syst

Supplies a full kilowatt of 400 Hz sine wave power in a portable which draws less than 15 amps of 60 Hz input.

GENERAL SPECIFICATIONS

OUTPUT VOLTAGE: (Selectable)	Fixed, 115 VAC ±1% nominal Variable, 100-130 VAC
OUTPUT FREQUENCY: (Selectable)	Fixed, 400 Hz ±½% or Variable, 360-440 Hz
INPUT:	120 VAC ±10% single phase 50-450 Hz
SINE WAVE OUTPUT:	Total Harmonic distortion less than 3% at full load.
OPERATING TEMPERATURE:	−20° to +50°C.
CIRCUIT PROTECTION:	Overload, short circuit, current limiting
WEIGHT:	60 pounds per kilowatt
OTHER FEATURES:	Talk to your Topaz applications engineer

NERRUPTIBLE POWER SYSTEMS (UPS)

PAZUPS invert auxiliary or standby (battery) power to high quality AC power supplying critical processes and equipment during a failure of the public utility supply.

e uninterruptible power system (UPS) typically consists of: (1) Battery; (2) Bat- charger; (3) Inverter; (4) Control circuitry. There are three common types of s or Control Circuits).

YPE A — Continuous on-line (Fig. A)

e critical equipment always operates from the inverter tput. In the event of a failure of utility power, the "floated" tter immediately picks up the load and there is no sen of power.

YPE B — Off-line (Fig. B)

e utility power line supplies the critical equipment until fail at which time the UPS is manually or automatically ut nevertheless leisurely) turned on and switched into the sten In this type of system the inverter may be maintained the line, drawing quiescent power during standby, to mini- ze power transfer time.

YPE C — No-break (Fig. C)

s is an off-line standby system which incorporates a fast ting automatic sensor and transfer switches to supply ase correlated power to the critical equipment with a xim m of ¼ cycle drop-out time in the event of utility wer line failure. The system may be externally controlled hen desired.

cau the usual UPS has many parameters which must be ore to each individual application, it is extremely diffi- t to "catalog" a UPS capability. TOPAZ Inc., however, has olve a program which will calculate optimum system con- ants based on already designed off-the-shelf system oul. If you desire a proposal on your UPS simply pro- e t following information:

1. Description of critical system, including power require- nts.
2. Discussion of system "times": Time on batteries, time to recharge batteries, time to switch, MTBF, allowable transfer time, etc.
3. Any special requirements, noise suppression required, signals and alarms, interfaces, MIL specs, type of bat- tery material preferred, etc.

ing his data, TOPAZ will optimize a system for your spe- al requirements. Normally, a proposal for this equipment n be provided in less than one week.

FIGURE B, OFF-LINE UPS

FIGURE C, NO-BREAK UPS

C POWER SUPPLIES

OPA ability to create AC waveforms from DC power urce is employed in the manufacture of extremely small nd lightweight AC-to-DC power supplies. The size and weight a power supply can be significantly reduced if the power ansformer operates at frequencies above 60 Hz. Typically, OPA builds power supplies which operate at 18-20 KHz owe interstage frequency. Extremely small and lightweight C power supplies for critical applications are the result. OPA also manufactures a line of conventional 60 Hz high owe supplies for use as system building blocks. These DC owe supplies may also be used to convert any 24 volt input wer to a frequency changer and are shown in the table.

SPECIFICATIONS:

SPECIFICATIONS

POWER TO LOAD 2 KVA

INPUT 100 to 130 volts, 60 Hz

OUTPUT 115 volts, 60 Hz, sinusoidal wave, with harmonic distortion dependent upon input. Generally less than 3% T.H.D.

COMMON MODE REJECTION 120 DB minimum (by method of MIL-T-27B). One million-to-one attenuation.

NORMAL MODE REJECTION (Measurements made under full-power operation into a resistive load.)

VOLTAGE REGULATION

To Line ±1% for ±15% line variations

To Load —1% for variations of 20% to 100% of full load, resistive.

Power factor	1.	0.9	0.8	0.7	0.6	0.5
% Regulation*	1	2	4	4	4	5

*Regulation negative for lagging power factor (inductive load)
Regulation positive for leading power factor (capacitive load)

Frequency Effect Above regulation data apply for any given frequency in a band of 60 Hz ±5%
A variation of 1% in line frequency causes output-voltage change of 1.5% in the same direction.

Temperature Effect Output voltage changes —.025% per degree centigrade increase.

ISOLATION
- More than 10,000 megohms insulation resistance between input and output terminals; also between terminals and chassis.
- Less than .005 picofarads effective capacitance** between input and output terminals.
- Ground loops avoided.
- Shock hazards minimized.

SHIELDING

- The Topaz ultra-isolation barrier shield is the guaranty of minimum input-to-output effective capacitance**.
- The suppressor shield minimizes normal mode noise created by the normal process of common-mode noise rejection.
- Special precautions are taken to insure minimum RF leakage.
- RF gaskets are used throughout.
- Bulkhead mounted RF filters are on each side of incoming power line.
- RFI back shell is on matching plug which mates with output receptacle. This facilitates connecting to shielded cable and shielding the load circuits.

***Effective capacitance (sometimes called leakage capacitance) is the capacitance measured between input and output when barrier shield is grounded.*

OVERLOAD & SHORT CIRCUIT PROTECTION
- When loaded beyond rated KVA output voltage drops rapidly reaching zero at short circuit. Output current at this point will be between 125% and 200% of normal rated value.

EFFICIENCY
- 80% at full load and standard output voltage levels.

RESPONSE TIME
- 25 milliseconds (1½ cycles) following step input voltage change within rated limits before output returns to specified regulation range.

MECHANICAL DIMENSIONS

Length	Width	Height
26.00"*	12.50"	8.50"

*Length is 31.00" including mating connectors

- Mounting dimensions (on center):

Length	Width
5.56"	11.31"

- Mounting is by means of 4 slotted pads accommodating ⅜" diameter bolts.

WEIGHT		TEMPERATURE	
Unit	130 lbs.	Operating	—20 to +40°C
Shipping	167 lbs.	Storage	—40 to +80°C

RECEPTACLES AND PLUGS FURNISHED
Input receptacle: Arrow-Hart 5878
Input power line matching connector: Hubbel 5474
Output receptacle: Amphenol 97-3102A-22-8-P
Output line matching connector: Glen-aire G-61877 w RFI back shell*

**Customer should connect his two conductor cable (not furnished) to the out matching connector above.*

ULTRA-ISOLATION TRANSFORMERS

60 Hertz Single-Phase Models
GENERAL SPECIFICATIONS

ISOLATION *Three categories of guaranteed interwinding capacitance are available as listed below. Leakage resistance from either winding to the other or to ground greater than 10,000 megohms.*

COMMON MODE REJECTION *Greater than 125 DB (for .005 pf) to more than 145 DB (for .0005 pf) as previously defined. Transverse noise rejection greater than 40 DB (see preceding text).*

CONSTRUCTION *Class B (130° C. operating) materials used throughout. Hi-Pot 1000 volts (RMS) winding to winding or ground.*

ULTRA-ISOLATION TRANSFORMERS

60 Hertz Three-Phase Models
GENERAL SPECIFICATIONS

ISOLATION *Three categories of guaranteed interwinding capacitance are available as listed below. Leakage resistance from either winding to the other or to ground greater than 10,000 megohms.*

COMMON MODE REJECTION *Greater than 125 DB (for .005 pf) to more than 145 DB (for .0005 pf) as previously defined. Transverse noise rejection greater than 40 DB (see preceding text).*

CONSTRUCTION *Class B (130° C. operating) materials used throughout. Hi-Pot 1000 volts (RMS) winding to winding or ground.*

Note: A. A 277/480 volt Y connection is available for either primary or secondary on 3 phase units of 15 KVA or larger.
B. A 208 volt Δ connection is available for either primary or secondary on 3 phase units of 15 KVA or larger.
C. Other voltages or taps are available on special order. For information call or write the factory.
D. All input and output connections are made with screw terminals.
*Denotes 240/416 Y is available but not generally used.
**Denotes 480/832 Y is available but not generally used.

ULTRA-ISOLATION TRANSFORMER — MECHANICAL OUTLINES
SINGLE-PHASE MODELS (3 STYLES)

STYLE "R" — *Receptacle*
(125 & 500 VA — SINGLE 1 & 2.5 KVA — DUPLEX) Not available for 5KVA or higher power

STYLE "F" — *Flat (space saver) available with terminals only.*

STYLE "T" — *Terminals*

THREE-PHASE MODELS
Primary's screw terminals are on one side; secondary's are on opposite side. All terminals are covered and electrostatically shielded.

superreg®

PRECISION POWER REGULATORS BUILD A POWER SUPPLY IN MINUTES USING ANY DC SOURCE

- Low Output Impedance: .01% Regulation
- Temperature Compensated: .01%/°C
- 125°C Operation
- Adjustable Output: ±10%
- Short Circuit Protection
- 104 Models Available

Type 75TE
Shunt Regulator
- 75 Watt or 3 Amp capability
- Output voltages from 3.9-56 Volts
- .01% Regulation — output Z from .002 ohms
- Hermetically sealed TO-36 case

Type 80TF
Shunt Regulator
- 80 Watt or 3 Am capability
- Output voltages 3.9-56 Volts
- .01% Regulatio output Z from .0
- Encapsulated construction

Type 3AP
Series Regulator
- Full 3 Amp Load Capability
- Output voltages from 10-33 Volts
- .01% Regulation — output Z from .002 ohms
- Adjustable overload protection

Type 1AP
Series Regulator
- Economy priced
- Output voltages 5-24 Volts
- 1% Regulation - output Z from
- Full 1 Amp Loa Capability

Super/reg miniature regulators, uniquely designed for maximum heat transfer and power handling capability, contain all the electronic circuits necessary for the most sophisticated system needs. Simply connect rough DC from any source — a semi-filtered, half-wave rectified transformer output or even a battery — and you have instant, precision DC power where you need it: at the load itself.

Available in shunt and series versions, these ultra-compact configurations provide maximum layout flexibility over a wide range of voltage levels. The point-of-load installation eliminates distribution-line losses and cross-talk. And the off-the-shelf stock levels enable you to build your own custom power supply — literally in minutes!

WE'RE ALSO NARROW-MINDED POWER SUPPLY DESIGNERS

We concentrate exclusively on a very narro vital portion of the power supply spectrum — output MIL-design supplies.

We focus on squeezing out those few perce points more than 75% efficiency, or pushin power density just a little bit better than 4 deli watts per cubic inch.

When the supply you need must be smaller, reliable, more efficient and provide that seem impossible combination of parameters, pleas on our narrow-minded designers.

triolab®

NEW IDEAS IN POWER SOURCES

Trio Laboratories, Inc. • 80 Dupont St., Plainview, L.I., N.Y. 11803 • Tel: 516-681-0400 • TWX: 510-221-1861

TRIO/LABS' 600 Series 100 Watt Switching Regulator Power Supplies setting new standards for high efficiency, low noise, computer/military applications.

We make it possible by harnessing the space-saving advantages of the switching regulator — but have pulled its RFI fangs (input and output meet MIL-1-6181). When you read our data sheet carefully, you'll also find it full of hidden features that other manufacturers would loudly acclaim. Such as an IC regulating amplifier, automatic overvoltage crowbar, self-resetting automatic overload and short circuit protection, and even 30 ms full-load storage after the input voltage disappears. Efficiency is so high that the very hottest spot on the heat sink has a rise of only 25°C. You can actually hold our unit after hours of full-load bench operation without smelling burning flesh! And is there any other unit you've heard about that will continue to deliver full-load at 71°C. — without derating, heat sinking or forced air cooling. Single, dual, or triple outputs at voltage levels of 3V to 30V can be provided to your specific needs. By the way, if you think our $400 price is high, try adding the "optional extras" to anybody else's standard you had in mind.

triolab®

you can squeeze your 5V/20A power supply down to fit your microcircuitry.

Notes:

1. Includes three outputs; 0 to +8 VDC at 3A; 0 to +32 VDC at 1A; 0 to -32 VDC at 1A.
2. OVS Modules available for LVS, LVW, TL8-3 and TP units. OVS Modules mount externally.
3. Price varies with quantity. Contact factory for full pricing structure.
4. This unit is normally stocked in metered version. NM (non-metered) units available on special order.
5. Includes three outputs: +3.2 to +5.5 VDC (OV) at 6A; +10 to +26 VDC at 1.8A; -5 to -16 VDC at 1.5A.
6. Dual output modules.

See overleaf for higher voltage units.

TUNG-SOL POWER SUPPLIES

Standard units that meet a lot of special requirements

Miniaturized power supply available in four models that provide 28VDC at 25, 50, 100 or 200 amps. All operate from 120/208 v, 47-65 Hz, 3-phase, 4-wire AC inputs.

Ground power supply providing 28 VDC at 100, 200, 300, or 400 amps from input power of 400 cps, 200V. RFI per MIL-E-55301 and Environmental per MIL-E-5272.

Transmitter-receiver power supply. Eleven different outputs, remotely controllable. Meets MIL-E-16400.

Convection cooled, high voltage regulated airborne power supply. Output: 200A at 28 VDC. Regulation: 8% at 200V.

Highly regulated, multiple output: —24 VDC @ 10 A; —10 VDC @ 10 A and +10 VDC @ 6A. Meets MIL-E-16400.

Three phase line regulator and power supply. Multiple AC-DC regulated outputs at 13.5 and 25A. Meets MIL-T-21200C.

15 KVA Converter

3 KVA Uninterruptable Power System

FEATURES

- mple design, patented SCR output transformer-filter circuit
- gh reliability, all solid state, silicon semiconductors
- andard units available from 0.5 KVA to 30 KVA with single or ree phase outputs
- esigned for military applications
- egulation to ±1% for line and load changes
- armonic distortion to 2%
- tandard frequency stability of 0.25%
- TBF exceeds 10,000 hours per MIL-HANDBOOK 217A
- utomatic overload and short circuit protection
- vailable with automatic output transfer and self contained attery charger for uninterruptable power systems
- Jnits available for frequency synchronized or parallel operation

DC SWITCHING REGULATORS

CUSTOM MULTIPLE OUTPUT DC POWER SUPPLIES

FEATURES

- High efficiency switching regulators
- Small size / high power ratio
- IC control circuits
- Plug in circuit boards
- Fast delivery
- Ripple to 10 MV, peak-to-peak
- Designed to customer specifications
- Input 120 VAC or 240 VAC 47 to 440 Hz
- Regulation to ±1% typical
- Temperature coefficient .01%/°C
- Low Cost

Typical Unit: 5 Regulated Outputs, 175 Watts Output Power

STANDARD MODULES FOR PRODUCTION AND PROTOTYPE

ELECTRICAL SPECIFICATIONS

Input:	120 VAC or 240 VAC ±10%, 47 Hz to 440 Hz
Regulation:	±1% of output voltage for line and load
Output Impedance:	Less than 0.5 ohms to 1 MHz
Short Circuit:	Complete protection to zero output at full load current
Ripple:	50 MV peak-to-peak (maximum)
Overvoltage Protection:	Set to 20% above nominal output voltage (standard)
Temperature Coefficient:	.01%/°C of output, 0°C to 50°C

SPECIALISTS IN SOLID STATE POWER CONVERSION

VARIABLE SPEED DRIVES FOR CONTROL OF AC MOTORS

▪ Soft start capability ▪ Full range speed control ▪ Self compensating for load variations ▪ Maintains full torque into load ▪ Open- or closed-loop operation ▪ Easily installed on existing motors ▪ No structural modifications required ▪ Metered for simple check-out

APPLICATIONS: Rotary, reciprocating and centrifugal pumps and compressors; large circular saws and fans; cranes and hoists; winding, polishing, grinding, milling and textile machinery; motor generator sets; and all applications where speed control, torque control, or soft starts are required.

Simple, low-cost controller provides variable frequency supply with constant volt-seconds to AC motors; maintains full torque into load. Precision control makes AC motors practical for changing or high inertial loads. Soft start and overload limiting capabilities reduce inrush current to 1.5 full load motor current, eliminate need for external starters. May be located in any convenient location; no structural modifications required. Modular construction facilitates ease of check-out and low mean time to repair. Available in special housings for hazardous, corrosive, and other hostile environments. ***Standard units 10-100 HP; consult factory for higher HP ratings.***

GENERAL SPECIFICATIONS

HORSEPOWER: 10 through 100 HP with full range of intermediate values.

INPUT VOLTAGE: 3 ϕ, 220 or 440 VAC, $\pm$15%.

INPUT FREQUENCY: 50 or 60 Hz, $\pm$1.5%

OUTPUT VOLTAGE (AT FULL SPEED): 3 ϕ, 220 or 440 VAC (nominal)

OUTPUT FREQUENCY: 2 to 60 Hz (higher maximum frequencies available on special order).

OUTPUT FREQUENCY STABILITY: $\pm$1%

CONVERSION EFFICIENCY (AT FULL LOAD): 95%

OPERATING TEMPERATURE RANGE: –30°C to +55°C

FREQUENCY CONVERTERS

400 Hz to 60 Hz SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Airborne and Ground Support Equipment

MODEL PS-62-66D
3.5KVA in 90 pounds

FEATURES

■ High efficiency ■ RFI protection ■ Short circuit and overload protection ■ Long, maintenance-free operation ■ Self-contained cooling ■ Light weight ■ Low distortion

APPLICATIONS

These converters provide a dependable source of 60 Hz sine wave power for airborne and air-transportable test equipment. They are also used with 60 Hz ground equipment wherever primary power available is 400 Hz. Applications include use with oscilloscopes, metering equipment, recorders, cryptographic machines, and teletypes.

MODEL	POWER	INPUT		OUTPUT		SIZE (Dim. in Inches)
PS-65-225-7	400 VA	115/200 VAC	400 Hz	115 VAC ± 5 %	60 Hz ± 1.0%	7.8 x 5.2 x 21.3
PS-64-162	750 VA	115/200 VAC	400 Hz	115 VAC ± 5 %	60 Hz ± 1.0%	7.5 x 12 x 20.5

All units available with other input voltages, and frequencies of 360-1000 Hz.

All units available with output frequency to 0.01%.

FREQUENCY CONVERTERS

60 Hz to 400 Hz SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Shipboard and Ground Support Equipment

MODEL PS-65-243-1

FEATURES

■ High efficiency ■ Small size ■ Light weight ■ Low distortion ■ Virtually no audible noise ■ Long, maintenance-free operation ■ Short circuit and overload protection ■ RFI protection

APPLICATIONS

Extremely stable and quiet-operating, these converters are excellent for flight simulators, and wherever 400 Hz power is required to operate airborne-type equipment. Other applications include ground support systems, design and test labs, and shipboard installations.

STATIC INVERTERS

28 VDC to 400 Hz SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Airborne and Ground Support Equipment

MODEL 4SI-500-1P

FEATURES

■ Overload and short-circuit protected ■ High efficiency ■ Light weight ■ Voltage-regulated ■ Low distortion ■ Stable output frequency ■ Long, maintenance-free operation ■ Virtually no audible noise ■ RFI protection

APPLICATIONS

These inverters are ideal for providing AC power from DC sources to one or more items of airborne equipment, and also are excellent sources of power for 400 Hz ground support equipment. Typical applications include use with weather radar, Doppler navigation systems, artificial horizons, omni's, autopilots, ADF, DME, transceivers, transponders, and engine analyzers.

MODEL	POWER	INPUT	OUTPUT		SIZE (Dim. in Inches)

STATIC INVERTERS

28 VDC to 60 Hz SINE WAVE OUTPUT

Meets Applicable MIL Specifications for Airborne and Ground Support

MODEL PS-67-324-1

FEATURES

■ High efficiency ■ Light weight ■ Small size ■ Low distortion ■ Virtually no audible noise ■ Long, maintenance-free operation ■ Short circuit and overload protection ■ RFI protection

APPLICATIONS

For aircraft instrumentation systems with 28 VDC electrical systems, and for flying laboratories, these instruments provide an excellent source of 60 Hz power. Applications for these inverters include power for oscilloscopes, meters, cryptographic machines, teletypes, and recorders.

MODEL	POWER	INPUT	OUTPUT		SIZE (Dim. in Inches)

high VOLTAGE DC POWER SUPPLIES

A

D

C

B

ADJUSTABLE OUTPUT POWER SUPPLIES

Series "BA" adjustable power supplies and series "BP" power packs are available at voltage ratings from 1 KVDC through 2000 KVDC at output power ratings from 1 watt to 250 kilowatts continuous. The adjustable series includes applications oriented control features and package design as shown in photos A and B. The power pack series (photos C and D) has many applications in OEM systems and for general laboratory use.

Every UVC power supply includes conservatively rated high voltage components designed and manufactured under the strict control of the specialized UVC technical staff to insure continuous duty, long term, trouble free operation. A one year factory backed and field supported warranty policy accompanies each shipment.

LOOK AT THESE FEATURES

1. **Ripple** Each power supply offers a standard ripple specification of 5% maximum or better. Optional filters and attenuators are available for every UVC supply to reduce ripple to as low as .01% rms.
2. **Polarity** Each power supply offers the flexibility of reversible output polarity performance.
3. **Protection** Overvoltage and overcurrent protection features are available as both adjustable range and fixed value circuits. All access areas and doors are interlocked for personnel protection and all energy storage components and circuits are discharge protected for personnel protection.
4. **Package** Rack mounted, floor and bench operable as well as portable design are among the packages available for UVC standard high voltage power supplies.

PRECISELY REGULATED EQUIPMENT

Precisely regulated performance over wide adjustment range, low ripple, fast response and high stability enable the series "BRE" power supplies to be used in exacting work for x-ray spectroscopy, electron microscopes, TWTs, ion bombardment experiments, particle separators.

These precisely regulated power supplies are available in voltage ratings from 1 KV through 500 KVDC at continuous duty output power up to 40 KW. Our regulation circuitry techniques realize performance specifications which are virtually independent of input line variations or no load-full load changes. Ripple in most cases is 0.01% rms and the output polarity is available as both fixed and reversible. Two voltage adjustment schemes are offered, namely digital dialable control for the most exacting applications and continuous coarse and vernier controls. In the digital dialable scheme, we allow for adjustment in increments of 10 KV, 1 KV, 100 volts, 10 volts, 1 volt and 0-1 volt vernier. This system provides the assurance that the actual output is always within 1% of the dial readings. As indicated, you may select a coarse and vernier voltage adjustment scheme and realize economic savings without sacrificing basic regulated performance. Regulation accuracy of ±0.25%; ±0.1%; ±0.05% and ±0.01% for line or load changes are available on most series "BRE" power supplies.

A new line of solid state, precisely regulated power packs for photo multiplier and CRT applications have also been recently introduced. These supplies are available at voltage ratings up to 20 KVDC.

Write or phone for Catalog UVC-670 containing complete specifications for the extensive line of UVC high voltage power supplies.

IF YOU HAVEN'T FOUND IT,

VARO, INC., STATIC POWER CONVERSION EQUIPMENT IS CUSTOM DESIGNED TO MEET YOUR SPECIFIC REQUIREMENTS. BUT ENGINEERING IS NOT ALL WE CAN OFFER YOU—

We are specialists in complex, reliable, state-of-the-art power conversion for military/aerospace applications.

LET US CREATE IT FOR YOU.

WE HAVE THE CAPABILITY TO PRODUCE FROM 50 TO 50,000. DO YOU WANT IT SOPHISTICATED, OR IS SIMPLICITY YOUR GOAL?

We're also computer/peripheral power supply experts. Which means you don't have to be.

Whatever you need, we have the capability to design, develop, and manufacture magnetic components (including the Varoformer® CVT) converters, inverters, power supplies, and regulators for aircraft, missiles, ships, submarines, night vision, surface carriers, computers/peripherals, and office equipment. Our engineering staff has at its fingertips the finest data processing equipment available to aid in its decisions of what best meets your requirements. Our manufacturing facility contains the latest and most modern production equipment. Give us the opportunity to quote on your requirements—and—if you haven't found it, let us create it for you.

REGULATED, WIDE BAND AC to AC POWER SUPPLIES

"S" SERIES POWER SUPPLIES THE STANDARD "S" SERIES FEATURES:

- All silicon solid state components
- Single phase and multi-phase outputs
- Advanced, state-of-the-art designs
- Accepts over 50 different plug-in oscillators
- Rack mounted units and bench models
- 18 Models from 130 VA to 6000 VA.

All aluminum parts are finished in gold iridite or black anodize. Steel parts are cadmium plated and finished with gold iridite. Front panels are standard Vector light blue gray semi-gloss enamel. Other paint available on special order. Furnish color chip and federal specification number.

SINGLE PHASE OUTPUT

MODEL	POWER OUTPUT VA	DIMENSIONS (Inches) H	W	D	MODEL	POWER OUTPUT VA	DIMENSIONS (Inches) H	W	D
130-S	130	5¼	19	14	750-S	750	12¼	19	20

ELECTRICAL SPECIFICATIONS (APPLY TO SINGLE & 3 PHASE MODELS)

INPUT DATA

VOLTAGE: 105 to 125 V AC, single phase for all units 600 VA and below (nominal 115 volts). If 210 to 250 V input voltage desired, add suffix "2" to model number. All models from 750 VA to 6000 VA are normally supplied with 208/230 V AC 3 phase input. 440/460 AC 3 phase input also available, add suffix "3" to model number.

FREQUENCY: 47 to 65 Hz. 47 to 480 Hz available on special order.

INPUT CONNECTION: All units have barrier strips at the rear.

OUTPUT DATA

BASIC FREQUENCY RANGE: All single phase output models 45 Hz to 10 KHz.

DISTORTION: 2% or less including plug-in oscillator.

VOLTAGE: Variable from 0 to 130 volts.

POWER OUTPUT: Full rated VA from 110 to 130 volts.

POWER FACTOR: Full rated VA from unity to 0.7 lead or lag. Greater power factor with some derating.

LINE REGULATION: ±0.25% over input voltage range, at full rated VA.

LOAD REGULATION: ±0.25% from no load to full load.

RECOVERY: 100 microseconds.

OVERLOAD: Automatic overload protection with manual reset and overload indicator.

HUM AND NOISE: —60 DB below full output.

OUTPUT CONNECTIONS: Five way binding posts on front panel and barrier strips at rear.

OUTPUT CONFIGURATION: Single phase models have two wire floating output (one side may be grounded) insulated for 500 volts RMS.

ADDITIONAL SPECIFICATIONS FOR 3 PHASE UNITS

All electrical specifications shown above apply to 3 phase units plus the following:

PHASE UNBALANCE: 100% phase unbalance will not affect any electrical specification.

OUTPUT CONFIGURATION: Four wire, neutral floating. Units will accept Δ or Y loads. The neutral, or any one leg may be grounded.

OUTPUT VOLTAGE: 0-130 volts, line to neutral.
0-225 volts, line to line Y.
0-130 volts, line to line Δ.

METERING: Units of 900 VA and over are supplied with 3 output volt meters. Units below 900 VA are supplied with one meter and a switch to read line to neutral, line to Y, and line to Δ.

VECTOR engineering inc.

"T" SERIES AMPLIFIERS

The "T" series of regulated A.C. power sources is an extension of the "S" series in the higher power range with outputs up to 20,000 VA. The standard "T" series feature all silicon solid state components except for the output stage where rugged, forced air vacuum tubes are used. These units can also be used as high power audio amplifiers. The supplies are compact, ruggedly constructed, and contain all of the electrical and mechanical features of the "S" series except as follows: Distortion: 2% max., Line regulation: ±0.5%, Load regulation: ±0.5%.

SINGLE PHASE OUTPUT

MODEL	POWER OUTPUT VA	DIMENSIONS (Inches) H	W	D
2000-T	2000	14	19	20
3000-T	3000	45	25	25
5000-T	5000	45	25	25
7500-T	7500	45	36	26
10000-T	10,000	56	42	34
15000-T	15,000	56	42	34
20000-T	20,000	56	42	34

THREE PHASE OUTPUT

MODEL	POWER OUTPUT VA	DIMENSIONS (Inches) H	W	D
Y-5000-T	5000	45	25	25
Y-7500-T	7,500	58	30	30
Y-10000-T	10,000	58	30	30
Y-15000-T	15,000	78	34	34
Y-20000-T	20,000	78	34	34

NOTE:

Two phase and four phase units are available on short delivery. All "T" units are in semi-military angle and skin enclosures. The bottom is fitted with skids for fork lift truck. Casters and/or removable lifting eyes are available on request.

PLUG-IN OSCILLATORS FOR "S" AND "T" SERIES

These oscillators feature all silicon solid state components and precision variable frequency determining elements and are available in **single phase, two phase,** and **three phase.** All single phase oscillators are provided with an external signal input.

Frequency stability: Oscillators may be ordered with frequency stability ranges from ±0.5% thru ±0.001% as shown in the table below.

FREQUENCY RANGE	FREQUENCY STABILITY ±0.5%	±0.25%	±0.1%	±0.01%	±0.001%
ANY FIXED FREQUENCY BETWEEN 45 and 10 KHz	X	X	X	X	X
VARIABLE					
45 to 75 Hz	X	X	X		
320 to 480 Hz	X	X	X		
320 to 2000 Hz	X	X	X		
45 to 6000 Hz	X	X			
45 to 10000 Hz	X	X

MINIATURE HIGH VOLTAGE CAPABILITIES

- variable DC to DC converters
- photomultiplier power supplies
- precision cathode ray tube power supplies
- multiple-output high voltage power supplies
- image intensifier tube gated power supplies
- nanosecond-switching kilovolt pulse generators
- high voltage multipliers
- high voltage oscillators
- remote controlled intensifier tube "zoom" power supplies
- kilovolt test sets for gated image intensifier tubes
- fast switching power supplies for TWO-COLOR cathode ray tubes

CATHODE RAY TUBE POWER SUPPLIES Model G-10

G-10
PRICE $490

- output adjustable from 1000 to 10,500 VDC @ 500 μa
- ripple 0.15% peak-to-peak at full load
- line regulation $\pm$.01%
- load regulation $\pm$.1%
- efficiency >50% at full load
- MTBF 42, 100 hours at 71°C
- 3¾" x 2$^{9}/_{16}$" x 1½" (15 cu. in.) 1¼ lb.
- operates from —55 to +71°C
- 50,000 ft. altitude
- MIL-E-5400
- input voltage 24 to 32 VDC
- short circuit and reverse-polarity protected
- temperature coefficient 0.025%/°C from —55°C to +71°C

Model H-20

H-20
PRICE $650

- output adjustable from 10 KV to 20 KVDC @ 500 μa
- ripple 0.05% P/P at full load
- line/load regulation $\pm$0.05%
- efficiency >50% at full load
- 4⅞"x3⅛"x1⅞" (30 cu. in.) 2.5 lbs.
- operates from —55 to +71°C
- shielded, encapsulated
- short circuit and reverse-polarity protected
- temperature coefficient 0.005%/°C from —55°C to +71°C
- input 28 VDC $\pm$10%
- available with negative output same price— Model H20N

TUAL SIZE

PHOTOMULTIPLIER POWER SUPPLIES

- small — 1" dia. x 2¼" long
- shielded, encapsulated
- operates from —55 to +71°C
- qualified per MIL-STD-810
- MTBF >100,000 hr at 71°C
- output proportional to input
- fast response
- output floating; input floating
- short circuit protected
- reverse-polarity protected

photomultipliers — flying spot scanners — image dissectors — ionization chambers
scan converters — CRT bias circuits — scintillation tubes — geiger tubes

Model	Input	Output Range	Ripple (p-p)	Efficiency at Full Load	Price (1-9)
K15	3V to 15V	300V to 1500V @ 1.0 ma	0.1%	>50%	$149
K30	3V to 15V	600V to 3000V @ 0.5 ma	0.5%	>50%	$158
Q30*	2V to 12V	600V to 3000V @ 0.2 ma	0.25%	>60%	$168

**Designed for battery applications—Idling current only 8 ma.*

For operation in vacuum environments, these units will be supplied in a 3" long can having a high vacuum seal. In specifying a vacuum unit, add the suffix "Z" to the model number (i.e. K30Z) and an additional $30 to the unit price.

0-6.75

HIGH VOLTAGE OSCILLATORS

- fixed or proportional output
- short circuit protected
- reverse-polarity protected
- miniature packages
- flat packs for insert mounting
- designed for image intensifier applications

Model	Input	Output (p-p)	Nominal Frequency	Type	Price
32R4	18 to 32 Vdc	1200 Vac to 3500 Vac	10 KHz	Adjustable, line regulated	$265
0-6.75	6.75 Vdc	2800 Vac (overvoltage protection)	3 KHz	Output proportional to input	$98

32R4 Dimensions: 3" x 1¾" x ⅞"
0-6.75 Dimensions: 1" Dia. x 1⅞" L

RS03FLC

HIGH VOLTAGE GATE GENERATOR IMAGE INTENSIFIER TEST SET

- PRF to 10 KHz
- Output gate can be floated to ±25 KV
- Completely solid state
- 55 ns rise and fall times
- Max. Pulse Amplitude . . . 3000 v P/P
- Pulse Width Adj. from 0.5 μsec. to 100 msec.
- Pulse Delay Adj. from 0.3 μsec. to 50 μsec.

PLICATIONS:
QC nspection/test ■ laboratory simulation ■ high speed shutter for image intensifier tube ■ automatic exposure control in nsifier tube or photomultiplier ■ LIDAR range gate ■ direct viewing image intensifiers ■ vidicon coupled image intensifiers

SINGLE OUTPUT

WIDE ADJUSTMENT RANGE

- SAME DAY DELIVERY
- LOW COST
- 0.01% REGULATION
- LOW RIPPLE
- FULL 5 YEAR WARRANTY
- 3 WAY MOUNTING

. . . developed for use in applications requiring PRECISION, STABILITY, RELIABILITY, FLEXIBILITY in terms of wide adjustment capability, and QUICK DELIVERY all at a reasonable cost.

Using a unique circuit approach and only the highest quality components, VIKING MODULES "100" Series Power Supply Modules enable you to select and cover the great majority of your modular power supply requirements from a small list of modules.

100 SERIES Specifications

CASES

A

B

C

Input Voltage: 105-125VAC, 47-420Hz
Output Voltage: See Table Below
Output Current: See Table Below
Polarity: Positive, Negative, or floating to 300 Volts
Regulation: 0.01% or 1MV
Ripple: See Table Below
Temp. Coefficient: 0.01%/°C
Operating Temp. Range: -20°C to +71°C
Long Term Stability: 0.025% for 8 hours
Response Time: Less than 20 microseconds
Overload & Short Circuit Protection: Electronic Instantaneous recovery and automatic reset from o loads or short circuit conditions. Complete protection
Remote/Local Sensing: Connections on terminal block
Remote/Local Adjustment: Simple wiring change
Series/Parallel Operation: For higher voltage or for higher current. Consult factory.
Overvoltage Protection: Available as option. Add Prefix "C" to model number.

THE **ONE** SOURCE FOR **ALL** YOUR POWER CONVERSION EQUIPMENT REQUIREMENTS

WANLASS POWER

Wanlass Power Supplies...

CUSTOM OEM ASSEMBLIES

Power supplies, voltage regulators, inverters, converters, frequency converters and filters custom designed to meet your exact need. Conventional solid-state designs or Wanlass proprietary PARAX®, CLIP-AC™ and VARAX™ techniques in any configuration.

LAB INSTRUMENTS

Complete instruments in rack-panel or bench configurations for multi-purpose power supply requirements, AC power conditioning, dynamic line filtering, and voltage regulation, including PARAX® and VARAX™ technology for transient-free lab power!

STANDARD OEM ASSEMBLIES

The same technologies applied to standard OEM units available for immediate delivery from stock of more than 100 distributors across the nation. The "special" you have in mind could be a standard "off-the-shelf" unit stocked locally.

MILITARY ASSEMBLIES

High reliability power supplies designed and produced at state-of-the-art levels of technology. You'll get production with quality control conforming to MIL-Q-9858A, performed in highly automated "clean room" facilities.

WANLASS "DPS" LINE — 5/6, 12/15, 24 & 200V SUPER ECONOMY D.C. UNITS FOR OEM SYSTEMS

WANLASS O.E.M. ECONOM by DESIGN

MODEL NO. DPS-1

REGULATED 5/6, 12/15, 24 & 200V. LOW COST OEM SYSTE D.C. POWER SUPPLIES ONLY $24.95!* — 4 DIFFERENT MODE OF 6 POPULAR D.C. OUTPUT VOLTAGE AND CURRENT RATING

SPECIFICATIONS

A.C. INPUT: 115V ±10%, 1 phase, 60 Hz (Derate 20% for 50 operation).

D.C. OUTPUT: See "tabulation of models and rating available".

REGULATION: ±1% for line and load changes.

RIPPLE: 1% RMS (typically 0.5% RMS).

FEATURES: Overload and short circuit protection — automatic "fo back" current limiting — automatic recovery after short c cuit or overload is removed. Optional overvoltage protecti available at slight additional cost.

DIMENSIONS: DPS-1, 2, & 3: 4" W. x 2.5" D. x 4.5" H.; DPS-4: 4" W 3" D. x 4.5" H.

WEIGHT: DPS-1, 2, & 3: 2 lbs.; DPS-4: 2.5 lbs.

WANLASS "BRUTES" — HIGH POWER D.C. SLOT SUPPLIES

WANLASS O.E.M. ECONOM by DESIGN

WANLASS BRUTE II; REGULATED 600 WATT 5-50 V @ 12 A and/or 2-25 V @ 24A.

FOR HIGH POWER D.C. SLOT SUPPLY REQUIREMENTS, CHOO ONE OF THE THREE WANLASS WIDE VOLTAGE RANGE "BRUTES"!!; AT LOWER THAN "SLOT" SUPPLY PRICES!

NO NEED TO STOCK A VARIETY OF "SLOT" SUPPLIES — ONE UNIT PROVID WIDE OUTPUT CONTINUOUSLY ADJUSTABLE VOLTAGE RANGE OF 5 TO VOLTS OR 2-25 VOLTS IN RATINGS OF 300, 600 and 1200 WATTS!

GENERAL DESCRIPTION

High Efficiency, High Power, Low Cost, Quiet Operation and Immediate Ava ability are features of the new WANLASS "BRUTES"!
These Silicon Controlled Rectifier Regulated D.C. Power Supplies employ hi reliability phase control for power regulation. The efficient, noise-free operati is achieved through the use of a series inductance and capacitor filter circu

SPECIFICATIONS:

A.C. INPUT: 115/230 V ± 10%, 1ϕ, 47-63 Hz

D.C. OUTPUT: See Tabulation

REGULATION:
- **Line:** ± 0.1% or 50 mV
- **Load:** ± 0.1% or 50 mV

RIPPLE: 1% or 500 mV RMS

PROTECTION: Adjustable Current limiting for overload & short circu protection.

NOTE: Unit also features adjustable "damping" for reactive loac

BRUTE III	5-50/2-25	24/50 A	10" x 12" x 14"	50	$315.	$299.	$284.	$26

* Can be connected either for 5 to 50 volt or 2 to 25 volt depending upon output current desired.

OPTIONAL EQUIPMENT:
K1 — Ten Turn Potentiometer Kit for Fine Voltage Adjust — $20.00 each
K2 — Ripple Reduction Kit (Reduces Ripple by 50%) — K2-I & K2-II for BRUTE I & II: $25.00; K2-III for BRUTE III @ $52.
K3 — OVP for all BRUTES: $49.50 (Universal unit — may be used with any D.C. Power Supply within 6-60 volts a 0-500 A Range

WANLASS CLIP-AC

WANLASS CLIP-AC C-3000 117V. A.C. VOLTAGE REGULATORS

C-3003

C-3006

C-3012

C-3025

C-3050

C-3100

HERE ARE SOME OF THE OUTSTANDING CHARACTERISTICS OF WANLASS C-3000 VOLTAGE REGULATORS USING THE CLIP-AC™ PRINCI

C-3000 FEATURES

- Line and Load Regulator
- Wide Input Voltage & Frequency Range
- Peak Clipping Regulation Technique
- Quiet Operation—No Magnetic Noise
- Repairable All Silicon Solid-State Circuits
- High Efficiency
- Suppresses Line Transients
- Excellent Surge Loading Characteri
- Instantaneous Response
- "Clipped" Sinusoidal Output
- Excellent Temperature Coefficient
- No "Magnetic" Fields Nor RFI

C-3000 APPLICATIONS

- Instruments Pre-Regulator
- Electronic Systems
- Electrical Systems
- Photo-Optical Systems
- Initial Surge Loading Applications
- Motor Starting and Regulation
- All Resistive Loads such as Lightin Heating

APPLICATION

The CLIP-AC™ type AC regulator is the logical successor to the ferrores transformer for the bulk of the AC regulation requirements for up to 1

	CLIP-AC™ Principle	Ferroresonant Principle
Input Frequency	Wide range acceptable without degradation in regulation (47-420Hz typical)	Single frequency (output volta shifts 1.5% for 1% change in input frequency)
Line Regulation	Any reasonable degree of precision (0.1% easily achievable)	Cannot be modified (1-3% typi
Load Regulation	Load compensation circuitry inherent in design (1% typical)	No compensation (5-7% typica
Power Factor	No problem	Shifts output voltage level appreciably
Phase Shift	None	Appreciable — dependent on l current
Response Time	Typical 10-50 μsec	Typically 25,000 μsec
Cost	Smaller and Cheaper-less	Inherent weight and expense c
Size	material content	iron and copper
Weight	(typically 50%)	

C-3000 SPECIFICATIONS

A.C. INPUT: 100-130V., 1-Phase, 47-420 Hz
A.C. OUTPUT: 117V. nominal (see table of Model Numbers and ratings below)
Surge output rating: 400% of full power rating for 10 seconds
REGULATION (RMS): ±0.5% (for ±10% A.C. line change)
±0.5% (for 10% to full load change)
TYPE OF VOLTAGE REGULATION: True RMS with RMS sensor type referenc
REGULATION TECHNIQUE: Peak Clipping
POWER FACTOR REGULATION: ±0.5% (+0.7 to —0.7)
FREQUENCY REGULATION: ±0.5%
EFFICIENCY: 75% minimum at nominal input voltage full load
PHASE SHIFT: None
RESPONSE TIME: 10-50 microsecond
TEMPERATURE COEFFICIENT: 0.025% per degree C
OPERATING TEMPERATURE: —20°C to +50°C. Convection self-cooling; no external heat sinking required
OVERLOAD PROTECTION: Fused against overloads and short circuits

SEALING, CLASSIFYING AND BONDING EQUIPMENT

LABORATORY AND PILOT FLAT PACK SEALER/FP-VP-1M

A perimeter type, hermetic sealer for IC, Thick and Thin Film Packages. Sophisticated solid state circuitry permits complete control over the sealing atmosphere, location of heat, time at temperature and rate of heat-up and anneal rates. All the sealing stages are adjustable, flexible as to sequence and preprogrammed when desired; though any stage can be suspended or by-passed for experimental purposes.

Packages can range from ¼" x ⅛" to 1¾" x 1¾" and may be of glass, "Kovar"* or ceramic.

PRODUCTION FLAT PACK SEALER/FP-VP-17

(Seven head model illustrated)

ato precision at production rates is adntage of this perimeter type, multi-hemetic sealer for IC, Thick and Thin Packages. Similar to the FP-VP-1M de-ed bove, this sealer can be provided or to ten independently monitored ng eads.

Preprogrammed to the proper sealing profile for the particular package, the sealer automatically purges, evacuates, backfills with inert gas, perimeter heats (heatsinks protect the device), anneals the package automatically and recycles precisely. Depending on the number of sealing heads, packages up to 1¾" x 1¾" can be sealed.

GLASS-TO-METAL PROGRAMMABLE SEALER/DAP-700

For glass-to-metal sealing, soldering and brazing operations at precisely controlled temperatures up to 1,000°C with complete control over the sealing atmosphere for vacuum, positive pressure and inert gas, this solid state controlled sealer can be completely preprogrammed for all parameters of the sealing cycle. Custom tooled for semi-automatic loading, the sealer can seal most standard types of semiconductor packages and component parts.

PACKAGE SEALING APPLICATION CENTERS

As a major supplier of glass and metal parts, "Flat Packs" and many other "Hi Integrity" packages as well as sealing equipment, GTI is uniquely equipped to help the engineer develop reliable sealing procedures and maximum production yields. Application centers are located in Costa Mesa, Calif., Providence, R. I., Peabody, Mass., and Miesbach, West Germany. Any GTI Sales Engineer can arrange for analysis and recommendations on your package situation.

*"Kovar" is a registered trademark of Westinghouse Electric Corporation.

290 Ultrasonic Wire Bonder is a semi-mat unit that eliminates circuit heating pro ctive atmospheres when bonding cu g off aluminum or gold leads to e. nsistor, or monolithic chips, hybrid tra interconnect pads or packages act

The 2906 Ultrasonic Flip Chip Bonder completely eliminates wire bonding with the new Glass Ambient Devices with their integrated uniplane "bump" for direct bonding to metallized thin or thick film circuit pads without heating of the circuits or protective atmospheres.

The 2907 Automatic Die Classifier is a self-contained, trouble-free handler for high speed production testing and classifying of semiconductor dice and flip chips.

NEW High Speed Thermo-compression Die Bonder

DB100

5 Times Faster and More Accurate

Meet your new "Money-Maker" — our high speed Thermo-compression Die Bonder, Model DB 1000. You'll hear much of this one.

It's fast — capable of 7200 cycles, or 6000 parts per hour. That's a 500% increase (minimum) over present semiconductor production capacities.

It's versatile — strip bond to 1½" width, discrete strip devices or I/C strips; or adapt to carrier belts and a wafer capacity of 3½" diameter. Strip index is infinite within a range of .050" to 1.500" spacings. Choose programmed XY stage die loading or fully automatic die bonding.

It has the features — such as high speed ac eration pick up and deposit. Adjustable bon force between 30 and 200 grams. Solid s machine controls. Proportional heat control wi ±2°C accuracy at the bonding point.

Next of kin to our wafer alignment systems, new Die Bonder is the latest accomplishment series of sophisticated electro-mechanical ins ments designed to increase your production yi

Universal ENGINEERED ELECTRONI

PRINTED CIRCUIT BOARD INSERTION MACHINE

COMPUTERIZED TOTAL SYSTEMS . . . PANTOGRAPH OPERATED . . . NUMERICALLY CONTROLLE

AXIAL LEAD COMPONENTS

NEW COMPUTER CONTROLLED VARIABLE CENTER DISTANCE MODEL 6264 inserts axial lead parts into PC boards on as many as 999 different center distances between pads from 0.300″ to 1.260″ with a single board handling. Programmable for wire diameters from 0.015″ to 0.32″ and 0.020″ to 0.037″

DUAL CENTER DISTANCE MODEL 6271 N/C (also available with computer control or pantograph) for insertion at two adjustable center distances. Programmable 8-position depth stop. More economical to purchase than a fixed head machine plus a second head for alternate center distance—with all downtime for changeover eliminated.

PANTOGRAPH — FIXED CENTER DISTANCE inserts reel packaged axial lead components at rates in excess of 2,000 an hour; rates as high as 5,600 have been attained.

N/C FIXED CENTER DISTANCE MODEL 6253 (also available with dual heads) inserts sequenced axial lead components at rates in excess of 4,500 an hour.

OTHER INSERTION MACHINES include jumper wire . . . square "wire wrap pin" . . . wire "stitcher" . . . PC board terminals . . . drill press. Additional adaptations of Universal's basic pantograph and N/C positioning systems can be produced to meet special requirements where close tolerance parts location is needed.

DUAL IN-LINE PACKAGES

N/C SEQUENCE-INSERT MOD 6752 selects DIPs from up to 16 Barnes carr magazines and inserts in programmed sequences at rat as high as 2,500 an hour. Also available with computer contr

PANTOGRAPH — INSERT MODEL 6413 inserts DIP's from Barnes carrier magazines at rates up to 1,800 an hour. Models also available to sequence and insert 4, 8, or 16 different DIP's from Barnes magazines or stick input.

TRANSISTORS

LEAD TAPED transistors can be i serted as "axial lead" componen at rates of approx. 4,000 an hr.fro this N/C Model 6352. Also availab with pantograph operation.

BOWL FED transistors are inserted as "axial lead" components at rates as high as 3600 from this Model 6351. Other models available to insert transistors "conventional" position.

CONTRACT MANUFACTURING . . . SHORT RUN STAMPING. Universal also offers extensive modern facilities for contract manufacturing, ranging from prototypes to production scale runs, using latest facilities for electronic assembling and short run stamping.

CTRO-MECHANICAL PRODUCTION EQUIPMENT

MPONENT PACKAGING MACHINES

AXIAL LEAD COMPONENTS

CING SYSTEM MODEL 2521, ched tape control, prepares axial lead components in se- or automatic PC board inser- to 39 dispensing stations can rom lead taped units, maga- cardboard packages.

LEAD TAPING MACHINE 315 lead tapes and reel pack- nponents. Available with bowl d straightening & trimming, and orienting accessories. at rates as high as 15,000

DUAL IN-LINE MODULES

BARNES CARRIER LOADER MODEL 4411 inserts bowl fed DIP's into carriers at rates up to 4,000 an hour.

TRANSISTORS

◀ "PREPPER" — LEAD TAPING MACHINE MODEL 3315 forms bowl fed transistors into "axial lead" components and reel packages them ready for PC board insertion at rates as high as 7,000 an hour.

PREPPER MODEL 3421 pre- ▶ TO-18 and other transistors for nical insertion into PC boards at p to 5,000 an hour.

SEMI-AUTOMATIC WIRE TERMINATION SYSTEMS

NEW COMPUTER CONTROLLED SINGLE HEAD MODEL 6954 terminates 24 and 30 AWG wires, including twisted pairs, at rates up to 400 wires an hour. Can be changed over in minutes for clip on wire termination. Drastically reduces rework time by eliminating wiring errors due to misplacement or wrap quality. Also available with N/C.

SINGLE HEAD MODEL 6951 is designed for smaller back panels with a wiring area not larger than 16″ by 18″. Operating features are similar to Model 6952.

COMBINATION N/C WIRE TERMINATION & DIP INSERTION system designed for use where volume does not justify separate machines. Production rates equal single function models, but only one assembly operation can be performed at a time.

COMPONENT PROCESS SYSTEMS & CUSTOM PRODUCTION EQUIPMENT

Process line sub-assemblies and complete systems can be supplied for automated operations including diode, capacitor and resistor assembly, testing, orienting, sorting, body coating, marking, curing, and reel packaging. For full information send for Bulletin 2000.

FOR QUALITY P/C MANUFACTURING EQUIPMENT

K-P DIP COATING SYSTEM

FORSLUND CIRCUIT PRINTER

SOMACA CIRCUIT BOARD CLEANER

The Kressilk Line features Excellence. Every item has been tested for quality of manufacture, but more importantly for efficiency of operation. You can depend on K-P for top performance in every department.

Arc lamps, dark room accessories, plate printers, screen fabrics, chases, screen printers, inks, resists, etchers, degreasers, cleaning and drying equipment, soldering and drilling machines, every one tested and guaranteed to deliver the ultimate in circuit board manufacturing efficiency.

In this "precision-minded" profession, Kressilk has been supplying the finest fabricating equipment for many years and all our products stand up to rigid demands for precise, repeatable calibration, register and processing. Kressilk stands behind everything it delivers.

Crown® PRECISION TAPE RECORDERS WIDEBAND POWER AMPS

All models handle ¼-inch tape and reels 5" to 10½", all 19" rack mount.

Standard speeds 15 - 15/16 ips with 1 to 4 channels.

Patented electro-magnetic brakes never need adjustment.

Lifetime lubrication of all bearing surfaces.

True straight-line threading with easy-edit design.

Individual erase, record and play heads for 1, 2 or 4 tracks.

Six years proven solid state circuitry - etched circuit modules.

Extremely low noise electronics; modular transport construction.

Strict quality control with individual proof-of-performance records - entirely American made.

Over 40 standard models $545-$3700; custom modifications for OEM use.

Also available: slow speed data loggers (down to 0.33 ips), duplicator systems, and complete series of players and decks.

TO BASIC TAPE DECK STYLES:

70 Rugged, high quality simple unit with only 9 moving parts; automatic stop in "play" mode.

80 Basic 700 construction plus computer logic control which never breaks tape; IC logic levels for remote control and function readout; ideal for systems integration; 10 moving parts; photocell tape sensor, edit switch, cue lever; automatic replay accessory.

FOUR STYLES OF ELECTRONICS:

Varying features and degrees of flexibility to match user requirements. Contact sales dept. for complete descriptions.

TYPICAL PERFORMANCE CHARACTERISTICS

(varies with model & options selected)

*Subject to change without notice

DC300 - Lab Standard DC Amplifier
Outstanding for exceptional signal purity and stability coupled with unusually high power capabilities. Output ±50 volts DC, 35 volts RMS AC. DC drift under 3mv up to 55° C.

D150 - High Power Audio Amplifier
Excellent general-purpose power amp with outstanding response, distortion and stability.

D40 - Ultra-Compact Audio Amplifier
Small, high quality amplifier with unusually wide power band-width.

All Crown amplifiers are completely stable two-channel units with internal protection for all loads. Rugged instrument-grade construction guaranteed three years for parts and labor. Custom modifications available for quantity OEM purchases.

Transmission Terminals For Data, Control, Telephone, Telegraph and Telemetering Applications

Data

RFL Industries, Inc. offers a complete line of data modems for all computer, data terminal and time sharing applications. Now with the advent of the FCC's decision concerning "foreign attachments" you may electrically connect privately purchased, rented or leased data modems to your conventional telephone line.

A complete line of data modems are available and are all compatible and will transmit into Bell data sets (103A-103B-103F-201B-202B-202D) with the same dependability and reliability that goes into all RFL equipment.

The Model 3952 Data Modem is a high speed unit for transmitting and receiving digital data. It transmits and receives serial binary data over a voice bandwidth at a synchronous rate of 2400 bits per second. Applications include all present day transmission equipment including conventional and dedicated telephone lines, power lines, microwave transmission and radio. The 3952 is compatible with all features and options of the Western Electric 201B data set and will operate end-to-end with W. E. equipment

The 13AO/TTY is an asynchronous modem for either direct hardwire or acoustical coupling, providing TTY models 28, 33 or 35 interfaces. The unit operates over two-wire circuits, such as the DDD network or four-wire circuits, such as a leased dedicated line. Particularly designed for computer time sharing over the DDD network and intercommunication with teletype terminals, it will also operate with a Western Electric 103A Dataphone.

The new Model 3227, coherent modem, is capable of transmitting high speed binary coded data and clock information simultaneously. There is no need for expensive synchronized clocks in end-equipment. The need for accurate timing is also eliminated, permitting operation through adverse conditions.

AM and FS Voice

The 2056 Series represents the ultimate in tone channel design in as much as a single packaging concept is employed to accommodate all tone channel requirements for any application.

AM channels may be intermixed with FS channels and various combinations of both types of receivers and transmitters are accommodated.

Basic modules are provided which are common to all applications. Special requirements which are peculiar to particular systems and applications are provided by accessory modules mounted on plug-in cards similar to the basic modules and connected at the rear of the mounting shelf. This packaging concept provides for maximum economy and versatility since basic modules are common to all applications encountered in telemetering, control and telegraph applications.

Analog Telemeter

The Model 2203 Variable Frequency Telemeter system provides complete circuitry for telemetering DC or low frequency AC voltages by means of an audio frequency shift carrier which is modulated at a sub-audio frequency rate of 10 to 30 Hz or by polar current pulsed at 10 to 30 Hz. Full-scale span of the measured DC quantity is represented by the 10 to 30-cycle modulation frequency which is directly proportional to the EMF applied to the transmitter. At the receiver, the telemeter signals are demodulated, and the output DC potential or current is directly proportional to the modulated signal. This output may be used to operate potentiometer recorders and DC milliammeters. Modified modules are also available for modulation frequencies of 7.5 to 15 Hz for use over narrow band transmission facilities. Other frequencies are also available.

Any DC input voltage range of 20-millivolt to 1000-millivolt span is available as standard. Modules are also available for slide-wire and higher voltage inputs. Output current from the receiver has a 2 milliampere span into 2500 ohms maximum for 10 to 30-Hz modulation frequency variation. Output current up to 50 ma also available.

SSB Voice

The Model 2710 SSB Terminal was designed to provide a high quality voice channel for voice communication or data transmission for application to microwave, static, power line and radio system basebands. Two basic groups, one of 14 channels, and occupying the frequency spectrum 4-60 kHz, the other of 12 channels, and occupying the frequency spectrum from 60-108 kHz are available. The channels may be applied singly or in groups without common equipment. Since the 2710 ticularly suitable to low density requireme attempt has been made to overcrowd comp which would reduce system flexibility and cate system and maintenance procedures. Al circuitry including channel filters are provid front panel test points and controls for conve in system monitoring and servicing. By dual lation, channels up to 300 kHz are available.

"TELCO" Equipme

RFL is telephone oriented — with nearly century of experience in the manufacture o munications equipment and systems. The new 3450 T1 PCM cable carrier uses pulse code m tion techniques, time division multiplexing, transmission circuits and has minimal maint requirements. The 3450 T1 carrier is com and identical in overall system design wi Western Electric "T1". Various standard ty naling modes, compatible repeaters, one-wa dial, revertive pulsing modules and carrier alarm facilities are just some of the availab options.

OTHER TELEPHONE EQUIPMENT

The Universal Wire-Wrap Chassis provides to accept eleven separate "plug-in" modules applications are obtainable by simply inserti proper modules and wiring the wire-wrap ter associated with the modules to be used. Th versal Chassis will serve present and future and is available in 19" rack mounting, wall ing or desk set models. Applications for this tile chassis include seven port resistance b active amplitude equalizers, impedance com tors, power supplies, regulators, filter net 4-way 4-wire bridges, repeaters and a wide of circuits using standard RFL modules.

All terminals are fully transistorized and mi ized using modular type construction for mi space requirements and ease of maintenanc lowing a maximum of channels to be installe out sacrificing versatility, performance and adaptability. All units are standard 19" rack mo with other mounting options available.

TELEMETRY SYSTEMS AND COMPONENTS

FM MULTIPLEX EQUIPMENT

uen division multiplexing allows a number of different data nnels o be transmitted simultaneously on a single link — either tele one or coaxial cable — or to be recorded on a single track a ma etic tape recorder. The measurement signals from trans- ers odulate subcarrier oscillators (VCO's) tuned to different uen s. The outputs of the VCO's are linearity summed and the posi signal is transmitted or recorded. At the receiving end, carri discriminators divide the composite signal into the indi- al ocarrier signals and demodulate them to produce the inal easurement signals. FM multiplexing equipment includes:

orm
tage-ontrolled Oscillators
olat Input
igh-vel Input (5v)
ow-Level Input (10mv)
iniare or Micro-Miniature
8-Vo Operation
mmi Amplifiers
tage alibrators

METEOROLOGICAL SYSTEMS

he del 3703 Meteorological Data Processor operates in conjunc- on th an AN/GMD Rawin Set or WBRT Radiotheodolite to auto- atic ly acquire digital meteorological data for storage on punched ape tape or magnetic tape. The data, which includes tracking ngle slant range, temperature, humidity and elapsed time, is roce ed to suit transmission line and/or computer input. Peri- hera equipment includes:

igita Printer
ape splay Unit
utpu Format Converter
est uipment

TIME DIVISION MULTIPLEX EQUIPMENT

Time-division multiplexing allows a number of different data channels to be transmitted sequentially on a single link—either RF, telephone or coaxial cable — or to be recorded on a single track of a magnetic tape recorder. A commutating device (multiplexer) sequentially samples the measurement signals from transducers. The commutator output is a series of pulses whose amplitudes correspond to the sampled values of the input channels from the transducers. This train of pulses is then transmitted by pulse amplitude modulation (PAM) or further processed to other transmission formats such as pulse duration modulation (PDM) or pulse code modulation (PCM). At the receiving end, the process is reversed to decommutate the pulse train to produce signals which correspond to the original measurement data. Available equipment includes:

Airborne Digital

PCM Systems
PAM Commutators
PDM Commutators
Addressable Commutators and Multiplexers
Voice Multiplexing and Demultiplexing Systems

Ground Digital

Single-Channel Decoders
Digital Demultiplexers
Signal Conditioners

MEDICAL ELECTRONIC SYSTEMS

The Model 56 Data Transmitter, combined with the Model 57 Data Receiver, provides the capability to multiplex up to six channels of analog data for transmission over leased telephone lines. This data modem has found wide use in transmitting ECG data from a remote intensive care center to a central monitoring hospital. Other physiological uses include transmission of information such as EEG, temperature and pressure. Specifications include:

Isolated Input
All Solid-State
Tape-Speed Compensation
DC to 100 Hz Bandwidth
±2.5-Volt Input

FM TRANSMITTERS

Airborne solid-state units, available for either VHF or UHF applications, feature:

FIG. 5

microminiature lightweight | low power low level | high speed high efficiency | rugged linear | indefinitely long life temperature stable

FREQMETERS, DISCRIMINATORS, PHASEMETERS

Solid state frequency-to-dc converters and discriminators will linearly convert frequency or repetition rate of signals to a proportional dc output. Waveforms can be sine, square, pulse, sawtooth or triangular. Standard models are available to cover a wide range from zero to 300 kcps. Expanded scale, differential frequency, under/over frequency and phase detectors are available (meter, meter relay and relay types are also available). These units have been designed for applications where stability, ruggedness, long life, efficiency and freedom from maintenance are prime requisites. Miniature, stable and rugged designs make these units ideal for military, aerospace, industrial and portable applications.

Only the Models 400 to 440 Freqmeters are basic f-dc converters, the output being proportional to the product of frequency and peak input voltage. The 410KF to 440KF are solely frequency dependent (independent of peak input voltage). 450KF to 480KF units require lower drive (millivolts). 410M to 440M units have a visual panel meter readout. The 410MR to 440MR have visual panel meter relay readout with external min-max adjustments. Tl 486E is an expanded scale Freqmeter while the 491ME is a mirrored-sca visual panel meter version. The 411 and 421 units are difference Freqmeter The 401 series FM discriminators are for IRIG channel telemetering. The 4 is a Hi-Lo pass frequency sensitive relay suitable for under/over frequen and speed detection and control. The 476 frequency detector is a narr bandpass frequency sensitive relay. The 791 Phasemeter is a phase-t voltage converter.

You'll find microfilm data sheets and application notes in VSMF or t Thomas Supplementary File.

If you have a special requirement, phone, wire or write for an immedia reply or catalog. Shipments can be same day, if you call early.

OSCILLATORS — PULSE, SQUARE WAVE, RAMP, SAWTOOTH, TRIANGULAR, SINE
CLOCKS, PULSE GENERATORS — XTAL, TUNING FORK, RC, LC VOLTAGE CONTROLLED

CONVERTERS — VOLTAGE-TO-FREQUENCY, PRESSURE-TO-FREQUENCY

AMPLIFIERS — MICROVOLT OPERATION, LO DRIFT, ZERO OFFSET, NO COMPENSATION, 300MΩ INPUT IMPEDANCE, NO LATCHUP
OPERATIONAL—DIFFERENTIAL

TELEMETERING, SIGNAL CONDITIONING, DATA ACQUISITION & PROCESSING • SPACE, AIRBORNE, MILITARY, GROUND SUPPORT • INDUSTRIAL, RESEARCH & DEVELOPMENT APPLICATIONS

microminiature lightweight | low power low level | high speed high efficiency | rugged linear | indefinitely long life temperature stable

OSCILLATORS, CONVERTERS & OPERATIONAL AMPLIFIERS

DESCRIPTION

Solid state oscillators and converters are available in many types (MIL-SPEC too). S-100, S-200 are LC sine oscillators (rugged and stable). The S-300 is tuneable, not as rugged, but excellent for ground support equipment. C-110, CH-114 (400 cps reference) are heater-crystal controlled, fully encapsulated for ruggedness. PG-111, PG-112 and PG-113 are crystal controlled, (no heater) square wave generators, ruggedized and miniature for airborne, military and space applications. The TF-120 is a tuning fork reference sine oscillator. Series 300VF Voltage-To-Frequency converters change analog signals to the frequency (time) or digital domain (use electronic counter) and are perfectly matched to our Series 400KF Freqmeters. The V-510, V-513 (20 millivolt input) Voltage Controlled Oscillators (VCO) are designed for IRIG FM telemetering. The V-521 is a micro-version of the V-510 (without output bandpass filter). AD-551, AD-552 (20 millivolts input) are Voltage-To-Frequency Converters with sine wave output. PF-1001, PF-1007 are Pressure-To-Frequency Converters (potentiometer type) respectively matched to a V-510 VCO and a 300 VF V-to-F converter. The OS-1005 converts Pressure-to-Frequency directly via varying inductance (diaphragm type). The 5001 FM Transmitter and the 5002 VCO go together for a single channel miniature telemeter. The 5021 TELEMOD combines the two in a single micro-package. The TCD-101 is a solid state chopper or demodulator driver (square wave inverter) with 4 isolated output windings. The Model 3001 differential operational amplifier is a workhorse and you can assign it to a multitude of analog functions. The Model 3051 is an isolated single-supply (28 VDC) version of the 3001 (dual-supply). The Model 3002 op-amp is superlative in its capabilities, i.e. microvolt input, 0.6 microvolts/°C. and 2 picoamps/°C. drift, 300 megohm input impedance, short-circuit proof, no compensation required, no latch-up, zero offset adjustable, wide temperature range, microminiature, replaces chopper-stabilized amplifiers. You'll find microfilm data sheets and application notes in VSMF or the Thomas Supplementary File. Phone, wire or write our engineering department for a quick considered quote on your specifications or for our catalog. Shipments can be same day if you call early.

2 SERIES VARIABLE FILTERS

2AB, 2B, 2C, 2D
High Pass, Low Pass,
Band Pass

Model 210 R
Band Reject

- ☐ Passive Network
- ☐ Continuously Variable
- ☐ No Power Required
- ☐ No Internal Noise
- ☐ Portable or Rack Mount

PRICES — FOB FACTORY

Model	Freq. Range	Wt.	Price
2AB	15Hz to 20KHz	27	$495.00
2B	60Hz to 20KHz	24	395.00
2D	240Hz to 80KHz	21	385.00
2C	9KHz to 670KHz	21	375.00
210	35Hz to 20KHz	20	425.00
AL483 Input Transformer	10K ohms to 600 ohms		35.00
AL484 Output Transformer	600 ohms to 50K ohms		35.00

Frequency Range 20Hz to 20KHz
Hermetic Sealed Capacitors — Plus 15%

The 2 Series are general purpose tunable audio and low R filters. Independent high pass and low pass sections can b combined for band pass operation. Low pass filter will pas DC to cutoff frequency. Hum-bucking construction and shielde from electromagnetic fields. Model 210 Band Eliminatio filter has one octave width at −3 db points and center fre quency attenuation from 28 to 45 db. Plug in impedanc matching transformers available to change 600 ohms to 10 input and 50K output.

Size: Portable — 7½″ H. x 17″ W. x 8″ D. overall
Rack — 7″ H. x 19″ W. x 8″ D. overall

MODEL 655C RANDOM NOISE SOURCE

- ☐ Solid State
- ☐ Non Microphonic
- ☐ Flat 20Hz to 20KHz
- ☐ Broadband Output 1.0 Vrms
- ☐ Pink Filter Available

The Allison Model 655C is a miniaturized unit with uniform frequency response from 20Hz to 20KHz and usable noise spectrum from 5Hz to 500KHz. The unit requires only 22 Vdc ±20% and mounts with 2 — 6-32 screws into molded in tapped inserts. The output is approximately .3 Vrms when limited to the flat portion of the spectrum. The Model 663 produces an equal energy per octave (Pink) spectrum. This filter is packaged in the same configuration as the 655C.

PRICES — FOB FACTORY

Model 655C
1-9 $65.00; 10-24 $55.00; 25-49 $48.00; 50-99 $45.00; 100 & up $42.00

Model 663
1-9 $28.00; 10-24 $24.00; 25-49 $20.00; 50-99 $19.00; 100 & up $18.00

MODEL 660A PREAMPLIFIER

- ☐ Low Noise
- ☐ All Silicon
- ☐ Wide Bandwidth
- ☐ Adjustable Gain

The Allison 660A Preamplifier module is an a silicon, instrument quality, low noise, low disto tion unit having an open feedback loop for adjus ment of gain and bandwidth.

This also provides opportunity for selective ampl fication. Frequency Response: 10Hz low end an 50KHz to 1MHz, depending on gain setting. D Supply: 13.5 to 24 Volts.

Size: 1¾″ W. x 2¼″ H. x 9/16″ D.

PRICES — FOB FACTORY

1 to 9	$19.50	25 to 49	$17.75
10 to 24	18.50	50 and up	17.00

MODEL 666 POWER SUPPLY

- ☐ Designed to Power Allison Modules
- ☐ ±1% Voltage Regulation
- ☐ 3 Millivolt Maximum Ripple
- ☐ Zener Regulation
- ☐ Solid State Rectifier
- ☐ Positive or Negative Common

Allison 666 Modular Power Supply, consisting of a Transformer module and Rectifier/Regulator module, provides 24 Vdc ±2% output voltage from 110 Vac to 130 Vac, 50-60Hz input. Two compact units provide high versatility in mounting.

Size: Transformer — 1 13/16″ x 1½″ x 1½″
Regulator — 2⅛″ x 2⅛″ x 1″

PRICES — FOB FACTORY

666P (Positive Common) or 666N (Negative Common)
1-9 $29.50; 10-24 $25.00; over 24 $23.00

MODELS 658A and 659A AMPLIFIERS

- ☐ Low Noise
- ☐ Wide Bandwidth
- ☐ All Silicon
- ☐ Low Output Impedance
- ☐ Adjustable Gain

Capable of 6.0 volts into 600 ohms, these instrument quality an plifiers are furnished for either Class A (658A) or Class B (659A operation. Socket mounted all silicon transisters facilitate service An open feedback loop provides for adjustment of gain and band width, with gain variable from 25 to 50 db.

Frequency Response: 10Hz low end to approximately 500KHz, de pending on gain. Input Impedance: 40K ohms. Output Impedance approximately 2 ohms. DC Supply: 22.5 Vdc at 10 ma required Size: 1¾″ W. x 2¼″ H. x 9/16″ D.

PRICES — FOB FACTORY

1 to 9	$27.50	25 to 49	$23.00
10 to 24	25.00	50 and up	21.50

OPERATIONAL AMPLIFIERS FROM ANALOG DEVICES, INC.

Analog Devices line of operational amplifiers is specifically designed to excel in a wide spectrum of applications. Our standard product line is conceived and engineered with the specific objective of *greater user value.* Check these features:

LOW DRIFT CHOPPERLESS TYPES:
0 μV/°C, Model 184L, $70 (1–9)
5 V/°C, Model 183J, $35 (1–9)

CHOPPER STABILIZED AMPLIFIERS
0 μV/°C, Model 233K, $59 (1–9)

LOW COST FET-INPUT MODELS
5 pA I_{bias}, Model 40J, $12 (1–9)

ELECTROMETERS—SOLID-STATE PARAMETRIC
femtoampere (10 x 10^{-15}A), Model 310J, $75 (1–9)

FAST-SETTLING TYPES
6 μsec to 0.01%, Model 45, $38 (1–9)

NEW PRODUCTS (POST-eem)

This catalog shows our product line as frozen in suspended animation at a particular moment in time, late winter, 1970. Space prevents detailed mention of a number of new products that will probably be available at the time you read this. They include:

- IC AMPLIFIERS IN TO-5 CANS: FET-Input, Low-Drift, Fast-Slewing, Darlington-Input, General Purpose, etc.
- MULTIPLIERS & DIVIDERS: 0.1%, Fast, IC, G.P., etc.

Please consult the factory or our nearest rep for further information.

OTHER ANALOG FUNCTION MODULES

In addition to operational amplifiers and products listed elsewhere in eem, a variety of function circuits and accessories are also available from Analog. Please inquire.

- DIFFERENTIAL VOLTAGE COMPARATORS
  high input impedance
- LOG/ANTILOG CIRCUITS
  fully temperature compensated
- INSTRUMENTATION AMPLIFIERS
  modular and IC
- OPERATIONAL MANIFOLDS
  op amp breadboards
- SOCKETS, POTENTIOMETERS, etc.

WHERE ELSE TO LOOK IN eem

Other products of Analog Devices are also catalogued in eem:

ACTIVE FILTERS	Section 2700
POWER SUPPLIES	Section 4000

PRESELECTED OPERATIONAL AMPLIFIERS

On the next two pages is a brief summary of a group of amplifiers PRE-SELECTED by our applications engineers as being the types most likely to be used in some 80% of the applications where our recommendation is called for. Specs and price are near optimum for the state of the art, and they are not easily obsoleted. Because availability is usually an important factor in making amplifier choices, we conscientiously strive to maintain these products in stock for immediate shipment in moderate quantities. Complete data and catalog information on any of these types is available from us or our representative upon request.

SEE NEXT TWO PAGES

RELATED TYPES

In addition to the Pre-Selected Operational Amplifiers, there are a number of other popular models that are, for the most part, variations of the preselected amplifiers in which certain performance parameters have been optimized. They include units having increased power output (voltage or current), battery-powered units, non-inverting chopper amplifiers, non-inverting parametric electrometers, FET-input comparators, etc.

FREE SELECTION GUIDE

Available upon request, this compact six-page catalog lists the Preselected Amplifiers and related types, as well as information on compact modular low-cost power supplies for op amps, function modules, and logic circuits. Copies of our 1969 *Selection Handbook and Catalog Guide* are also still available.

OTHER SERVICES

Analog Devices is people as well as products. Here are some of the services that we provide routinely because we view service to customers as being good business:

- **DATA SHEETS, CATALOGS, APPLICATIONS NOTES, ANALOG DIALOGUE**
- **EVALUATION SAMPLES** on loan with no obligation to buy
- **APPLICATIONS ENGINEERING** at all levels, from field to factory
- **SPECIALS:** We have produced many items that are not listed in our catalog to special order. "What you don't see, ask for."

Preselected Operational Amplifiers

The operational amplifiers featured in this short form catalog have been preselected by our applications engineering staff because, ultimately one or more of these products are recommended and used in about 85% of the applications problems solved annually by our applications engineers. Each is a proven product . . . value engineered to provide maximum performance per dollar available from today's op amp technology. In general, if an amplifier can be chosen from this "preselected" group the designer may specify it with the confidence that he is using a device that will not be easily obsoleted.

Another important factor in amplifier selection is prompt and reliable delivery. For this reason, Analog Devices has made a commitment to the maintenance of substantial stock l each of these preselected products. Orders are pr promptly and in nearly all cases quantities up to 24 pie be shipped immediately. It should also be realized that Devices manufactures over 100 models of operationa fiers, many types of function modules, and a broad modular power supplies, as well as A/D and D/A con

Three comprehensive catalogs are available which list specifications. We will be happy to send them to you charge upon request.

Operational Amplifiers with Matchless Performance

If settling time is important, specify FS-125

The Model FS-125 is designed for fast settling **(maximum 80 ns to 0.1% final value)** on step function signals but does not sacrifice low drift operation. It can be calibrated with dc and remain within 0.1% up to 12 MHz. This makes it an ideal choice for sample-and-holds, A/D's, D/A's, comparators, and similar "time domain" applications.

If gain bandwidth is important, specify OA-125

The Model OA-125 has a 6 dB/octave roll-off which gives it the widest bandwidth of any unconditionally stable amplifier available. **No compensating networks are required.** This makes it an ideal choice for active filters, video amplifiers, and similar "frequency domain" applications.

	FS-125	OA-125	
INPUT: Single ended	√	√	
VOLTAGE GAIN (Open loop)	100,000	100,000

***DISTRIBUTED AMPLIFIERS**

The distributed amplifier is an effective means of paralleling state-of-the-art solid-state and tube devices to obtain very high output powers. C-COR has been designing and manufacturing this type of device since 1953, and now offers a complete line ranging from 50 watt vacuum tube models to 5 watt solid-state units, most of which are listed in the tables.
New designs are coming out of our laboratory on a regular basis. Contact us for the most difficult requirements regarding power and bandpass. Some of our amplifiers are being used by NASA at Cape Kennedy in many critical applications.

Pkg. 1B

The 1012 Series is useful as a broadband power amplifier or a high level pulse amplifier.
The frequency range 1 kHz to 185 MHz and power output to 20 Watts — provide great versatility in linear amplification. Amplifiers in this group can be supplied with solid state preamps to provide any gain requirement.

The illustration shows M el 1029 integrated into a com x amplifying system, designed d built for NASA, which del rs in excess of 20 watts of li ar power. Available in se al bandpass configurations, M el 1029 is capable of supplyin p to 50 watts of power. is adaptable for operation at l er powers on the order of 5 v ts with intermod products o 0 dB. Many special requirem ts can be met, including EI shielding.

Pkg. 3A

The 3230 Series is a line of bandpass power amplifiers capable of delivering up to 4 Watts Class A linear power. Bandpass characteristics are sufficiently broad to provide excellent versatility in processing CW signals as well as excellent pulse response. These units are normally supplied at center frequencies specified by the customer. Some variation in bandwidth, in gain and power can be supplied on special order.

ALSO AVAILABLE - - -
Solid State Amplifiers similar to 3230 Series
- CLASS A power up to 10
- CLASS B or C up to 100

NOTES:

(1) Output capability Test Spec. is test limit for given percent distortion. If % not given, limit is at 1 dB gain compression.

PACKAGE CODE:

The first digit in a model number indicates the basic configuration.

1. Rack mounting
2. Weatherproof
3. Modular (requiring DC power)
4. Instrument case

The package code letter designates the style of the package. Photos in this catalog show a few of the standard package styles. Many units are available in several style packages.

Pkg. 3

* The Model 2202 solid-state UHF preamplifier provides the ultimate in low-noise performance in an economical package suitable for outdoor mounting. This amplifier is ideally suited for any communication requirement where low-level signals must be amplified. The PS-25 dc power supply is a companion unit which is housed in an identical package.

**Model 3201 is available in any center frequency from 100 MH to 650 MHz with a noise figure of from 2 dB to 5 dB, dependir on frequency and other specs. The module is housed in a rugge aluminum extrusion which features accessibility for repair ar tuning. Similar to 2202, except Pkg. Other circuit designs ava able in Min-Econ packaging.

LABORATORY C-COR AMPLIFIERS

GENERAL PURPOSE WIDEBAND AND FAST PULSE AMPLIFIERS
INTEGRAL POWER SUPPLIES, SPECIAL FEATURES—VERSATILE LABORATORY INSTRUMENTS

Pkg. 4B

The Model 4013-S is a general purpose laboratory instrument providing ½ watt of linear power from 1 MHz to 425 MHz.

The amplifier includes an internal electronic gain control circuit which provides convenient automatic levelling with CW and sweep input signals. A manual gain vernier control and a step attenuator are also provided to increase the versatility of this instrument.

The Model 4013-P is an extremely versatile laboratory instrument with a 1.3 ns rise time and an output of ±6V into 50 ohms.

Pkg. 4A

The Model 4375-S is designed for laboratory and systems use. It combines high output and wide bandwidth in an all solid-state unit. C-COR's unique solid-state distributed amplifier circuitry is used in the output stage to provide high output capability. A gain of 20, 40, and 60 dB is available in switched steps (by use of a step attenuator) with a vernier control of 0 to 6 dB for each step. The 4375-S is calibrated for flat response to serve as a general purpose sine wave amplifier or preamplifier. The 4375-P is calibrated for use as a fast rise time pulse amplifier.

The Model 4376 is a compact economical broadband amplifier with wide application in any laboratory. It features bandpass 10 Hz - 200 MHz, high input impedance and overload protection.

Pkg. 4D

NEW PRODUCTS

- dc - 500 MHz low noise, wide dynamic range
- Wideband non-linear video signal processors for log and square-root.
- Solid state high voltage for capacitive load. Output to 250 Vp-p for video display and electro-optics.

In addition, C-COR offers systems and specialized test equipment.

The illustrated Model TSI-20 is a complete signal generation and measuring unit designed specifically for measuring cross modulation in wideband amplifiers (50 - 250 MHz) operating under normal load conditions.

The test method is to load each amplifier with the desired signals each 100% modulated except for the signal channel to be measured. Percent cross mod (or dB down from 100%) as induced by the amplifier on the unmodulated channel is measured by selective voltmeter wave analyses calibrated to known percentage modulation.

Model TSI-20

Above listings are some of the new products in process at the time of publication.

Also see other functional listings for added data and new products.

AUXILIARY EQUIPMENT

Model	Description	Specifications
3692-A	high impedance probe preamplifier	10 Hz-200 MHz @ 3 dB nom. passband, unity voltage gain. 3692-AB available aligned for pulse use 2 ns rise time.
3693-A	high impedance, probe amplifier	10 kHz-400 MHz @ 3 db nom. passband, unity voltage gain. Model 3693-AB available for pulse use.
4622	battery powered preamplifier with rechargeable battery	10 Hz-60 MHz @ 3 dB nom. passband, 20 dB gain @ 75 Ω. Use PS-22 charger for AC or battery operation.
-760	matching transformer	50-75 Ω, 100 kHz-220 MHz passband
T-1	matching transformer	50-75 Ω, 1 MHz-425 MHz passband
T-2	matching transformer	50-200 Ω, 100 kHz-400 MHz passband
S-22	battery charger and power supply	for Model 4622 preamplifier
S-22B	power supply for Min-Econ amplifiers	voltage range: 6 Vdc to 36 Vdc; current range: 30 mA to 90 mA
GR	crystal controlled VHF signal source	solid state. Filtered output at specified frequency from 50 MHz-250 MHz.

DATA DEVICES from DDC

SIGNAL CONDITIONING MODULES

WIDEBAND AMPLIFIERS:
- Slewing rates to 1,000 V/μs
- Gain-bandwidth products to 150 MHz
- Settling times to 60 ns (0.1%)
- Outputs to 100 mA at $\pm$10 V
- Models available for differential as well as inverting applications
- Short circuit protected versions available

FET INPUT AMPLIFIERS:
- Common Mode Voltage ratings to 10 V
- Common Mode Rejection Ratios to 106 dB
- Outputs to 20 mA at $\pm$10 V
- Voltage drifts as low as 2 μV/°C
- Hermetically sealed hybrid units operate over complete MIL temperature range

BIPOLAR AMPLIFIERS:
- Common Mode Rejection Ratios to 106 dB
- Gain-bandwidth products to 20 MHz
- Current outputs to $\pm$20 mA
- Voltage outputs to $\pm$ 20V
- Voltage drifts as low as 1.5 μV/°C

HIGH POWER AMPLIFIERS:
A wide range of output currents and voltages, including 250 mA at $\pm$14 V peak. Ideal for driving synchro loads, and in other applications requiring high power and small size.

POWER SUPPLIES & OTHER MODULES:
Single, dual, and multi-output power supplies can be furnished to satisfy most requirements. Encapsulated modules, card mounted models, and other form factors are available. Standard models include units meeting MIL temperature and other environmental requirements.
Also Logarithmic elements, and Pico-Power Comparators. PLEASE SEE SECTION 2000 FOR DATA CONVERSION MODULES.

DIFFERENTIAL D.C. AMPLIFIERS AND SIGNAL CONDITIONERS

MODEL A614

DIGITAL SYSTEMS

MODEL A614

Gains of 10 to 2500, 10V output.
No thermal breathing, low I/F noise.
No transient with temp. shift.
.5V/°C including 500Ω source.
High reliability, no adjustment.
Multipole filter, 175V common mode.

MODEL A414

AIRBORNE

MODEL A414

Rocket testing, helicopters, aircraft.
Up to 1,000 G shock, 100 G vibration.
−50° to +125°C avail.,100% humidity.
Same stability as A614. Gains to 1,000.
120db common mode rejection.
Integral bridge excitation supply avail.

MODEL 3300A

GENERAL LABORATORY

3,000 SERIES

Wide bandwidth. High input R.
Integral 115V power supply.
Choice of 12 or 300V common mode.
Excellent linearity and stability.
Full 10V, 100ma output.
Bench and rack mount accessories.

LOW $

CUSTOM O.E.M. AMPLIFIERS

OEM PRODUCTS

Custom packaging at low prices.
Includes customer name and logo.
Full warranty and/or training.
Reproducible manual and drawings.
Applications engineering.

MODEL A418

MOBILE

MODEL A418

Same rugged performance as A414.
Full range panel adjustments.
Ultra-stable RTI zero suppression.
12, 24, 28VDC or 115VAC operation.
Systems with Meter Monitors avail.
Signal conditioning options avail.

STRAIN GAGE
(Options available)

olated bridge excitation.
ridge completion networks.
w. or relay calib. check.
w. or relay zero check.
alance or zero suppression.

THERMOCOUPLE
(Options available)

Most common junction types.
Integral reference junction.
Linearization & special filters.
Stable zero suppression.
Low noise gains to 100,000.

SPECIAL APPLICATIONS

Any classic or special filter.
Use with unique pwr lines.
Multiple isolated inputs.
Computer readout of controls.
Many other custom features.

ASK FOR ILLUSTRATED TECHNICAL BULLETIN "NOISE IN DATA AMPLIFIERS"

Ectron CORPORATION

BROADBAND POWER AMPLIFIERS

(no tuning, no plug-in's, no bandswitching)

BANDPASS.....10 kHz to 220 M

POWER OUTPUT.....up to 400 watts continuo

POWER GAIN.....up to 64

The M404A shown at left is the most powerful and most versatile broadband amplifier on the market. Standard unit produces 200 to 400 watts continuous power output with minimum of 50-db power gain from 200 kHz to 220 MHz.

The M5000L is a low-cost broadband power amplifier capable of 5 to 10 watts continuous output with 30-db gain from 10 kHz to 220 MHz.

Quality Line of

intronics Analog Components

MULTIPLIER/DIVIDERS

PRECISION

The 300 Series Multiplier/Dividers are plug height-width types featuring accuracy to 0.02% and temperature stability of 50 μV/°C. All models available in MIL spec versions. Prices start at $25.

ECONOMY

Moderate specifications at op amp prices highlight the 400 Series. Accuracy is adjustable to better than 1.0% with stability of 0.03%/°C. Prices begin at $18 in quantity. MIL spec versions available.

WIDEBAND

The 500 Series Multiplier/Dividers are variable transconductance types having frequency response up to 10 MHz, better than 1% accuracy, and 0.02%/°C temperature stability. MIL spec versions available. Prices begin at $125.

GENERAL PURPOSE

The 600 Series transconductance type Multiplier/Dividers offer the best value for dollar available anywhere. They feature small signal response to 1 MHz, 0.5% accuracy, and 0.02%/°C temperature stability. MIL spec versions available. Prices begin at $75.

OPERATIONAL AMPLIFIERS

VERY FAST

Specifically designed for wideband applications, these units reproduce a higher speed signal than any other op amp. They feature 1000 V/μs slew rate, 100 MHz gain bandwidth, and down to 60 ns, 0.1% settling time. Packaged in rugged modules, they are the ideal choice in A-D and D-A conversion, in video summing applications, as high speed integrators, and in deflection control amplifiers. All models available in MIL spec versions. Prices start at $105.

FET INSTRUMENTATION

A new line of FET differential input, high performance Instrumentation Amplifiers features low cost with gains of 1 to 1000 selected by a single resistor. These economical encapsulated modules are the unequalled choice for all instrumentation applications. Prices begin at $45.

SAMPLE-HOLD MODULES

A line of encapsulated units featuring acquisition times to 1 μs, accuracy to 0.01%, voltage decay rates to 2 millivolts per minute, and an economy version under $50.

DC POWER SUPPLIES

Intronics offers a full line of modular, regulated, dual output power supplies for your analog instrumentation needs. Featured is a $\pm$15 Vdc, 25 mA unit at $18. Other units are available at $\pm$12, 15, 18, and 24 Vdc at 60, 75, and 100 mA, with 0.05% regulation. All are economical, short circuit protected, encapsulated modules. Standard units operate from 115 Vac, 50 to 400 Hz input. Also available in modular form is a 5 V, 1 A unit for logic applications and a $\pm$15 V, 200 mA model for general purpose applications. All 5 V units come with optional overvoltage crowbar protection.

VECTOR MODULE

The Model VM101 Vector Module, housed in an 0.4" high package, features 1 MHz bandwidth, 1% accuracy, and low cost — $95. Operating at −25°C to +85°C, this high performance unit computes:

- $\sqrt{X^2 + Y^2}$ based on two inputs
- The average of $\sqrt{X^2 + Y^2}$
- The average of either/both inputs

Model VM101 is ideally suited for rectangular-polar conversion in CRT displays, provides intensity correction for CRT character displays, and can be used as a high speed rectifier.

Full MIL temperature range version available.

Intronics produces a broad range of high quality, analog components — both off-the-shelf and custom designed. Pioneers in multipliers, Intronics has become a leading supplier of a variety of advanced design analog modules. Contact our applications engineering dept. to discuss your requirements.

THE FIRST IN PERFORMANCE: INTECH PROPRIETARY PRODUCTS

Intech modular products outperform the performers. Using creative circuit technology, today's top performing components, and a firm below-the-market standard price, Intech has designed the best proprietary modular products for your application.
We believe that this capability-in-a-package will more than meet your performance and price needs. But a test is worth a thousand words.
Quantity discounts are available and all Intech modular products are right from factory or distributor stock.

For more information on any of these proprietary products, contact your local Intech representative, or write directly.

ALTERNATE SOURCE FOR MODULAR PRODUCTS

Intech Modular Products Alternate Source Guide

We believe the market needs one.

That's why we're publishing ours. A review of this Alternate Source Guide will prove our capabilities as your first source in the modular product line.

We're interested in supplying you alternate source units at prices lower than the competition, yet with guaranteed quality. We can assure you this because our designs are up to date and take full advantage of the improvements in component performance and prices.

For more information on specifications and prices of any unit, contact your local Intech representative, or write us directly. In the meantime, file this guide.

ITHACO

INSTRUMENTATION for DYNAMIC DATA ACQUISITION & SIGNAL CONDITION

450 SERIES AMPLIFIERS

MODEL 450S2 PORTABLE CASE

MODELS 143/144 PREAMPLIFIERS

MODEL 241 DYNAMIC STRAIN GAGE AM

ITHACO dynamic data acquisition amplifiers and preamplifiers generally operate in the 1 Hz to 200 KHz range, and are used in a wide variety of applications requiring:

- Shaping of frequency and phase response
- Voltage or change inputs; single-ended or differential
- State-of-the-art noise performance at any impedance level
- Fully automatic (ITHACO's AUTO-GAIN® Amplifiers) computer oriented, data acquisition systems
- All products provide stable and precise gain; as low as −20 db an as 100 db

ITHACO manufactures high and low impedance, single-ended or dif voltage or charge preamplifiers in various packages. The 250, 450 Series are general purpose amplifiers for dynamic data, available choice of electrical configurations — including single-ended or di front ends. Model 241 is specifically designed for acquisition of strain data over a 60 KHz bandwidth.

FULLY AUTOMATIC DYNAMIC DATA ACQUISITION AND RECOVERY SYSTEMS

MODEL 541
AMPLIFIER STATUS MULTIPLEXER-DEMULTIPLEXER

AUTOMATIC GAIN RANGING, 32 CHANNEL STATUS RECOVERY

ITHACO's fully automatic data acquisition and recovery systems condition wide-dynamic range signals to amplitudes suitable for recording processing and display. They prevent loss of costly data due to operator error and manual response time. Model 441 Amplifiers automatically condition the amplitude of signals in the range of 1 Hz to 100 KHz to a level within the limited dynamic range of the tape recorder (or A/D converter, real-time analyzer, etc.). Gain is automatically switched in the precise steps as required to hold output signal amplitude in the range 0.2 to 1.0 volts. The Model 541 multiplexes the amplifier status signals and supplies the data processing equipment with amplifier status for each data channel.

MODEL 441 AUTO-GAIN® AMP

MODEL 353

PHASE-LOCK (Lock-in) AMPLIFIER

Model 353 Phase-Lock Amplifier measures amplitude and phase of repetitive signals in the presence noise levels. The 353 design represents a significant departure from that of conventional lock-in an Synchronization with an external reference signal is substantially automatic, and the instrument w this reference signal over a 10:1 frequency range without affecting accuracy of phase calibration time is minimum and no frequency tuning is required. The instrument will accommodate peak coherent signals or noise of 1,000 times the full scale signal setting without saturating. Mo construction, the 353 can be adapted to a wide variety of specialized applications. Standard se of 1 microvolt can be increased to 10 nanovolts with remote preamplifiers in the 1 Hz to 2 frequency range.

A new plug-in, Model 3151, provides a true logarithmic output for 10,000:1 input signal ran available are ratio, phase angle, in-phase/quadrature outputs, etc. For multichannel applications, Mo provides up to 7 synchronous demodulation channels in a single 19″ standard rack adapter.

WIDEBAND, OMNIDIRECTIONAL, SENSITIVE HYDROPHONE

MODEL 601-1

30 Hz TO 150 KHz RESPONSE, INTERNAL 20 db PREAMPLIFIERS

Model 601-1 is a sensitive, wideband, omnidirectional hydrophone incorporating a low noise ITHACO preamplifier within its molded structure to provide optimum noise performance. Midband sensitivity is −69 dbv/μbar at preamplifier output (−89 db at amplifier input). Frequency response is ±3 db from 30 Hz to 100 KHz with usable response to 150 KHz. Spectral noise, 1.0 Hz bandwidth, at preamplifier output is less than Sea State Zero at frequencies below 10 KHz.

VOLTAGE CONTROLLED AMPLIFIER

Some salient features of Model 3151 voltage controlled amplifier are the following: a true logarithmic gain control characteristic with negligible coupling between the control input and the signal output, gain range of up to 80 db, gain control accuracy of ±0.5 db, gain slewing rate of over a million db per second, and bandwidth of more than 200 KHz. This unit is directly applicable to systems with computer-programmed gain. The addition of a feedback loop (detector and integrator) permits logarithmic conversion, signal compression, and automatic gain control. This model is a plug-in amplifier which mounts in either a rack adapter or portable carrying case and is powered by a plug-in power supply.

MODE 3151

MODEL 1541

ULTRA-LOW NOISE SEISMIC AMPLIFIER

Low Frequency Preamplifier
Free of 1/f Effects

Model 1541 has a .001 Hz to 100 Hz basic frequency range. High/low pass plug-in filters are available at up to 24 db/octave rolloff. Gain is 60-100 db, externally adjustable.

CHARGE AMPLIFIER

Model 461 is an improved charge amplifier for use with piezoelectric accelerometers. The use of a demountable charge preamplifier provides for optimum noise performance over a 1 Hz to 100 KHz bandwidth with no transients induced by range switching.

Front panel controls consist of a 10-turn dial calibrated by 2 ranges of transducer sensitivity, 1-11 pc/g and 10-110 pc/g and a range switch covering a .03 to 3000g, psi, lb fullscale. Meter, galvo driver and servo output are optional.

Model 460P1 Power Supply-Calibration Generator when operating with Model 460S1 Rack Adapter (7 channels) or Model 460S2 Portable Case (3 channels) form a calibration system for the 461 Charge Amplifier.

MODEL 461
CHARGE AMPLIFI

MELCOR OPERATIONAL AMPLIFIERS

These versatile solid state modules are used in a wide range of applications for control instrumentation, computation, test equipment, medical instruments, data logging, etc. Melcor has developed and produced in large quantities, one of the broadest and most up-to-date product lines in the industry. These are available for OFF-THE-SHELF delivery. In addition, Melcor manufactures many customized modules to industry specifications.

MELCOR AUDIO AMPLIFIERS

A complete line of Microphone Preamplifiers, Mixers, Line Amplifiers, Equalizers, Compressors, Monitor Amplifiers, Channel Select Switching for Custom Audio Consoles. Modules feature ultra low noise and distortion, flat frequency response, output power to 16 watts on plug-in PC cards. Rack mounted power amplifiers to 100 watts output. Line Transformers, Power Supplies, Rack Mounting Frame and numerous accessory items available.

Dynamics Instrumentation

DIFFERENTIAL DC AMPLIFIERS

AUTOMATIC/PROGRAMMABLE DIFFERENTIAL DC AMPLIFIER Model 7511

Dynamics Model 7511 Differential DC Amplifiers provide a choice of either fully automatic or remotely programmable gain switching. Solid state switches are used for gain changing to achieve high speed and reliability. The amplifier input circuitry is a symmetrical, true differential configuration that may be connected for either inverting or noninverting gain polarity. Front panel lights are used to indicate gain settings. Several design options are available for application flexibility. Key features are 50 μSec. Switching. Completely automatic or programmable. Three gain options. Dual outputs. Filtered dual outputs. Multiplex outputs. Interrogate gain feature. Gain lock feature. 50 μSec. overload recovery.

General Purpose DIFFERENTIAL DC AMPLIFIER Model 7520

Dynamics Model 7520 Differential DC Amplifiers are designed to satisfy a broad range of operating requirements. Two standard models accommodate fourteen options to offer system designers the widest selection of operating parameters possible: Three Gain Step Sequences, Accuracy to ±0.01%, Single, dual outputs and Dual Isolated Outputs (±100 mA), Five and Seven-position Band Limiting Filters, Fixed or Variable Current Limiting and offset control. All controls are front panel mounted. Both models permit mounting of 10 channels in standard 19-inch RETMA rack mounts.
Advanced Feedback design rejects connom-mode signals and provides excellent input-to-output isolation. Input circuit allows for inverting or noninverting gain polarity.
Key Features include: Fast overload recovery, Gain accuracies to 0.01%, Self-contained power supply, Low noise, Output short circuit protected, Several design options.

Line Isolation Driver DIFFERENTIAL DC AMPLIFIER Model 7504

The Model 7504 offers: DC to 100 kHz, Gains from 0.1 to 33, Source Impedance — 100 k-ohms, Output — 10 V, 100 mA. FET input circuit eliminates zero errors from pump-out current flowing in signal source. Tolerates floating sources, long input cables. Typical applications include buffering single-ended amplifiers for ground isolation, driving galvanometers, long lines, and tape recorder preamplification. Gain accuracy; ±0.1%. Size 5¼" H.

High Performance DIFFERENTIAL DC AMPLIFIER 7514 Series

Dynamics Model 7514 Differential DC Amplifiers are designed to satisfy a broad range of operating requirements. Two standard models accommodate eighteen options to offer system designers the widest selection of operating parameters possible: Six Gain Step Sequences, Accuracy to ±0.01.%, Single and Dual Outputs (±100 mA), Five and Seven-position Wideband Filters, and Fixed or Variable Current Limiting settings. All controls are front-panel mounted. Both models permit mounting of 10 channels in standard 19-inch RETMA rack mounts.
Advanced Feedback design rejects common-mode signals and provides excellent input-to-output isolation. Input circuit allows for inverting or noninverting gain polarity. Low pump-out current is maintained over a wide temperature range permitting low drift operation.

Extremely Wide-bandwidth DIFFERENTIAL DC AMPLIFIER Model 7575 Series

The Dynamics 7575 Series is a family of 1 megacycle differential dc amplifiers capable of operation in the presence of 100 volts (p-p) of common-mode signal. A slewing rate of 50 volts per microsecond and a full scale output of ±10 volts, ±100 milliamperes at all gain settings are standard for all models. These wide-band instrumentation amplifiers meet the frequency response specification (1 Mc) when operating into a resistive load of 50 ohms or greater. Common-mode rejection ratio is 120 db at 60 cps with a 5000 ohm unbalance. A wide variety of option combinations are available in standard models.
The series has a wide range of applications including: Wide-band links; Low-level commutation; Applied research in turbulence, blast or shock studies; Direct reference recording; Tape recorder preamplification.

Small Size DIFFERENTIAL DC AMPLIFIER Model 7830

Dynamics Model 7830 is a small, chopperless, solid-state, instrumentation differential dc amplifier. Multiple feedback techniques are used to reject common-mode signals and provide input to output isolation. The input circuitry may be connected for either inverting or noninverting gain polarity. Standard power is ±20 VDC or by appropriate option selection it can be operated from ±28 VDC or 115 VAC; 400 Hz. A mating series of active electronic filters are available (Model 7831). For multiple usage, rack adaptors with common power supplies are available. Key features include: Small, rugged construction, Meets MIL-E-5400, Fast overload recovery, Gains 10 to 1000, Mating active electronic filters, ±20 VDC, 28 VDC, 115 V — 60 Hz and 400 Hz, 50 Channel Rack Adaptors.

Flux-Coupled DIFFERENTIAL DC AMPLIFIER Model 7530

Dynamics Model 7530 Differential DC Amplifiers are designed to satisfy a broad range of operating requirements. Options include three Gain Steps Sequences, Accuracy to ±0.01%, Single Dual Outputs, Five and Seven-position Band Limiting Filters, Fixed or Variable Current Limiting, and Offset Control. All controls are front panel mounted. Ten amplifiers are housed in standard 19-in. RETMA rack mounts. Advanced flux-coupled design rejects common mode signals up to ±300 VDC and provides excellent input to output isolation.
Some of the features are: ±300 VDC common-mode level; Fast overload recovery; Wide bandwidth; Low noise; Output short circuit protected; Several design options.

DC AMPLIFIERS

Galvanometer Driver DC AMPLIFIER Model 7202

The Dynamics Model 7202 is a solid state, single-ended dc amplifier. With 100 milliampere output current, variable offset, current limiting and filtering capability, it is ideally suited for driving galvanometers. Ten amplifiers mount in a standard 19" RETMA rack cabinet.
Features included are: Output reversal switch, Offset and current limiting. Selectable output "Tee" pads.

CHARGE AMPLIFIERS

AUTOMATIC CHARGE AMPLIFIER Model 7306/PD

The Dynamics Model 7306/PD AC Charge Amplifier is an all solid-state, wideband instrument suitable for use with piezoelectric transducers. Individual internal power supplies provide maximum isolation and flexibility in multi-channel systems. Ample feedback is used to achieve stability, low distortion and long-term reliability.
The Model 7306/PD features a fully automatic range switching circuit which covers a 1.0 to 1000 (g) full-scale range in seven, 10 dB steps. Upranging is dependent upon the peak value of input signal and the circuit will start to up-range 1.0 μSec. after a preset trip level has been exceeded. The amplifier will settle on the most optimum range within 1.0 millisecond. A recessed front panel control varies the trip level from 1.0 to 5.0 volts, relative to full-scale output.
Features include: Solid-state — FET circuit, Remote and/or local series-shunt calibration, Automatic range switching.

ed CHARGE AMPLIFIER
7306

hics' Charge Amplifier, Model Series are all solid-state wide- instruments especially suitable se with piezoelectric transducers. dual internal power supplies pro- maximum isolation and flexibility lti-channel systems. Ample feed- is used to achieve stability, low tion, and long term reliability. asic charge amplifier incorporates put/output isolation feature that ates ground loops when con- d to a grounded transducer. basic amplifier plus one range h will provide a fully operational e amplifier with one output, suit- for driving a tape recorder, oscil- pe or other low current load. basic amplifier also includes the amics Range Master Control" h provides a positive read-out of full scale and transducer sensitiv- values, thus eliminating reading guities.

TRIPLE MODE AMPLIFIER

ersal
ATION DC AND CHARGE AMPLIFIER
el 7350

amics Model 7350 Universal Data lifier incorporates in one package provisions necessary to process low analog signals from all types of and dc transducers. the DC MODE, performance is that a high quality differential dc ampli- . Low drift and noise together with 0 volt common-mode operating level es the Model 7350 particularly ful for processing low level signals n strain gauge and thermocouple rces. CHARGE MODE permits operation h all types of piezoelectric trans- ers. Input-output isolation elimi- ed ground loop problems normally ountered with grounded transducers multi-channel systems. h of the range switch options in- des a range switch and a ten-turn nting dial. The range switch in- ates input units per volt of output. ten-turn counting dial reads di- tly in pC/g in the charge amplifier erating mode and is used to dial-in transducer sensitivity value to match transducer being used. A total span 1 to 100 pC/g is covered in two nges (1-10) and (10 to 100). The unting dial is accurate to within 1.0% of reading. In the dc operating de, the counting dial is used as a riable gain control to obtain sen- tivity values between the fixed steps.

ACTIVE ELECTRONIC FILTERS

ROGRAMMABLE FILTER
odel 7812

ynamics Model 7812 is a third-order ilter with programmable cut-off fre- uencies. A 3-bit binary input is used o select eight individual cutoff requencies.

Balanced differential input circuitry is used to provide input-output isolation and permit operation with either inverting or noninverting gain polarity.
Other features include: Solid State Switching, less than 10μs between any two cutoff frequencies. Differential Input Terminals, Self-contained Power Supply. Output Protected, $\pm$10 V at $\pm$10 mA. Output may be shorted without damage. 8 Cutoff frequencies available.

Solid-state Active
ELECTRONIC FILTERS
Models 6364/6371

Dynamics Models 6364 and 6371 series of Electronic Filters are variable, direct-coupled active filters with Butterworth and Linear Phase characteristics. Terminal slope on each skirt is 36 dB per octave. Cut-off frequencies can be selected over four decades in 0.1 decade steps. Model 6371 is a low-pass instrument only. Model 6364 has both low and high-pass circuits with switching provisions providing bandpass and band reject capabilities as well. Low-pass or high-pass filtering can be independently switched out.
Both Models, 6364 and 6371, are available in two frequency ranges: Low frequency units cover four decades from 1 Hz to 1 MHz. Versatile packaging enables these filters to be mounted in single, dual or eight-channel rackmount configurations. A portable benchmount is also available.

Small Size
ACTIVE ELECTRONIC FILTERS
Models 7831/7850 Series

These series of Active Electronic Filters are both low-pass direct-coupled filters with Butterworth Bessel (Linear Phase) or Chebyshev characteristics.
Two sizes in the Model 7850 series accommodate cutoff frequencies of 1 Hz to 50 Hz or 51 Hz to 50 KHz in either the 4th or 6th order. (24dB/octave or 36dB/octave terminal slope). The 7831 series cutoff frequencies are 1 Hz to 50 KHz in either the 4th or 6th order. If preamplification is required for this series (Model 7831), mating model 7830 Differential DC Amplifier is available.

BRIDGE POWER SUPPLIES

BRIDGE POWER SUPPLY
Model 7827

The Dynamics Model 7827 Bridge Power Supply is an isolated, regulated instrument especially suited for the exciting strain-gauge transducers.
A solid-state regulator provides continuously variable output from 1 to 16 volts and will deliver up to 150 milliamperes of direct current to the bridge. Constant current and remote calibration are available as options. Controls for shunt calibration, bridge monitoring, and balancing are provided on the front panel. The Bridge supply accommodates 2 to 8 wire strain-gauge systems.

MISCELLANEOUS INSTRUMENTS

GALVANOMETER CONDITIONING UNIT
Models 301/303

The Dynamics Model 301 is a 12 channel rack mounted Galvanometer Conditioning Unit which provides variable signal level attenuation and matching between a wide range of signal sources and oscilligraph galvanometers.
Galvanometers ranging from low frequency-high sensitivity to high frequency-low sensitivity types are accommodated. Each of the channels have an 11-position sensitivity control with multi-turn trimming potentiometers, damping resistor selector, galvanometer reversing switch and disconnect switch. Model 303 is a 6-channel configuration and is equal in respects as the model 301.

DIGITAL ISOLATION SWITCH
Models 601/602

The Model 601 Digital Isolation Switch is an isolating digital circuit with 500 nanosecond response, capable of transmitting dc logic levels.
Eight models provide all combinations of inversion, translation and bipolar operation. The dimensions, 0.4" x 1⅛"-x 1½" make it suitable for mounting on PC cards. Proper operation requires that power be supplied separately on both input and output sides.
The Model 602 High Speed Digital Isolation Switch, provides an isolating interface for digital logic signals with 100 nanosecond response. Input-to-Output isolation prevents signal contamination in interface processes by eliminating ground loops. Input has variable threshold Schmitt trigger characteristics. Output is fully floating-power is carrier derived from the input side and is sufficient to provide a dc to 3 MHz response.

PORTABLE/LINE MULTIMETERS
Models 503/504

The Model 503, dc Microvolt-Ammeter operates from line or automatically recharged, internal power source. The unit provides fifteen ranges from: $\pm$100 μV to $\pm$1 kV $\pm$100 nA to $\pm$1.0 A.
The Model 504, dc Micromultimeter provides eighteen ranges from: $\pm$100 μV to $\pm$1 kV, $\pm$100 nA to $\pm$1.0 A, 10 ohms to 100 megohms.

GAIN BRIDGE
Model 520

The Model 520 is a solid state Gain Bridge that provides an inexpensive means of calibrating all types of dc and charge amplifiers.
Ease of operation and calibration make for an extremely versatile instrument. The Dynamic gain null method is used to calibrate gains thus eliminating all dc zero errors. Accuracy to $\pm$0.01%.

DC DATA AMPLIFIERS

series 60 & 70

- 10 amplifiers in 3½" panel height
- Up to 4 poles active filtering
- Switchable bandwidth
- Operate on 115V AC power
- Multiple, buffered outputs

FOR VERSATILITY IN A MULTI-PURPOSE INSTRUMENTATION SYSTEM, Series 70 amplifiers come with your selection of features and controls from those ally available: output multiplexer switch, input calibration switch, osc calibrator and scaling controls, oscillograph zero suppression, switche attenuator for gains down to 1/100, convenient selector switch for calib continuously-adjustable gain, up to two post-amplifiers. For the conven Government users, Series 60 and 70 amplifiers are available on a GSA

series 50 & 55

- Low cost, small size
- 20 amplifiers in 3½" panel height
- 2-pole active filter (fixed bandwidth)
- Operate on ±25V DC power

FOR PRECISE, DIFFERENTIAL AMPLIFICATION WITH SIMPLICITY, use low-cos 50/55 amplifiers. Series 50 and 55 consist of just the high-performance plifier section extracted from Series 60 and 70 respectively. They are su economical to obviate low-level multiplexing in many applications. To your low-level subsystem, options are available for input calibration switch output mutiplexing within the 50/55 package.

highlight specifications

Newport data amplifiers measure full-scale signals as small as 10 millivolts, even in the pres extreme common-mode voltages. Typical signal sources are transducers having unbalanced im on the order of 1 kilohm. Notice particularly the high input-impedance, high common-mode r low drift and excellent linearity which the amplifiers have for this purpose. Depending on mental conditions, errors are limited to the range from 0.1% to 0.01%.

For use with low-level multiplexers, consult the factory for amplifiers capable of changing precision gains and settling to 0.01% in 100 microseconds or less.

DIFFERENTIAL INPUT	Input source may be either floating or grounded.
Impedance	No bias current return path is required. 30 Megohms
COMMON MODE	
Common-Mode Rejection at Gain = 1000, DC to 60 Hz

READBOARDS

The following pages contain photos and specifications for our line of breadboard printed circuit boards. All boards are made on 2 ounce copper clad glass epoxy FR4 (except as noted), are finished with .00002 gold over .0002 nickel, and are available from stock. When the part number contains the letters DE-1, the board conforms in size to the drawing on page 1352.

TRANSISTOR BREADBOARD

A low cost breadboard for holding up to 12 transistors and plenty of associated components. Eyelets at the connector fingers give the added reliability of parallel redundant contacts through the 22 pin edge connector. This Breadboard is available on either FR-3 or FR-4 material.

DUAL IN-LINE BREADBOARDS

The breadboards shown on these two pages are design[illegible] to hold the popular dual in-line I.C. packages; either 14 [illegible] 16 pin, and in two board types, 24 pin. The basic board pro[illegible]es etched pads with holes for mounting the I.C. package e[illegible]er directly or in a socket. In addition, each pad contains [illegible]di-tional holes for interwiring and tying in the power s[illegible]ly leads, which have been left isolated to allow for maxi[illegible]m versatility in using DIP's of various manufacture and pin [illegible]n-figuration. Except where noted otherwise, all boards are [illegible]de of glass epoxy material, plated with gold over nickel, d[illegible]ed No. 62, and have 44 contact connector tongues.

CUSTOM BOARDS ON DE-1 OUTLINE SHAPE

Douglas Electronics, Inc., has developed a standard printed circuit board outline shape to help you decrease your circuit board costs. Through the economies of this standardization we are able to offer firm standard prices provided basic design rules are followed. These prices are much lower than those offered by other manufacturers who must produce boards to custom outline shapes. All DE-1 board are blanked out on a punch press, thus assuring consistent dimensional stability, as well as fast economical production. The DE-1 boards also fit our standard line of hardware.

STANDARD DE-1 PRICING SCHEDULE

	.00002 gold over .0002 nickel 1-99	100-300	Plain copper 1-99	100-300
1 side FR-3	2.75	2.50	2.50	2.25
2 side FR-3	3.25	3.00	2.75	2.50
1 side FR-4	3.25	3.00	3.00	2.75
2 side FR-4	3.75	3.50	3.25	3.00
Plate thru FR-4	5.60	4.75		

Set-up charges	one side	two side	plate thru
1st time	25.00	35.00	35.00
Repeat	15.00	25.00	30.00

Normal shipping date on all custom circuit boards is two weeks following receipt of purchase order and artwork. For faster delivery, a 25 percent price increase on the total job will be charged.

When ordering boards from this pricing schedule, be sur[illegible] to include all necessary information to manufacture them [illegible]terial, finish, hole sizes, etc). The above prices will ap[illegible], subject to the following conditions:

1. Your artwork meets with our approval.
2. Hole count not more than 300 holes.
3. No more than three hole sizes.
4. No more than thirty eyelets to be installed.

ARTWORK MASTERS

To make layout of DE-1 size boards easier, see page 1354 [illegible] our assortment of DE-1 artwork masters.

CUSTOM BOARDS ON CUSTOM OUTLINE SHAPES

Douglas Electronics, Inc., has for many years b[illegible] manufacturing printed circuit boards with cus[illegible] outline shapes. Over the years we have acqu[illegible] equipment and experience which allows us to m[illegible]ufacture such boards in an efficient and econom[illegible] manner, and therefore allows us to pass our sav[illegible] on to our customers.

Because of the many different requirements in [illegible] area of custom printed circuit boards, we are [illegible] able to offer a standard price table, but we in[illegible] you to send us your requirements for a quota[illegible].

DOUGLAS ELECTRONICS, INC. 718 Marina Blvd., San Leandro, California 94577 • Telephone 415/483-8770

CIRCUIT BOARD RACKS FOR DE-1 OUTLINE SHAPE

unique card racks have been designed exclusively for our DE-1 outline shape printed circuit boards. The racks are made of clear anodized aluminum and are designed so that the board is held in position by rows of dimples in the rack sides. Connectors are rigidly mounted at the back of the rack and the guiding dimples designed so as to allow for alignment with connectors, yet still hold the cards in position. The result is a sturdy one piece unit which has no plastic parts and which requires no assembly.

Several variations are available to fill various customer requirements. Card center to center distances of ¾" and ½" are available and the racks are offered in a choice of three different sizes. The 19" rack is for standard rack mounting, the 19" and 11½" lengths are designed to fit our cases shown on page 10 and the 4⅝" mini rack is for chassis mounting. The height of rack bodies is 4½", the width across the flanges is 5⅛". For the 19" and 11½" racks, four different flange types are offered for various mounting situations. The R-6 is furnished only as shown.

Order specify rack number and type of mounting flange desired. If no flange is specified, we will furnish the standard front flange. Prices are for racks only and do not include the connectors. If desired, will install the connectors shown below, charging only for the price of the connectors only.

OPTICIAL MOUNTING BRACKETS

STANDARD CARD RACKS

PRINTED CIRCUIT CONNECTORS

For the convenience of one source purchasing, the connectors as described on this page are carried in stock at all times. All of our breadboards and custom boards are made to fit them and they can be installed in the card racks shown on this page. All that is required for ordering purposes is the part number.

CONNECTOR PRICES

	1-49	50-99	100-249	250 & up
22	2.82	2.41	2.08	1.75

CARD RACK & INSTRUMENT CASES

Front View

Rear View

Our card rack and instrument cases have been designed to hold the card racks as shown on the previous page, in addition to associated components and a panel. They are very useful for making one of a kind instruments and similar projects which require packaging in attractive enclosures.

In use, the card rack is mounted at the rear so cards can be inserted and removed when the rear panel is taken off. An inner frame mounts both the front panel and card rack as well as an optional component mounting plate (for transformers, etc.), so the unit is held together even when the outer case is removed.

Two widths are made to accommodate both the 11½" and 19" card racks, and offering three choices of clearance between the front panel and card rack. (See table).

Material is .063 aluminum and we offer as standard both blue and clear anodized finishes. For special colors, contact our Sales Department and allow two weeks delivery. Cases are normally carried in stock for immediate shipment.

When ordering please specify the le th depth, type of back and the colo ou wish from the following chart.

Length	11½"	19"	
Depth	7"	10"	1
Back	Solid	Perforated	
Color	Blue	Clear	O er

*Allow one additional week.

Clearance between the front panel nd the circuit card rack is determine by the Nominal Depth of the case ed

Nominal Depth	Clearanc
7"	1½"
10"	4½"
13"	7½"

- Each panel 50

DE-1 POWER SUPPLY

As a supplement to our breadboard line and our packaging products, we now offer a DE-1 power supply. This versatile power supply is built on a circuit board of our standard DE-1 dimensions, and as a result, is a perfect companion to our card racks and breadboard cards. It is designed to plug into our card racks and when so installed in the end position of the card racks it occupies three card positions on the ½" center rack and two card positions on the ¾" center rack.

The regulated power supply is designed to satisfy most i.c. power requirements, having an output of about 1.2 amps @ a nominal 5.5 volts. A circuit breaker is mounted on a bracket so it is accessible when the power supply is rack mounted. Also, terminals on the power leads allow an option of external line switching.

Part No. PS-1
Price — $52.50
Delivery from Stock

MYLAR MASTERS

For the convenience of the designer, we offer mylar sheets with our board outline and with 22 pin connector fingers already photographically reproduced on the mylar. This helps save time in layout as well as helping to obtain a better finished product. There are six different types of pa erns available, four for our DE-1 size board and two for ou E-7 size (for installation in DEC assemblies). Order by part nu ber

All masters are the same price: 2:1—$3.50 ea. 1:1—$1 ea

CINCH-GRAPHIK...

World's largest independent manufacturer of

- Precision double-sided, printed circuit boards with plated-thru holes
- Multilayer printed circuit boards

High volume production for Aerospace, Missile, Instrumentation and Data Processing Industries

At Cinch-Graphik you'll find the industry's newest, most modern facilities combined with the industry's most knowledgeable, experienced people... the people that have made Cinch-Graphik foremost in its field. These are the people who have devised and developed the innovations and techniques that enabled Cinch-Graphik to develop the first through-hole plating and the first multilayer boards with 36 layers on automated equipment.

Perfection is a creed at Cinch-Graphik... out of 800 people, one in every five is directly involved in inspection and quality control. To these people, meeting the requirements of Military Specifications such as MIL-P-55110 and MIL-S-9858 has become second nature.

Cinch-Graphik can handle your largest delivery requirements... our 125,000 square foot plant houses the most advanced precision production equipment in the industry. For high volume commercial, industrial, or military printed circuit boards, look to the leader in printed circuitry... look to Cinch-Graphik. Contact your local Cinch-Sales office listed in EEM or write Cinch-Graphik, 200 South Turnbull Canyon Road, City of Industry, California 91744. Phone (213) 333-1201.

GTI CORPORATION
Dytronics Division

DIE STAMPED AND ETCHED CIRCUITS

Die stamped circuits by GTI have these advantages over etched circuits:

Tucked-in edge conductor that's ideal for cams, commutators, switches, slip rings.

Thicker conductors up to 10 oz./sq. ft. and 0.150 in. thickness with heavier current carrying ability, increased life in switching functions and greater thermal capacity and heat dissipation.

Die stamping is a dry process — chemicals are not used to print or laminate circuitry. Voids are eliminated, as well as pinholes, shorts, or undercuts. There are no chemicals that can leach out later, when circuits are in use.

Positive and accurate registration is maintained throughout the production run. Conductors are embossed and the board is blanked from the same locator holes.

TEST SPECIFICATIONS

The following specifications have been certified by Detroit Testing Laboratory, Detroit, Michigan.

HUMIDITY **Die stamped boards will withstand:**
1. 100°F @ 100% R.H. for 2 hours.
2. 160°F @ 100% R.H. in 1 hour for 3 hours.
3. 100°F @ 100% R.H. over 6 hour period.

Repeat cycle five times, totalling 60 hours, and following this:

THERMAL **Die stamped boards will withstand:**
1. From −40°F to +160°F over 3 hour period.
2. +160°F for 1 hour to −40°F over 3 hour period.
3. −40°F for 1 hour.

Repeat cycle five times, totalling 60 hours.

Die stamped circuits will pass these tests and show no broken conductors, no adhesive bond failures, no base material delamination, no excessive warpage. There will also be no loss of electrical continuity in hardware connections.

This is true also in economy grade base laminates; IE: XP, XXP.

Atec sets the standard for Digital Counting Instruments

Counters, Timers, Clocks, Totalizers, Comparators

Precision and reliability in digital instrumentation at economical prices—that's Atec. *Versatility:* each instrument performs many functions. *Flexibility:* such features as extra digits, display storage, and high stability frequency standard may be added at any time. *Modern Design:* extensive use of IC's; standard plug-in modules; motherboard PC construction to minimize wiring. *Compact:* 1¾" high panels mount in standard 19" RETMA racks. *Extra Features:* remote programming, BCD output at TTL levels, inline readout, and self-testing are user benefits from Atec digital counting / timing / totalizing / sampling / comparing instrumentation.

Universal Counter Model 2000 provides six measurement functions: frequency, period, multiple period, time interval, ratio, scale (totalize) at frequencies up to 12.5 MHz. Registers and displays five decimal digits (up to seven optional). Inputs from 0.01 V RMS to 125 V RMS, AC or DC coupling. Crystal-controlled 1 MHz oscillator as frequency standard with excellent time, voltage and temperature stability. Price: $850.

Variable Time Base or Rate Counter Model 2300 measures rate data over a wide range of counting intervals, 100 seconds down to 10 microseconds. Registers and displays four decimal digits (up to six optional). Rates to 12.5 MHz. Inputs from 0.01 V RMS to 125 V RMS. Frequency standard is 100 kHz crystal-controlled oscillator. Manual or remotely programmed control of gate time, multiplier, reset and storage. Price: $940.

Bi-Directional Totalizer Model 2400 offers m or remote selection of six operating modes: A+ pulses to register total at rates up to 10 MHz; A− tracts pulses from register, 10 MHz maximum other modes, 3 MHz maximum rate: A + B sums at Inputs A and B and adds them to register; adds pulses at Input A, subtracts at Input B; A B adds or subtracts pulses, depending on phase rel ship; A as a function of B, pulses added or subtr based on levels compared to threshold. Price: $89

Time Interval Meter Ultra-precise resolution 0.1 microseconds to 10^8 seconds is possible with 2503, used for such measurements as ballistic velo acceleration rates, nuclear phenomena, relay res times and many other transients. Inputs are adju for level, slope, polarity and coupling to trigger e at desired point on input waveform. Readout in seconds. Manual or remote programming. Price:

Electronic Counter/Timer Model 2802 me frequencies from DC to 12.5 MHz, time interv 1μsec (0.1 μsec with external clock), and also pr totalizing and ratio functions. Easily upgraded options: registration and display of up to seven d 1 MHz crystal-controlled time base. Input: 1 DC to 5 MHz; 30 mV, DC to 12.5 MHz. Overlo 125 V. BCD output drives digital printers, tape units. Price: $455.

25 MHz Electronic Counter Model 2806 is a general-purpose counter that measures frequency, ratio and totalizes. Frequency range is 10 Hz to 250 MHz without prescaling or time-base modification. Readout is displayed in Hz with a counting time of one second. Input sensitivity is 50 mV over the entire frequency range. Standard features include a 1 MHz crystal-controlled time base, stable to ±1 part in 10^8/day, 1-2-4-8 BCD output and remote programming. An optional oven-stabilized crystal is available. All solid-state IC construction, insures long, trouble-free service. Price: $1395. Crystal oven option: $75.

Digital Comparator Model 3200 is one of four comparators which generate output control signals ("Go-No-Go" or "High/Low/In" limits) based on input data and preset limit values. Measurement comparisons are made by parallel computation (as opposed to coincidence logic) permitting moving or static BCD inputs to be compared to preset limits. Models 3200 (dual limit) and 3201 (single limit) are priced at $625 and $425; Models 3202 (dual limit) and 3203 (single limit) provide algebraic comparisons and interface with bi-directional totalizers and digital voltmeters, and are priced at $575 and $525.

Digital Clock Model 3000 produces a visual display and 1-2-4-8 BCD output of elapsed or real time in days, hours, minutes and seconds. Time reference is provided by either an internal crystal-controlled oscillator or a 1 MHz or external signal. Any digit can be sent to any desired number with operator controls. BCD output for counters, printers, etc. Price $1425. Model 2906 available with standby battery supply.

Digital Frequency Meter/Totalizer Model 1130A measures frequency to 3 MHz for 0.1 and 0.1-second intervals and totalizes at rates of 3 MHz. The unit uses the power line for a time base. Four-digit readout is provided with a fifth "1" digit for overflow display. A rear panel connector provides 1-2-4-8 BCD output. Price: $189.95.

Electronic Counter Model 1131A is a general purpose frequency counter for use between 10 Hz and 3 MHz. Readout is provided by four numerical indicators with a fifth "1" digit for overflow display. Time base is provided by a precision crystal-controlled oscillator stable ±1 part in 10^6/month. Display storage retain the readout during the subsequent measurement cycle. A rear panel connector provides 1-2-4-8 BCD output. Price: $325.

Counter/Timer Model 2200A is a general purpose counter/timer with a range of from 5 Hz to 35 MHz. Standard features include display storage, remote programming, BCD output and a crystal-controlled time base. Measurement functions include frequency, period averge, totalize and timing. The standard Model 2200A provides 5-digit readout but a sixth is available as an option. Price: $495.

Universal Preset Counter The Model 2304 measures period, batch, rate, a preset number, ratio, and it totalizes. Frequency response is from DC to 15 MHz. Front-panel preset switches allow the operator to vary the time base for rate measurements, or to preset the digits representing a "batch" size. The instrument can also be used to measure the time required for a selected number of events to occur. BCD output is provided. Price: $1090.

Reciprocal Computer Model 2926 is a reciprocal computer which operates in conjunction with counters having standard 1-2-4-8 BCD output. Typical applications are the calculation of velocity, RPM or frequency from time measurements. Price: 995.

Electronic Totalizer Model 2203 is a totalizer which operates at a maximum rate of 12.5 MHz. Input sensitivity is 10 mV. Four-digit readout is standard but up to seven digits (total) is available as an option. The instrument provides 1-2-4-8 BCD output as an additional option. Price: $360.

Vol. 2 ACTIVE COMPONENTS/CIRCUIT ASSEMBLIES/CONTROLS & DRIVES

BISSETT BERMAN E-CELL (TM)

Timing & Integrating Components

- *μWatt Power Drain*
- *One-Shot or Reusable*
- *Military or Commercial Specs*
- *Timing Range: Seconds to Months*
- *Integrating Range: 1 to near ∞ Events*

Something New Under the Sun!

1. WHAT IS AN E-CELL DEVICE?

An E-CELL device is a new kind of circuit element that looks like a discrete electronic component but does the work of a complex assemb main functional part is a center electrode, which is surrounded by an electrolyte; the metallic container also serves as the second electrode. I of its physical operation, an E-CELL unit is a reversible micro-coulometer, i.e. it converts the current-time integral of an electrical function equivalent mass integral (or the converse operation) up to a maximum of several thousand microampere-hours. Exactly one atom is transfer each electron impressed on the E-CELL unit. Power drain is normally in the microwatt region. The mass integral can be read out at a known the time to read it out being proportional to the original integral. When a mass is given as part of the initial condition, this same process ge a precise time interval.

2. WHAT DOES AN E-CELL DEVICE DO?

For *timing* applications a constant current is applied to a *pre-charged* E-CELL unit. The selected time delay is determined by a combination E-CELL type and the specific constant current being used. The range of timing is from seconds to months. The output voltage swing that when the mass has been completely transferred is normally used as a bias transition with semiconductor devices. For *integration* applicati *uncharged* E-CELL unit accepts d-c, periodic, or random inputs in any waveshape and stores these as the mass equivalent of a current-time i Readout is handled in essentially the same manner that the timing function is handled for a pre-charged E-CELL unit, i.e. the measured time r to reach the point of the abrupt voltage swing, multiplied by the readout current, will be the accumulated charge integral. This could represent t "count" of a series of events analogous to the input pulses.

3. APPLICATIONS

The scope of applications is as broad as timing and counting functions themselves. New uses are continually being devised. Here are tw applications areas:

Control: You can use E-CELL devices in circuits for timing, gating, starting, stopping, delaying, relaying, monitoring, actuating, sequencing, me —wherever the control condition can be represented by an electrical signal.

Information Handling: You can use E-CELL devices in circuits for data capture, totaling and subtotaling time periods or discrete events, elaps logging, running time monitoring, out-of-limits logging, maintenance status reporting, real-time analog computing—wherever the input data represented by an electrical signal. Readout can be formatted as either analog or digital data.

PART NUMBER	PHYSICAL CHARACTERISTICS
400 SERIES	Single anode cell with leads; mil specs; ±4% charge accuracy for precharged types; −55°C to +71°C.
410† SERIES	Dual anode cell, with leads; mil specs; ±5% anode 2 charge accuracy; −23°C to +55°C.

Actual size shown.

†No. 410 Dual cells are available on special order with anode 1 charges from 0 to 40 μamp-hr and anode 2 charges from 0 to 3000 μamp-hr.

AC AND DC CURRENT SENSORS; VOLTAGE MONITORS; POWER TRANSDUCERS; ANALOG FUNCTION MODULES; MAGNETIC FLUX SENSITIVE ELEMENTS.

URRENT SENSORS D.C.

erican Aerospace Controls' D.C. current sensors are used for measurement and control applications requiring an accurate high level D. output signal proportional to the input current. Most models feature "pass thru hole" construction for the power cable providing mplete electrical isolation of the output. Models are available in grades suitable for industrial and military applications.

URRENT SENSORS A.C.

road line of "pass thru hole type" A.C. current sensors are available for measurement or control of current at standard line frequencies or er a broad frequency spectrum. The sensors produce a high level D.C. signal output that is electrically isolated from the current line. wer dissipation is negligible and economy models of these sensors may be used as replacements for shunts.

CURRENT SENSORS BIDIRECTIONAL

Bidirectional current sensors are used to sense either D.C. currents whose polarity or direction of flow may reverse or A.C. currents within the response capabilities of the device. The electrically isolated output signal duplicates the current wave form. Because of their fast response characteristics, these sensors may be used for pulse measurements and controls.

CURRENT NULL SENSORS

Current null sensors are used in feedback null balance systems. The sensors produce a large polarity sensitive D.C. output signal fo milliamp current inputs, yet will withstand high ampere over current levels. The units are thus capable of producing a null equivalent t 20 parts per million of maximum current input. The output signal is moreover electrically isolated from the input current. Application include power controls and null balance systems.

INSTRUMENTATION AND CONTROL DEVICES

A.C. VOLTAGE MONITOR

American Aerospace Controls' fast response A.C. line voltage monitors provide an isolated D.C. output voltage proportional to the A.C. RMS line voltage. The monitors respond within ½ cycle of the A.C. line voltage frequency and are very useful in protecting computer systems from program destroying transient line voltages or for detecting momentary power failures.

WATT TRANSDUCERS D.C.

American Aerospace Controls' D.C. watt transducers are used to measure power in a D.C. circuit. The sensors feature pass thru hole construction and zero insertion loss as well as electrical isolation of the current cable. The units generally respond in the micro second region and produce a linear D.C. output proportional to power input.

MAGNETORESISTORS

Magnetoresistors are magnetic flux sensitive resistors that change resistance proportional to an applied magnetic field. They are useful for flux measurements, D.C. position sensors, pick-offs, and many other electronic functions. The MRA type elements are useful for cryogenic applications. The MRI-type elements are general purpose high sensitivity elements.

BOWMAR DIGITAL PUSH-BUTTON SWITCHES WITH BCD OUTPUT

These switches provide digital or BCD output for each of the 10 switch positions. They weigh less than 0.5 ounces and have back-lighting for optimum night visibility. Designed for military and high quality commercial markets, they meet or exceed most environmental specifications and offer a life of over 1,000,000 operations. Standard models have a contact rating of 125ma @ 28 VDC or 115 VAC.

BOWMAR DIGITAL DISPLAYS AND ASSEMBLIES

Bowmar's Logicator® displays provide direct readout of decimal signals with back-lighting for optimum day and night readabilit miniature display is electromagnetically positioned and is ex reliable due to only one moving part. It eliminates the need mechanical drives, servos, or digital to analog converters.

BOWMAR COUNTERS

Message Displays

Miniature message displays feature up to 64 one-line or two-line messages. 64 position encoder output supplies one different electrical signal per message displayed. Mechanical input shown is thumbwheel, other methods available on request.

Reversing Counters

Unique design of Bowmar reversing counters permits rotation of the shaft in the same direction to provide a single sequence of both declining and increasing readings. Latitude, longitude, and decimal type readouts available on request.

Buord Angle Counters

Buord angle counters provide indication of angular increments proportional to input shaft rotation from 000° to 359°, and return to 000° with full reversible operation.

Decimal Counters

Decimal counters provide indication from 000 to 999 with return to 000 in one unit increments. Units can be supplied with servo type mounting. Two, four, or five drum units optional.

Tape Angle Counters

Tape angle counters provide 360° of angular indication on a reading face occupying less than a half square-inch of area. Operation is continuous and reversible at any point.

Internal Pinion Counters

This miniature variation internal pinion counter provides high readability. Starting at 999 West, readings decrease to 001 West. The counter then transfers to 000 East and increases to 999 East. Special mask symbols available on request.

BOWMAR 'POSTLESS' GEARHEADS AND SPEED REDUCERS

Sizes 8 through 18 available in practically unlimited variations, ratios and configurations. Features include postless construction for rigidity and precision ball bearings throughout. Types offered include conventional designs, multiple shafts, concentric shafts, square designs with clamp or screw mounting. Available separately or matched, mounted and prechecked with Bowmar servo motors. IMMEDIATE DELIVERY in prototype quantities.

Write for Stock List Brochure.

BOWMAR TIMING DEVICES

Digital readouts of hours or events are provided in Bowmar's completely self-contained units. The subminiature events indicator provides digital indication of electrical occurrences in one unit increments from 0000 to 9999 with return to 0000. The unit advances one increment with each input pulse. Ideally suited for use in reliability studies or permanent installation in systems requiring periodic service.

BOWMAR ELECTROMECHANICAL CONTROLS

AN ESTABLISHED CAPABILITY

Given a definite type of input and required output, Bowmar provides comprehensive engineering know-how, manufacturing resources and testing programs to produce equipment required to perform the intervening functions. Modules may be Bowmar designed, built to customer print or redesigned and manufactured for improvements in size, weight, performance and other values.

OWMAR AIRBORNE CONTROL ACTUATORS

ctro chanical devices shown illustrate Bowmar's capability in the uato ield. These high reliability actuators are used in current high form ce military aircraft. Designs can be provided with rotary and ear puts.

BOWMAR ELECTRO-OPTIC ASSEMBLIES

This optical guidance assembly provides continuous tracking capability for an advanced tank missile system. Custom designed electro-optic devices can readily be provided to meet the most critical performance requirements.

BOWMAR NAVIGATIONAL AND TRACKING DEVICES

pres tative of Bowmar capabilities com ning many servo components o a ulti-parameter assembly. Pro- es givational control within 12 mute of arc. Contains two control nsfo ers, two servo amplifiers, two tors precision geartrain, differen- l, re output synchros and two tenti eters.

BOWMAR JOYSTICK CONTROLS

The X-Y Control handle is capable of 60° conical movement providing corresponding rotation of two synchros. The handle protrudes 7″ above mounting surface but is capable of being stowed and locked to a height of 4″ and provides for five distinct switching functions. Switch on mounting plate provides for additional switching, light panel displays positions and functions of this switch. Unit contains relays, transformer and diodes for additional radar interfacing. Unit excluding handle is 4 x 6 x 8 inches.

Movement of handigrip in any direction produces corresponding rotation of potentiometers or other precision control components in both X and Y coordinates depending on stick position. The stick features a dead man thumb switch on top and may be positioned at any point in a 54° vertical cone. When released, the stick self-centers. Enclosure is 5¼ x 3¼ x 5¼ inches. IMMEDIATE DELIVERY with standard Size 9 potentiometers.

Two-axis control is provided by deflection of 1½″ fingersticks (std.) in a 57° cone of rotation. 1:6 sector gears operate precision control components mounted on outside of 1½ x 1½ x 1¼ inch enclosure. Small size and light weight (3 oz.) are especially advantageous for airborne uses and compact instrument panels. Self-centering stick is standard, with or without safety interlock switch provision. IMMEDIATE DELIVERY with standard Size 9 potentiometers in both axes.

MAGSENSE®

CONTROLLERS, RELAYS, COMPARATORS, ALARMS

AGSENSE Instrumentation-Current and Voltage sensing devices that will mpare electrical signals of 10^{-10} watts with a known variable reference. is enables you to connect directly to such transducers as thermocouples, ain gauges, and DC tach generators. **No pre-amplifiers required.** Power in of **100 BILLION** makes it possible to accomplish a variety of control/ arm tasks with these products.

FEATURES

- ☐ Input versatility—AC or DC isolated input
- ☐ Proven in service
- ☐ Zener stabilized set point
- ☐ Adjustable hysteresis—0 to 200%
- ☐ Solid-state reliability

- ON35 (Heavy-Duty Industrial Class); servo-size 35

. . . fully integral circuitry (quadrature square wave, pulse and/or zero outputs) . . . bi-directional or non-directional sensing . . . hysteresis feedback for jitter-free operation . . . 150,000-hr. lamps . . . +5V or +12V operation . . . all-metal, rugged housings . . . standard resolutions: 64, 75, 100, 128, 200, 250, 254, 256, 360, 500, 508, 512, 600, 625, 635, 900, 1000, 1016, 1024, 1250, 1800, 2000, 2048 and 2500 cycles/turn . . . accuracy to 6 arc minutes.

PHOTOSYN™—Optical Incremental Encoders . . . high-resolution, high-accuracy models . . . servo-size 35, all-metal housing . . . standard resolutions: 2048, 2500, 2540, 3600, 4096, 5000, 5400, 6350, 6400, 7854, 8192, 9000 and 10000 cycles/turn . . . accuracy to 10 arc seconds.

BI-DIRECTIONAL COUNTERS

Model CIC — all-TTL circuitry on plug-in PC cards . . . counting and reversing rates >5 MHz . . . single and dual axis with ±4 to 7 decades . . . in-line numerical display . . . selectable inputs: A Quad B (x1, x2 and x4), Af(B), A-B . . . BCD output . . . axis resets . . . overflow indicators . . . thumbwheel preset option . . . self-contained 118 VAC ±10%, 50-60 Hz supply . . . rack mountable and table models.

Model CII — industrial version of model CIC . . . rugged TENV steel cabinet in single, dual and triple axis configurations . . . high noise immunity . . . in-line numerical display with ±5 to 7 decades . . . BCD output and thumbwheel presets optional . . . mounting options include table, rack or swivel base . . . self-contained power supply.

New MOS Counter — economical, compact bi-directional display counter . . . 100 KHz counting and reversing rates . . . LSI circuit modules on single PC card . . . extra noise immunity . . . single, dual and triple axis configurations . . . in-line numerical display with ±4 to 7 decades . . . self-contained power supply.

Counter Modules — both TTL and MOS bi-directional display counters available as modules for OEM applications.

DIGITAL POSITION READOUTS

Digital measurement or control of rotational or linear position for machine-tool, process control, tracking, servo system and digital instrumentation applications.

Features:

ECONOMY — Greatest Value per dollar . . . FULLY INTEGRAL SYSTEM — self-contained power supply for encoder as well as counter . . . MAXIMUM NOISE IMMUNITY — high-level encoder output coupled with line-receiver counter input . . . MATCHED ENCODERS and COUNTERS for best performance, reliability and accuracy . . . selection of TTL and MOS models . . . MULTI-FEATURE FLEXIBILITY satisfies a wide range of application requirements.

Digitized Micrometer Assembly and Readout

Coordinatograph Digital Readout Adaptor Kit

DATASYN™ Digital Readout Packages

COORDINATE DIGITIZERS

DATA TECH offers a full line of Coordinate Digitizers for N/C Tape Preparation and Graphical Codification in complete systems . . . great flexibility and advantages in: tape preparation for numerical control; image plane digitizing of projections; pattern, chart and photographic digitizing; precision drawing of templates and reticles; verification, precision plotting, cutting or positioning; and numerous others.

APD SERIES

Adaptable Program Digitizer: hard-wired coordinate digitizer tailored to specific format requirements of NC tools . . . prepares final control tapes directly from artwork, non-dimensioned drawing or negatives . . . reduces operating costs, increases productivity. Rugged, fixed-position or tilt-top light tables in popular sizes . . . complete selection of **must** features and useful accessories . . . economical solution for NC tape preparation requiring extensive dimensioning; accuracy to 0.002", resolution and repeatability to 0.001".

IPD SERIES

Image Plane Digitizer: coordinate digitizer specifically for work with film projections (such as bubble chamber tracks) . . . user oriented, consists of a rugged, stable, formica covered 1" cast aluminum digitizing table with Readout/Buffer Control Electronics . . . resolution is 0.001", accuracy to 0.002" . . . compatible outputs provided for data compilation on punched cards, paper tape, magnetic tape or direct feed to computer.

UPD SERIES

Universally Programmable Digitizer: integrated coordinate digitizing system to handle a wide variety of NC format requirements . . . computer along with GRAFTRAN software provide complete program and functional flexibility (self monitoring, repeat patterns, editing, code conversion, etc.) . . . wide variety of operating features and accessory options along with selection of fixed-position or tilt-top light table . . . accuracy to 0.002", resolution and repeatability to 0.001".

UNIPULSER®
HI-SPEED DECADE COUNTER
with both VISUAL and ELECTRIC READOUT

An important, off-the-shelf component providing Extreme VERSATILITY, Space-saving COMPACTNESS, 100 Million COUNT LIFE, plus Attractive LOW COST.

This unique decade counter of modular design, with speed of 40 pulses/sec. combines visual readout on a printed number wheel and electrical readout by means of an internal etched circuit switch. Each unit incorporates circuitry for resetting to zero and transferring the pulse from decade to decade in sequential counting. A Unipulser system can be adapted to Predetermined Counting (including automatic recycle), or for many other digital control requirements. Send for Catalog 90.

Durant 49600 and 49800 Unisystems are available as complete systems for desk, panel or relay rack mounting. 49600 model is additive with a variable predetermined number; 49800 is subtractive, with a factory-wired prewarn value.

STANDARD ELECTRIC COUNTERS for INSTRUMENTATION

Dura Electrics, combining dependability, fast speed, legib ty and long life with the advantages of remote coun g of impulses, make them particularly adaptable or certain instrumentation applications. Most mod available from stock — ready to be installed with ther instrumentation in control panels, or as an integ l part of a machine, instrument or system. Coils com tely within frame — will not burn out if left on sed circuit. UL approval on 115 V AC models.

"Y" SERIES

Available with 4-6-7 figures (also dozens unit wheel). Built-in rectifier operates coil on dependable DC current. Speeds up to 1500 CPM. Knob, lock, or non-reset. Operates under severe shock and vibrations. *Models also available without rectifiers.*

"YE" SERIES

A six figure model with instant push-button or electric reset. Can be reset under power or when coil is energized. High speed, up to 2400 CPM.

PANEL MOUNT

"Y" and "YE" Series can be mounted singly or in batteries with reading line flush with front of panel.

NEW "ME" SERIES

A small, precise electric counter. Available as six-figure non-reset and four-figure reset models, with base or panel mounting. DC and 115 VAC voltages available. Speeds to 1000 cpm. Request "ME" Bulletin.

SECIAL ELECTRICS: If standard models cannot do r job, variations or specially developed counters can engineered upon application.

STANDARD DIGITAL READOUT COUNTERS for SYSTEMS and INSTRUMENTATION

Durant pioneered the development of the first standardized line of stocked instrument counters for high speed, easy-to-read digital presentations. In just a few years this "first family" has grown from 96 model variations to over 200. This extensive selection of precision counters provides you with a wide choice of wheel sizes, number of figures, types of unit wheels, rotation and side of drive. In quickly satisfying virtually all of your design requirements, Durant will save you time and engineering costs. All models available Right or Left Drive, Clockwise or Anti-clockwise Rotation.

"Y" SERIES

Series Y — 11285 (24 models)
Hi-Speed Index, 2 to 7 figures

Series Y-8822 (24 models)
Single width unit wheel, 2 to 7 figures

Series Y-8823 (24 models)
1½ width unit wheel, 2 to 7 figures

Series Y-8829 (20 models)
Double width unit wheel, 2 to 6 figures

Series Y-8831 (16 models)
Dual Bank, in line. 2 to 5 figures/bank

Series Y-8831-1 (12 models)
Dual Bank, in line. Double width unit wheel. 2 to 4 figures/bank

Series Y-9425 (12 models)
Dual Bank, stacked. Single width unit wheel. 3 to 5 figures/bank

Series Y-9448 (12 models)
Dual Bank, stacked. 1½ width unit wheel

BEARING DEGREE COUNTERS

Series Y-9994 (4 models)
Double width unit wheel. Hi-speed Geneva Index. 4 figures only

Series Y-9992 (4 models)
Single width unit wheel. Hi-speed Geneva Index. 3 figures only

"D" SERIES

Series D-8856 (16 models)
Single width unit wheel, 3 to 6 figures

Series D-8861 (12 models)
1½ width unit wheel, 3 to 5 figures

Series D-11256 (12 models)
Hi-speed Geneva Index, 3 to 6 figures

"S" SERIES

Series S-9679 (12 models)
Sub-miniature, single width unit wheel. 3 to 5 figures

SPECIAL REVOLUTION COUNTERS

— In addition to the above listed standard models, many other minor variations can be made on request for specific requirements.

ELECTRICAL AND MECHANICAL COUNTERS AND NUMBERING DEVICES

INDICATING MODULE

Model U44 — Panel mount, indicating, up to 40 pulses per second, resettable by external switch using half wave rectified A.C. source with fixed plug and removable socket.
Dimensions: Front panel 1.680″ high x ¼″ wide; Overall length 4.216″; Body height 1.125″.
Price each: $12.00
Also available with electrical readout, print wheels, high speed operation 80 pulses/second.

ELECTRICAL COUNTERS

BASE MOUNT

Model E2B—Economy electric counter, 6 digit, 110 V. 60 hz. 600 CPM, 12″ leads, non-resettable, base mount, "L" shaped mounting holes. U.L. Recognized.
Dimensions: 2.340″ long x 1.718″ wide x 1.187″ high
Price each: $5.58

Model E3A—Basemount electrical impulse counter, standard speed (500 counts per min.), knob resettable 6 digits, 115 V. 60 hz. U.L. Recognized.
Dimensions: 2.63″ long x 2.03″ wide x 2.00″ high
Price each: $16.00

PANEL MOUNT

Model P2A—Panel mount electric counter, 6 digits, 115 V. 60 hz., (U.L. Recognized) 500 CPM, non-resettable.
Dimensions: 2.63″ long x 2.75″ wide x 1.87″ high
Price each: $14.00

Model P3A—Panel mount electric counter, 6 digit, knob reset, 500 CPM, 115 V. 60 hz. (U.L. Recognized)
Dimensions: 2.63″ long x 2.25″ wide x 1.87″ high
Price each: $21.25

Model P4A—Panel mount electric counter, 6 dig key reset, 500 CPM, 115 V. 60 hz. (U.L. Recogniz
Dimensions: 2.63″ long x 4.50″ wide x 1.88″ high
Price each: $31.00

Model P6A—Panel mount electric counter non-reset with key lock, controlling two electrical circuits, one operating the counter, the other operating the equipment, 6 digit, 500 CPM, 115 V. 60 hz. key switch; D.P.S.T. standard 25 AMP, 120-250 V. A.C
Dimensions: 2.63″ long x 4.5″ wide x 1.87″ high
Price each: $24.00

Model P7A—Panel mount electric resettable counter with an exclusive key switch which turns the equipment on or off. Key necessary for manually resetting to zero, 6 digit, 500 CPM, 115 V. 60 hz., switch D.P.S.T. standard 25 AMP, 120-250 V. A.C. (U.L. Recognized)
Dimensions: 2.63″ long x 4.5″ wide x 1.88″ high
Price each: $36.00

Model 443—Panel mount electric impulse counter, high speed, add only, push button reset 6 digits, 24 V. D.C., also available with electric reset or add/subtract push butt reset.
Dimensions: 3.98″ long x 2.75″ wide x 1.81″ hig
Price each: $34.72.

ELAPSED TIME INDICATORS

Stock T4B — Miniature elapsed time indicator, 5 digit, non-reset, 115 V. 60 hz., scale 9999.9 hours, with tenths in red, panel mount.
Dimensions: 1.72″ long x 1.59″ wide x 1.03″ high
Price each: $15.50

Stock T5B—Economy elapsed time indicator, 5 digit, non-reset, 110 V. 60 hz., scale 9999.9 hours, with tenths in red, mounting in 1.968 dia. hole or 1.781 square panel cutout.
Dimensions: 1.86″ long x 2.05″ wide x 2.05″ high
Price each: $15.00

Model T5BB—Economy elapsed time indicator, 5 digit non-reset, 110 V. 60 hz., scale 9999.9 hours with tenths in red, mounting in 1.968 dia. hole.
Dimensions: 2.88″ dia., 2.14″ long.
Price each: $15.95

Model T8B—Panel mounted elapsed time indicator, records hours and minutes only in 6 V., 12 V. and 24 V. D.C. only, mounts in 2⅜″ dia. hole.
Dimensions: 2.6″ dia., 2.36″ long.
Price each: $27.63

ENM Company, Inc. • 5306 W. LAWRENCE AVE., CHICAGO, ILLINOIS 60630 • 312-282-8787

ELECTRICAL AND MECHANICAL COUNTERS AND NUMBERING DEVICES

ELAPSED TIME INDICATORS

Model T10A — Low cost elapsed time indicator, 5 or 6 digit, hours or minutes scale with tenths in red, non-resettable, 115 V. 60 hz., other voltages available, universal bracket mount.
Dimensions: 2.25″ long x 3.0″ wide x 2.31″ high.
Price each: $15.10.

Model P8C — Economy elapsed time indicator with security lock and key, only actuates a standard D.P.S.T. switch 25 AP, 120-250 V. A.C. to start equipment; thus true operating hours are recorded. 5 digit, non-reset, 110 V. 60 hz., scale 9999.9 hours with tenths in red, panel mount.
Dimensions: 1.828″ long x 5.505″ wide x 1.891″ high
Price each: $29.50

Model T20A — Elapsed time indicator, 5 or 6 digit, hours or minutes scale with tenths in red, knob resettable, 115 V. 60 hz., other voltages available, universal bracket mount.
Dimensions: 2.45″ long x 3.0″ wide x 2.31″ high.
Price each: $18.60

Model T2B — Low cost 7 digit elapsed time indicator, records hours, tenths and hundredths, tenths in red, hundredths with sweep hand, knob resettable, 110 voltage, 60 hz. panel mount.
Dimensions: 4″ long x 1.87″ wide x 1.87″ high
Price each: $22.00

Model T30A — Elapsed time indicator, 4 or 5 digits, hours, minutes or seconds scale with tenths in red, push button resettable, 115 V. 60 hz., other voltages available, universal bracket mount.
Dimensions: 2.81″ long x 3.0″ wide x 2.31″ high.
Price each: $20.73

Model T3B — Low cost dual 7 digit odometer elapsed time indicator, records hours, tenths and hundredths, tenths in red, hundredths with sweep hand, one odometer knob resettable, other total time, 110 voltage, 60 hz., panel mount.
Dimensions: 4″ long x 1.87″ wide ″ 1.87″ high
Price each: $27.50

MECHANICAL COUNTERS

Model 426 — Small medium duty 6 digit mechanical stroke counter with resettable knob and operating lever, 1000 CPM, base mount.
Dimensions: 1.63″ long x 1.00″ wide x 1.045″ high
Price each: $7.68

Model 428 — General purpose heavy duty, 6 digit, mechanical double shaft counter, revolution drive, adds or subtracts one count for each complete revolution of input shaft, 10,000 CPM, base mount with resettable lever.
Dimensions: 3.094″ long x 2.250″ wide x 1.781″ high
Price each: $30.94

Model 421—Small medium duty 6 digit mechanical revolution counter, 3000 CPM, non-resettable, base mount.
Dimensions: .994″ long x 0.790″ wide x .838″ high
Price each: $5.18

Model 433 — Tape recorder counter with push button reset, worm drive, 1 count per input revolution, 4 digit, high speed, adds and subtracts.
Dimensions: 1.66″ long x 1.89″ wide x .87″ high
Price each: $7.50

Model M99 — Exceptionally economical tachometer combines hand speed counter and stop watch to measure rpms, rated to 6000 rpm max., knob resettable.
Dimensions: 2.36″ dia.
Price each: $52.92

PREDETERMINING COUNTERS

Model M36 — Predetermining mechanical counter, 3 digit, 200 strokes per min. Predetermined contact is a single pole double throw switch, capacity 5 A., 250 V. A.C. Terminals on switch, panel mount, preset by 3 setting knobs.
Dimensions: 2.155″ long x 3.062″ wide x 2.312″ high
Price each: $20.50

Model PE 35 — A three digit 115 W. electrical predetermining counter 200 pulses per min. Predetermining contact is a single pole double throw switch, capacity 5A, 250 V. A.C. panel mount. Preset by three setting knobs. U.L. Recognized.
Dimensions: 3.580″ long x 3.062″ wide x 2.312″ high
Price each: $24.98, 2 figures; $26.53, 3 figures

ENM Company, Inc. • 5306 W. LAWRENCE AVE., CHICAGO, ILLINOIS 60630 • 312-282-8787

Eagle industrial and commercial time/count contro

A complete line that includes solid-state, electronic, electromechanical, and pneumatic types in commercial, industrial and military grades. Eagle also designs and produces custom time/count devices and systems for special applications. More than $1 million in stock plus professional ser e at 35 major areas throughout the world, inclu g U.S.A., S.A., Europe, U.K., Canada and Austr a. For complete data, write Eagle Signal, 736 Fed al Street, Davenport, Iowa 52803.

Time-Delay or Single-Cycle Timers

HP Cycl-Flex®—Plug-in case easy to install, reduces downtime. Dial ranges from 5 sec. to 60 hrs. Series also includes solid-state reset timer, 80-count timer, pulse timer, and percentage timer.

CE400 New Solid State—Adjustable delay between actuation of control and operation of load circuits. Mirror dial minimizes parallax errors. Plug-in case.

CG Solid-State Series—Reliable, accurate and economical for applications requiring delay up to 60 sec. Adjustable knob timer plugs into octal relay socket . . . a perfect replacement for pneumatic timers.

Repeat Cycle Timers

HG Flexopulse®—Dual-function with single dial for 30-sec. to 60-hr. cycles. Adjustable without setting cams or changing gears.

MP Multipulse Adjustable Cam Actuator—2-12 SPDT switches. Cycles from 6 sec. to 36 hours. Contact t- ing, 10 amps @ 120 VAC.

CA Solid-State—Continuous on-off cycles from 3 o 1000 times/minute. Load handling capacity 1 a p @ 120 VAC.

Counters

CT120, CT130—Solid-state. 1200 contact clos e counts/minute. Min. closure 40 milliseconds, m . opening 10 milliseconds. Binary thumbwheels; plug n case.

Sequence Programmers

MT Step Switch—Up to 19 circuits turned on and f in sequence established by break-out cams. For c - trol of machines and processes.

GULF + WESTERN INDUSTRIES, INC

ELECTRO MINI-PROX

Low Cost — Plug-in Type

Model 55125 Mini-Prox with Model 41060 plug-in socket and 85001 sensing head.

Compact Proximity Sensing System for Non-contact, Detection and Control of Ferrous and Nonferrous Metals

Accuracy of sensing distance is often a critical factor in sensing and control applications. Mini-Prox accuracy can be depended upon in any environment; heat to +160°F or cold to −30°F at either probe or control. Line voltage variations from 105 to 130 volts — dust — moisture — vibration, none of these affect its accuracy. You can set it and forget it.

Plug-in design provides for easy wiring. Unitized construction eliminates soldering or wiring of sensitivity controls. Connections for power, sensing head and relays are made to screw-type socket terminals. Operations up to 600 per minute may be controlled or monitored by the Model 55125 illustrated. Electronic output models for higher speeds are also available.

5 STANDARD TEMPERATURE-STABLE SENSING HEADS

Model No.	Sensing Face Dia.	Sensing Range	Overall Length	Mounting	Cable
4943	.312″	.050″ to .250″	1⅝″	⅜″ - 24	10′
4944	.375″	.050″ to .250″	1¼″	clamp	10′
85.001	.655″	.050″ to .250″	2⅛″	bracket	10′
85.002	.655″	.100″ to .500″	2⅝″	bracket	10′
85.003	.750″	.300″ to 1.000″	3¾″	bracket	10′

MINI-PROX MODELS FOR A VARIETY OF FUNCTIONS

Model No.	Output	Additional Data
5125	10A DPDT Relay output	115V Power
5126	10A DPDT Relay output	230V Power
5141	Electronic output +12V metal near; −0.5V metal away	115V Power
5145	Electronic output +12V metal near; −0.5V metal away	230V Power
5132	Delayed-make relay unit	.05 - 1 sec. delay
5133	Delayed-make relay unit	.5 - 10 sec. delay
5136	Delayed-break relay unit	.05 - 1 sec. delay
5137	Delayed-break relay unit	.5 - 10 sec. delay
5148	Solid State AC output	3 Amp 200 Vp
5147	Solid State DC output	1 Amp 150 V max.
MINI-PROX OR MAGNETIC PICKUP SPEED CONTROLS		
5149	These 5 models cover 5 ranges from 0.1 Hz min. to 15,000 Hz max. Each have optional under or over-speed control and optional latching feature.	Freq. .1 to 1.5 Hz
5150		Freq. 1 to 15 Hz
5151		Freq. 10 to 150 Hz
5152		Freq. 100 to 1500 Hz
5153		Freq. 1000 to 15,000 Hz

ELECTRO MANUFACTURES A COMPLETE FAMILY OF MINI CONTROLS TO SOLVE A BROAD VARIETY OF PROBLEMS

Mini-Speed Solid-State control for under/over speed detection of shafts —gears—any moving ferrous or non-ferrous metal. Activated by electronic output Prox, Magnetic Pick-up, or Di-Mag.

Mini-Prox Switch Solid-State AC or DC controls for applications demanding limitless switching activations or extremely high switching speeds. For use with Mini-Prox Models 55141, 55145 only.

Mini-Delay Solid State Delay Relays for delayed-make or delayed-break control applications. Both types activated by contact closure or Mini-Prox electronic output.

Mini-Tach Frequency to DC Converters for applications requiring the conversion of any time varying electrical signal into a DC voltage or current.

Vol. 2 ACTIVE COMPONENTS/CIRCUIT ASSEMBLIES/CONTROLS & DRIVES

MORE FUNCTIONS IN LESS SPACE

radiation hardened magnetic Flat Pak modulators, analog multipliers, demodulators mount directly on IC cards.

- **Flat Pak design only 0.1″ thick.**
- **Zero Hysteresis.**

Accuracy 1% absolute or 2 MV whichever is greater

As an Analog Multiplier of a Bipolar DC signal times an AC signal, the output **product accuracy** is 1% of point, or 2 MV, whichever is greater over a dynamic range of 10,000:1 in each quadrant.

Over the temperature range of —55°C to +125°C, the following parameters hold:

1) Zero Point Drift: ..... Less than 2 MV of in phase component
2) Gain Slope Stability ..... Less than 2% change.
3) Dynamic range and output wave quality independent of temperature variations

Typical input/output parameters:

X Signal: ..... 0 to ±5V
Y Signal: ..... 0 to ±5V
Output: ..... 0 to 5V RMS across 5K or greater load impedance

- Hybrid assemblies mount directly on IC cards.
- Space saver design . . . typical dimensions 0.1″ th x 0.5″ x 0.75″.
- Rugged design, extreme reliability, MTBF design goal 25 per million hours.
- Extremely low drift over —55° to +125°C range.
- Not affected by high intensity nuclear radiation.
- Capable of operating on carrier frequencies as high as ve Mhz.
- One or more isolated or floating input signals may be ed for modulating, multiplying, dividing, squaring or extra ng a root.
- No external nulling or offset adjustments.
- No additional components or compensation required.
- No external operational amplifiers required.
- Standard ±15V DC power supplier unless otherwise s ci- fied.

There is No Substitute for Reliability

A typical unit gives 1 v. DC per 1 v. AC and provides 10K impedances on both signal and reference windings. This demodulator provides less than 2% absolute linearity from 0.1 v. to 10.0 v. output. Operation is over an ambient range of —55°C to +125°C. Output impedance less than 500 ohms DC; offset null less than 8 mv over the entire ambient range.

'Mag Mod' Micro-miniature Magnetic Modulators

... Design Analog Computers with Micro Magnetics

General Magnetics

Typical Performance Data — Model 748-3

- Output distortion as low as 1%
- Electrical zero point and gain, repeatability and stability over the entire service life
- Extremely broad bandwidth
- Carrier frequencies as high as 5 MHz
- Input signal current resolution better than 0.001 μa
- Low milliwatt power consumption

Circuit Isolation—DC to AC Sinusoidal Conversion and Amplification

"MAG MODS" PROVIDE FOUR QUADRANT OPERATION, extreme stability with negligible change of phase, gain and zero position over a wide temperature range. Design is simple, featherweight and rugged—with no vacuum tubes, semiconductors or moving parts to limit life.

MICRO MAGNETIC MODULATORS FEATURE an essentially drift-free circuit with superior phase and gain stability over wide environmental ranges. All the ruggedness, dependability, wide dynamic range and stability that are characteristic of the larger magnetic modulators are engineered into this new magnetic circuit. MICRO "MAG MODS" are shock and vibration proof, provide infinite standby and service life. The micro modulators below are typical; for specifications on other models request literature.

"MAG MODS" conform to MIL-T-27A and MIL-E-5400 Specifications

Prime Components in Solid State Design—The "MAG MOD" family of Magnetic Modulators has proven to be the most reliable module circuit block in aircraft and space vehicle flight control systems developed to date. They are universally accepted and in use in many military and commercial products where reliability is a price factor. Request literature.

Design Analog Computers with Micro Magnetics..

G/M Solid State Magnetic Demodulators

FREQ. RANGE 60 Hz to 10 KHz

General Magnetics

G/M MAGNETIC DEMODULATORS are solid state circuits for converting phase reversing AC signal voltages into phase detected polarity reversing DC voltages; the amplitude and polarity of the DC output are directly proportional to the phase and amplitude of the AC signal.

- High reference impedance resulting in very small reference power requirements
- Output as high as ±10 v. DC in present units
- Unit operation frequencies; 60 Hz to 10 KHz
- Operation over wide environmental range
- Very low DC offset null voltages (as low as 0.1% of full scale)
- Signal and reference terminals may be isolated
- Low output impedance
- Small physical size

All units available in wider temperature ranges. See Bulletin 108B for other stock types.

There is No Substitute for Reliability

A typical unit gives 1 v. DC per 1 v. AC and provides 10K impedances on both signal and reference windings. This demodulator provides less than 2% absolute linearity from 0.1 v. to 10.0 v. output. Operation is over an ambient range of −55°C to +125°C. Output impedance less than 500 ohms DC; offset null less than 8 mv over the entire ambient range.

Micro Magnetic Multipliers

AC x DC MONOLITHIC ANALOG COMPUTING MODULES

..For Unlimited Life and Superior Performance!

General Magnetics

MONOLITHIC MICRO CIRCUIT BLOCK for analog voltage multiplying of DC x AC voltages.

ADDITION, SUBTRACTION, MULTIPLICATION, AND SQUARING of many voltage variables may be handled by one G/M Magnetic Microblock.

PRODUCT ACCURACY of up to 0.2% of full scale, with very slight derating over a wide temperature range.

- Proven reliability—unlimited life
- Extreme stability with negligible change of product accuracy over a wide temperature range
- High shock and vibration proof
- Bandwidth may be extended into the kilocycle
- Low milliwatt power consumption
- Four quadrant operation
- Repeatable data over years of continuous unattended operation
- Simple, lightweight, rugged
- May be mounted directly on printed circuit cards

World's Smallest and Most Reliable G/M ANALOG VOLTAGE MULTIPLIER

New micro-miniature G/M Analog Voltage Multiplier as small as 0.1 cubic inch, weighing as little as 0.1 ounce.

Solid State Sine-Cosine Synchro Converter

This new encapsulated circuit converts a 3-wire synchro input to a pair of d-c outputs proportional to the sine and cosine of the synchro angle.

- Complete solid state construction.
- Occupies a volume of only 3.2 cu. in. (Single Channel)
- Operates over a wide temperature range.

Typical Specifications
Type DMD 1193-2
Deal Channel Synchro Converter
ACCURACY — Overall conversion accuracy 6 minutes.
AMBIENT TEMPERATURE:
RANGE — Operating −40°C to +1[illegible]C
Storage −62°C to −1[illegible]C
APPLICATIONS — Analog computers
Flight systems
Fire control
Guided missiles

DUAL CHANNEL SYNCHRO CONVERTER General Magnetics Model DMD 1193-2 provides two (2) completely independent sine-cosine synchro converter circuits in one package. Overall conversion accuracy is six (6) minutes. Temperature range is —40°C to +100°C.

This new General Magnetics circuit converts a 3 wire synchro input to a pair of d-c outputs proportional to the sine and cosine of the synchro angle. The circuit features complete solid state construction, occupies a volume of only 3.2 cubic inches and operates over a wide temperature range. Overall conversion accuracy defined by the tangent of the angle whose sine and cosine are generated is six (6) minutes. Models are available with both single and dual channel outputs.

Magnetic Division Modules

These modules can be engineered to meet the most exacting requirements. They employ a new concept which eliminates high gain operational amplifiers and logarithmic circuitry previously used in electronic dividers. This means fewer components resulting in high reliability, excellent stability, micro-miniature size and lower cost. The combination of magnetic and semiconductor circuitry results in analog division with accuracies of 1% or better over wide environmental ranges. The output is an AC sinusodial signal which is the quotient of an AC numerator and a DC denominator.

Specifications — Type MDM 889-1*

*Above specifications apply only to MDM 889-1 and may be changed to fit exact requirements

EXCITATION (NUMERATOR):	0.4 V to 8 V : 800 Hz
BIAS:	+30 V DC
OUTPUT LOAD:	5 K
SIGNAL (DENOMINATOR):	30 MV to 600 MV
AMBIENT TEMPERATURE RANGE:	0°C to +70°C

Micro-miniature Size
Completely Solid State
Low Power Consumption
Wide Numerator and Denominator Ranges
Isolated Inputs
Low Output Impedance

These dependable analog computing modules are widely employed in flight systems, fire control, analog computers, guided missiles, nuclear equipment, antennas and thousands of control systems. Micro-circuit, miniature, subminiature, standard and specials are available for proven reliability in linear division, trig function conversion, automatic gain control, etc., applications.

ul line of high quality industrial time count, control devices

APSE TIME INDICATORS

EF 27 — **BULLETIN EF-1**
Simple through-panel stud mounting. All mounting hardware provided. Synchronous AC motor direct drives six digits, readout in minutes—or hours—and tenths. Monitors maintenance, rental time, running time . . . wherever accurate record of elapsed time is important. Square Bezel 2⅜" unit, depth 1²³⁄₃₂", barrel diameter 2.077".

EF — **BULLETIN HD-12**
Synchronous motor-driven, panel mounted non-resettable unit registers minutes and tenths, or hours and tenths. 6 digits. 120 or 240 VAC, 50 or 60 Hz. Round bezel 2⅞ diameter, unit depth 1.790" and barrel diameter 2.110".

EN & ER — **BULLETIN HD-12**
Dust cover enclosed unit with round or square bezel. These meters read in minutes and tenths or hours and tenths. Can be resettable or non-resettable. Units operate on 120 or 240 VAC, 50 or 60 Hz. Bezel diameter 3½", Rd; 3.0", Sq. Unit depth 3¾", barrel 2²³⁄₃₂" dia.

7010-004 HERMETICALLY SEALED MILITARY TYPE INDICATOR — **BULLETIN HD-12**
A very small, lightweight running time meter, hermetically sealed. Meets Mil specification requirements per Mil-M-7793C and Mil-E-5272C. Life tested over 78,000 hours. Readout four digits plus tentns. Temperature range −55°C to +85°C. Round case 1¾" square bezel, 2³⁄₆₄" deep, barrel diameter 1½". 115 volts 400 Hz. Solder terminals. Shipping weight: ¾ lb. Also available as ED 71 Commercial version 60 Hz.

ELECTONIC

HAYDON QT21 SOLID STATE REAR MOUNTING TIMERS — **BULLETIN QT-21**
Moisture-resistant coated PC board. Knob-adjustable time periods. Rear mounting. SPDT relay 10 amps, 125 VAC resistive. Power input 117 volts, 60 Hz. Repeat accuracy ±2% of set value under constant conditions of temperature and voltage. Power standing on this timer has no damaging effect. Maximum reset time 130 milliseconds. Dial accuracy 10% of full scale. ¼" male spade terminals. Size: 3⅜" x 2⁵⁷⁄₆₄" x 3⅝". Two ⅜" x ⅝" slotted mounting holes on 2⅞" centers. Average weight, 1 lb.

HAYDON QT52 SOLID STATE OCTAL PLUG TIMERS — **BULLETIN QT-52**
Basically same specifications as QT21, except has octal plug mounting and DPDT relay. Size: 4⅜" x 3⁹⁄₁₆" x 2⅛".

ELECTRICAL RESET TIMERS

SERIES DA TIME DELAY TIMERS, REAR MOUNTING — **BULLETIN HD-12**
Type DA11. Manually adjustable by knob. Apply wherever delay, interval or repeat cycle timing functions are required (repeat cycle requires two units). Resets to start position when power is removed. SPDT switch rated 20 amps. 125 or 250 VAC, resistive; solder lug terminals. Min. setting 0 sec. Repeat accuracy ±¾% of total time range. 5 watt motor. 120 VAC 60 Hz. U/L listed. Size: 3⅜" W x 2¹³⁄₁₆" D x 3⅛" H. Weight: 1½ lbs.
Type DA21. Same as DA11 but with locknut adjustment to eliminate tampering.

SERIES DP11 PANEL MOUNTING RESET TIMER — **BULLETIN HD-12**
Adjustable time range by simple pointer knob. Apply wherever delay, interval or repeat cycle timing are needed. Readout of elapsed time by pointer in center of knob. Unit resets to start position when power is removed. 125 or 250 VAC resistive. Timing motor rated 5 watts max. 120 VAC 60 Hz. Repeat accuracy ±1% of total time range. Screw terminals. Size 3⁵⁄₁₆" sq. x 3⁹⁄₃₂" D., behind panel; requires 3⁹⁄₁₆" dia. mounting hole cut.

BN41 (INTERVAL) AND BN42 (DELAY) PANEL MOUNT — **BULLETIN HD-12**
Dial and setting knob with readout of elapsed time by pointer in center of knob. SPDT relay rated 10 amps at 125 or 250 VAC. Timing motor rated 5 watts max. 120 VAC 60 Hz. Repeat accuracy ±¾ of 1% of total time range. Screw terminal block. Size: 3⁵⁄₁₆" sq. x 4⅜" D.; behind panel. Requires 3⁹⁄₁₆" dia. mounting hole.

SERIES BJ-12 PUSH-BUTTON INTERVAL TIMER — **BULLETIN BJ**
Panel-mount timer. Timing interval is initiated by manually setting knob to selected position and manually depressing the push button. Readout of elapsed time by pointer in center of setting knob. Instant reset to start position automatically. SPDT switch rated 15 amps, 125 or 250 VAC resistive. 120 VAC 60 Hz. Repeat accuracy ±½% of full scale. Combination spade and solder lugs size: 3⁵⁄₁₆" Sq x 2²³⁄₃₂" D, behind panel; requires 3⁹⁄₁₆" dia. mounting hole. Weight: 1½ lbs.

SERIES RE62 REPEAT CYCLE MULTI-CAM TIMERS
BULLETIN HD-12
Run continuously, repeating set cycles of multiple switching operations as long as motor is energized. Complete unit requires one motor and one or more switch stacks. Two-switch unit size 2⁵⁄₁₆" H x 3²³⁄₃₂" W x 3⁹⁄₁₆" D; add ¹¹⁄₁₆" to depth for each additional switch.

TIMING MOTORS

MA26 — **BULLETIN MA**
The MP26 is a hysteresis type motor designed for timing operations. Power output is 6 oz./in. at 1 RPM 60 Hz. Output shaft speeds are available from 1 rev per month to 60 RPM. 450 RPM without gear-train @ 60 Hz. Output shafts are available in four standard, plus many special configurations in round, flatted, knurled, and with cross-drilled hole. Operating voltage ranges are 24, 120 and 240 VAC. Frictions are available for manual turning of shaft below 15 RPM. MP26 has standard pear shape gear housing and mounting flange. Mounting holes are on 1.875" centers.

MP20 POWER MOTOR — **BULLETIN MP-20**
This timing size synchronous AC motor has an output rating of 200 oz./in. @ 1 RPM over the range of 103 to 132 VAC or 206 to 264 VAC at 60 Hz. Guaranteed minimum running life 10,000 hours. Output shaft speeds 1, 2, 3, 4, 5, 6, 10, 15, 20, 30 and 60 RPM. Output shaft available in 2 standard types, long round and long with flat, for other configurations consult factory. Mounting standard pear shape holes on 1⅞" centers. Rotation can be CW or CCW.

ANTI DISTURBANCE SWITCHES
Model 604

(Shown Actual Size)

- Micro-miniature
- Ultra-Sensitive
- Low cost

SPECIFICATIONS

PHYSICAL

- Housed in standard TO-18 transistor package measuring only .213" in diameter by .190" length, nominal
- 1.2 to 2.5 "G" nominal sensitivity
- Other sensitivities special

ELECTRICAL

- Normally open contact configuration closes upon being subjected to accelerative disturbances beyond its rated sensitivity level
- Contacts rated up to 10MaDC at 5VDC
- Repeatability better than 20%
- Temperature effect on sensitivity is better than 1%

APPLICATIONS

- Seismic intrusion detection systems
- Burglar Alarms
- Wherever a building or device must be safe guarded against intruders
- Out of balance detector

The Model 604 represents a significant step forward in acceleration sensitive switches for those involved in anti-intrusion devices and the burglary protection business. Operating over a wide temperature range, the Model 604 series can be easily concealed in doors, floors, window frames, ceilings, filing cabinets, safes, etc. Its sensitivity to acceleration can even be used to detect footsteps from an intruder.

DIGITAL COUNTERS
Model 607 & 608

- High speed
- Instant reset
- Preset capability
- Ultra-reliable
- 4 and 6 digits available
- Remote reset capability

TESTED TO BEYOND 140 MILLION OPERATIONS!

SPECIFICATIONS

- Only 1¾" high, 4" deep and 3¾" wide (4 Digit Model 607)
- Only 1¾" high, 4" deep and 4½" wide (6 Digit Model 608)
- 115VAC 60Hz or 16-32VDC input (Specify your choice) Optional front or rear panel mounting

4 DIGIT CONFIGURATIONS

- 9999
- Also available with time of day readout
- 59:59

6 DIGIT CONFIGURATIONS

- 999999
- Also available with time of day readout
- 11:59:59
- 23:59:59

Wedge lighting and HEA-coated, non-glare glass options. Manual or remote start/stop/reset controls are standard features.

THE MOST MODERN DIGITAL COUNTER AVAILABLE

New 4 and 6 Digit counters utilizing a revolutionary magnetic drive and escapement principle resulting in an order of magnitude reliability improvement among commercially available counters. The Model 607 series counters eliminates wear parts inherent in conventional Geneva mechanisms by a unique separation of the counter wheel drive and digit advance control mechanisms, and a computer-tested magnetic clutch drive system.

For additional products see GIBBS MFG. pages 1450 to 1455 (Section 2300).

MJOR BREAKTHROUGH IN TIMING

ow ailable from GIBBS — two unique types of Timing Devices alled lectrolytic CELLS or COULOMETERS. The timing capability of ese hits range from thirty seconds to many months. For the first me, e Design Engineer can specify just one type of timing device at i **nfinitely variable** to accommodate a truly wide range of timing nterv, and meets all military environmental requirements.

IBBS lectrolytic CELLS are available in two classifications; **mechani-al s tching and impedance-change switching.** Both classifications re dendent on a simple current/time relationship for their opera-ion, d are specified in terms of "ampere-hour" capacity. The me-hani switching devices mechanically close (or open) switch con-acts the end of the timing period. The impedance change cells xhibi approximately a 10 to 1 change in impedance at the end of the timing period, sufficient to trigger an SCR or Transistor. Input currents range from 5 μA to 2.7 Ma.

GIBBS Electrolytic Cells are ideal for use where a predetermined time action is required. **Applications include:** Signal when maintenance is due; Indicate conclusion of warranty; End-of-life Indicator; Sonobuoy scuttling; Airframe Inspections, Ordnance Safety and Arming; or any timing function ranging from 30 seconds to many months where small size, low cost, ruggedness, accuracy and low current consumption are desirable.

GIBBS Electrolytic CELLS are almost perfect current/time integrators and respond accurately to any input — steady state, pulse, square wave, triangular, etc. Because of this unique integration capability, the designer can successfully work with almost any number of inputs to accurately monitor system operating conditions. SEND FOR FREE DATA AND ENGINEERING APPLICATION NOTES.

For additional products see GIBBS MFG. pages 1450 to 1455 (Section 2300).

UNIVERSAL TIMING MODULES

SERIES TMP

Series TMP Time Delay Modules are available in "on-operate" and "on-release" configurations with two time delay and three standard input voltage ranges. The time is externally adjustable within the two ranges from ½ to 100 seconds and 100 to 300 seconds. Repeatability is ±1 percent under normal conditions. Life expectancy is in excess of one-million cycles. Standard input voltages are 24VAC, 115VAC and 24VDC. Other ranges are available as options. The unit is terminated in an octal plug for quick mounting and remote control of relays.

SERIES TMT

Series TMT Time Delay Modules are designed to permit a relay to be mounted directly onto the module or to permit stacking of TD modules for extended time delay periods. The unit can also be soldered directly to a printed circuit board if desired. Modules provides "on-operate" or "on-release" operation at input voltages of 24VAC, 115VAC and 24VDC. Other input voltages are available as an option. The time delay is externally adjustable within ranges of ½ to 100 seconds and 100 to 300 seconds. Repeatability is ±1 percent under normal conditions. Life expectancy is in excess of one million cycles.

TIME DELAY RELAYS

SERIES TDO

Although it incorporates many features of more expensive units, California Guardian's Series TDO is the most economical 115VRMS solid-state time-delay on the market. Time delay is adjustable from 0.5 to 30 seconds and is controlled by a ten-turn potentiometer. The multi-turn potentiometer provides high resolution, easy reset and accuracy. Series TDO time delays are built to U/L standards. The unit terminates in a standard octal plug for easy mounting. It is accurate within 10 percent of a nominal setting over it's entire temperature range.

SERIES TD

Similar to high-priced military units, the lower-cost series TD is the most accurate and compact time-delay relay available from stock. Six models for 24VDC to 115VRMS provide delays from 0.5 to 180 seconds. Silicon semi-conductors and tantalum capacitors are utilized for reliability. A 15-turn screw-type potentiometer provides high resolution and accuracy. Recessed screw prevents inadvertent changing of time delay setting. Accuracy is 5 percent of nominal setting over it's complete temperature and voltage range. Repeatability is 2 percent after a line interruption of 50 milliseconds. DC units are polarity protected.

CONTROLLED SENSORS

California Guardian's line of solid state controlled sensors and protective devices is the broadest available. Designed for the instrumentation and power equipment industries, sensors are available for 3-phase average sensing; over-voltage sensing; close differential voltage sensing; phase rotation sensing; and over-frequency and under-frequency sensing. Sensors are non-latching, may be interwired with a latching relay, or wired for self latching and pushbutton start and reset. The unit can be socket mounted or chassis mounted and wired with quick disconnect or soldered connections. Voltage and frequency sensors are transient protected.

SPECIAL ASSEMBLIES

California Guardian will design any type of special sensor or control assembly. In most cases, circuitry has already been designed which eliminates engineering costs. For your special circuits, contact California Guardian. Our engineering department will give your requirements immediate attention.

The unit shown is an undervoltage sensing relay alarm designed for power utility use.

HECON QUALITY COUNTS

A Complete Line of High Performance Electro-Magnetic Counters

Hecon counters do more than count. They are highly reliable control devices that exercise control by counting.

Our exclusive building block design permits many system variations and applications. Used as an individual control instrument, or as part of a control system, Hecon counters can solve your control problems.

For reliable, low cost digital control systems, only Hecon offers a complete line of high performance electro-magnetic counters featuring closed loop design.

F 043 TOTALIZING COUNTER
Modular 6 digit plug-in unit, with either manual or electrical reset—speeds up to 60 counts per second—life in excess of 200 million operations.

FE 043 SUBTRACTING PREDETERMINING COUNTER
Modular 4 digit plug-in counter features easy push button preset and optional presignal. Available with manual/electric reset and automatic recycling. Speeds up to 40 CPS—life in excess of 200 million operations.

FA 043 PREDETERMINING COUNTER
Modular 6 digit plug-in unit, with manual, electrical or automatic reset, for speeds up to 35 counts per second—life in excess of 200 million operations.

HECON

Better by Design

Hecon engineers can help you solve your counting and control problems with Hecon high performance counters—reliably and economically. Write or call today for full information on these and other Hecon counters.

Automatic motion control in manufacturing, assembly & packaging? in production machinery & machine tools? in electronics & data processing? in research and developme welding? graphic arts & printing? or instrumentation?

ICON: your complete, ready source for direct digital positioning!

ICON automatic systems, subsystems and modules and know-how in stepping motor technology can help you automate your plant and products simply and economically!

ICON AUTOMATIC MOTION CONTROL SYSTEMS INCLUDE

ELECTROHYDRAULIC PULSE MOTORS

. . . a complete line of high power motors built by Fujitsu, Ltd., for direct digital positioning in heavy applications such as machine tools, textile and printing machinery, welders, typesetters, automated production machinery, etc. Torque output exceeds 500 in-lbs. at 2000 steps per second. Power ranges from .8 to 10 HP at 6.000 steps per second.

HIGH SPEED ELECTRIC STEPPER MOTORS

. . . variable reluctance steppers that are the fastest, most advanced digital actuators in America, today. Available in a wide range of torques with error-free response rates of 2000 pps, and running speeds in excess of 10,000 pps.

DIGITAL SYSTEM POSITIONING MODULES

. . . for the engineer who wants to design and package his own positioning control system. A full line of solid-state driver modules for most stepping motors, plus general purpose system logic modules using NAND logic.

MULTI-AXIS STEPPER PROGRAMMERS & DRIVE UNITS

. . . Icon Series 400 positioning s tems emphasize high motor perfo ance and input flexibility. Able to d up to 6 independent steppers of type. Accept inputs ranging f switch closure to computer. Rea interface with other system elemen

NUMERICALLY-CONTROLLED X-Y TABLES

. . . two complete lines of X-Y tab covering the motion range from 2 2" through 12" x 12". Speeds in cess of 2 ips, resolution of .001 in Ideal for automation of producti assembly and test. Many con options available.

HIGH SPEED NUMERICAL CONTROL SYSTEMS

. . . with extremely reliable I.C. lo very flexible program structure. A vanced, low-cost control for a w range of automatic 2 or 3 axis po to-point positioning applicatio Open-loop, all-digital design for sim application, operation, service.

SPEED-INDEPENDENT MAGNETIC PICK-UP

The B-12E Magnetic Pick-up is the first of a family of devices from ISC/Magnetics with output voltage amplitudes that are independent of the rate of change to the external magnetic field. This characteristic and its relatively low output impedance result in a device ideally suited for use with transistor circuitry of the type often found in flow control and computer peripheral equipments for *Static* as well as Dynamic sensing.

Typical output using a 20 pitch ferrous gear at a sensing distance of 0.020 inches is 1V peak to peak at an ouput impedance of 500 ohms.

why design your system around someone else's black box?

IEC specializes in CUSTOM UNITS and SYSTEMS to meet your requirements. A QRC (Quick Reaction Capability) design and manufacturing facility is available to service customer needs.

This concept provides each customer with equipment possessing the exact functional capabilities, and the physical configuration determined best for his particular needs.

It also eliminates the additional interfaces normally required for "off the shelf" equipment; reducing overall cost and providing a totally integrated system.

Let us quote on your requirements today.

ELECTRIC and PNEUMATIC COUNTERS and ACCESSORIES

E-16 TOTALIZING

E-14 TOTALIZING

- Adds at speeds up to 100/sec.
- Long life
- Small rugged size
- Choice of 5 mountings
- Special wheels available

EVS-15 PREDETERMINING 5 DIGIT

EVS-13 PREDETERMINING 3 DIGIT

- Up to 50 counts/sec.
- Counts down from the pre-set No. to operate a built-in control switch as count passes zero.
- Electrical reset
- Automatic reset and recycling

ED-15 ADD-SUBTRACT

- Speeds to 40/sec. Add or Subtract
- Electrical reset available
- 5 digits maximum

B-2 RUNNING TIME METER

- Snap-in mounting
- Attractive appearance
- Small size but easily readable

MOUNTING OPTIONS

- Plug-in (illustrated)
- Snap-in
- Sealed housings

SPECIAL MODIFICATIONS

- Operating temp. down to minus 20° F.
- Shock and vibration resistant
- Special wheels for minutes, seconds, hours
- Illumination

MEDIUM DUTY ER SERIES

- 3, 4, 5 & 6 digits
- With or without manual reset
- Extremely small size
- Numerous mounting options

EA-16 and EDA-15 TOTALIZING OR ADD-SUBTRACT WITH READOUT

- Visual as well as electrical readout
- Very low power requirement
- BCD or 10 line readout

EQ SINGLE DECADE COUNT/ CONTROL MODULE

- Totalizing or add-subtract
- Resets from DC
- Visual as well as electrical readout

P-16 and P-15 PNEUMATIC COUNTERS PREDETERMINING and TOTALIZING

- Pneumatic reset available
- Built-in pneumatic switch
- Speeds up to 50/sec.
- Operating pressures from ¾ PSI and up

SODECO Impulse Counters for

TOTALIZING

In modern instrumentation, production controls, and data handling systems, a rapid, accurate means of totalizing is often required. Low cost, easily read totalizing impulse counters are preferred as the means of recording this information. Sodeco totalizers, due to their reliability and small size are widely specified for counting instruments, control systems and centralized control stations.

PREDETERMINING

These small 4 or 5 digit counters provide for visual in-line count and control function in a single compact unit. It is readily preset to any number from 1 to 9999 (9) and after the preselected number of counts have been registerd a SPDT contact reverses permitting a control function. Applications calling for automatic recycling or batch counting prefer Sodeco predetermining counters.

PRINTING

Whenever a permanent record of units or events is desired, the Sodeco printing counter for serial and parallel entry counting, will serve to maintain this record, with a minimum space requirement. As count is by electromagnetic action, the counter may be remotely located from the point of count generation.

TOTALIZING

No reset 3 to 8 digits, manual toggle reset 3-6; counting speed — 10, 25 or 50 impulses/second. (8 digit non-reset 10 ips only) DC operation. Model illustrated TCe7e. **Send for Bulletin 201.**

Electric reset by single impulse; 4, 5 or 6 digits; 10, 25 or 50 impulses second; DC operation. Model illustrated TCeF6E. **Send for Bulletin 201.**

Pushbutton resets figures to zero; 4, 5 or 6 digits; AC (10 i/sec max) or DC (10 or 25 i/sec). Model illustrated TCeBZ5E — 1.654″ x 2.047″ x 1.811.″ **Send for Bulletin 212.**

NON-RESET ECONOMY COUNTER— DC 12, 24, 48, 110; 10 i/sec; lif tation minimum 50 million i Model illustrated TCe5. 1.10″ x 4.49″. **Send for Bulletin 223.**

PREDETERMINING

This series of 4 and 5 digit DC operated counters count from a preset number toward zero. They are preset to any number from 1 to 9999 (9) and after the preselected number of counts have been registered a SPDT contact reverses permitting a control function. Model illustrated TCeF4PE. 1.722″ x 3.228″ x 4.016″. **Send for Bulletin 402.**

This predetermining counter is basically equivalent to the TCeF4PE type, however the supply is taken directly from 110 or 220 VAC and is protected by a sturdy aluminum housing. The count and reset coils are provided with a spark suppressor within the unit. 10 impulses per second AC operation. Model illustrated 2TCeF4PE — 2.01″ x 4.02″ x 4.42″. **Send for Bulletin 402 and Technical Manual 2TCeF4PE.**

For automatic recycling of predetermining impulse counters. For 24 VDC only — 1.75″ x 3.00″ x 1.65″. **Send for Bulletin 422.**

ADD-SUBTRAC

A rugged differential counter with systems and a control contact. In is on one register with 1 system and 1 system subtracting. A SP tact is actuated when the registe the zero position. AC or DC op Model illustrated TiZ4RcEh. Se **Bulletin 501.**

PRINTING COUNTERS

2 Models

Visual readout and print; 6 digit serial entry totalizer; 10 impulses per second; AC or DC operation. Model illustrated PL103 — 2.84″ x 5.67″ x 7.72″. **Send for Bulletin 371 and Technical Manual 1112.**

Visual readout and print; 5 decades for serial and/or parallel entry counting; 10 or 20 impulses per second; DC operation. Not illustrated model PN107 — 2.84″ x 5.76″ x 7.16″. **Send for Bulletin 372 and Technical Manual 1112.**

This printing counter provides not only a 6 digit serial entry totalizer but also a synchronous motor (110 V AC) driven time and date register of month, day, hour and minute. 10 impulses per second for serial entry totalizer. If parallel entry 20 impulses per second — 5.67″ x 5.67″ x 7.72″. DC or AC operation. **Send for Bulletin 372 and Technical Manual 1113.**

Also available for printing on card or tape and card.

This unit consists of 10 decades for parallel entry counting. Any combination of decades may be wired for serial entry and in order to cover a wide range of applications alpha drums for code identification and special ratio drums for time and date registration have been made available. 10 or 20 impulses per second. DC operation. Model illustrated PN207 — 5.67″ x 5.67″ x 7.16.″ **Send for Bulletin 372 and Technical Manual 1113.**

A multi-element unit providing a mum 20 decade capacity, printing or card. Any 5 decade element removed and in its place a 6 digit entry totalizer or a synchronous driven time and date register. Thi capacity printer can be equippe any combination of elements suita definite applications. DC operation. illustrated PL4005. 11.34″ x 5.67″ x **Bulletin 372 and Technical Manual**

Also available for printing on c

SINGLE DECADE READOUT COUNTERS

This new Sodeco ES4 Electric readout counter makes available in one compact unit a single digit, high speed impulse counter equipped with a 10 position readout switch, a transfer contact, a zero reset contact and a predetermining switch. Less than 2″ high, 1″ wide, & 3″ deep. Counting speed 25 ips. Standard voltage 24 V DC with 12 and 48 V DC on special order. **Send for Bulletin 102.**

COMPACT TOTALIZER — New, compact, low wattage, long life counter, 6 digit (8 without reset); counting speeds 25 or 60 c/sec; non-reset, manual or electric reset; 24 V DC standard. 1.89″ x 0.94″ x 2.83″. Surface or flush mounting. **Send for Bulletin 801.**

NEW TOTALIZING COUNTERS

The new Sodeco Model RG..E impulse counter with front-plate and spring loaded mounting is a compact, low wattage, long life counter that is ideal for multiple counter installations. Available with manual, electric, or no reset. Available in 5, 6 or 8 digits and counting speeds of 10, 25 or 60 ips. 24 V DC is standard, 12, 36, 48, 60, 110 and 220 V DC also available. **Send for Bulletin 801.**

New, compact, low wattage, long li pectancy counter that is ideal for m counter installations. For flush mounting. Silent operation non-reset, and electric reset. Low power consum Life expectancy more than 200 impulses. 24 V DC Standard — 6, 12, 60, 110 & 220 V DC available. Also 1 Standard — 24 and 220 V AC avai 1.89″ x 0.94″ x 2.83″. **Send for Bulleti**

Write for detailed specifications and application information.

NOTE: Part numbers are for illustrated types. Also available in variations indicated.

Broad variety of types and wide range of operating voltages permits selection of the precise counter for the application.

MALLORY INDUSTRIAL TIMERS

Series MIT

Miniature Industrial Sequence Programmers

This small-size timer does big-size jobs. Measures only 2⅜" x 2⅞" x 2¾" including the motor. Comes with one or two cams, either adjustable or fixed. Select a cycle, from seconds to hours, change it with a simple manual adjustment. Designed for industrial service as interval or cycle timer.

Series IT

Multi-cam Industrial Sequence Programmer

Simple, quick, convenient. That's what it's like to change the cycle of this Mallory adjustable cam industrial timer. All you do is pull the spring-loaded cams apart, reposition to the cycle you want, let go... and you new cycle is locked in place. Changes as small as two degrees give flexibility to any automated product. The basic timer design comes in units of 5, 10 or 15 cams with virtually any time cycle and circuitry you need. Enclosed snap-action switches, tested for 1 million cycles, are rated 15 amps, 125 VAC.

Electronic assemblies—complete engineering and production facilities for design and manufacturing of special components.

Series SD

Compact - Heavy Duty Timers

Switches four 25-amp circuits and a 10-amp circuit. The 3" x 3" x 1" size lets it fit behind a panel or inside a console. Designed for long-life, heavy-current applications such as dryers, furnaces, copying machines, battery chargers. Comes in a wide variety of time cycles and physical configurations.

Series LRT

Interval Timer

A compact, versatile hand-set electric timer. Heavy duty, 15 amp, rated switches provide a wide variety of switching functions. A neutral, or "center-off" switch position is available, as is a double upper ("make-make") configuration.

Setting the desired interval may be done by turning the shaft in either direction... even during a timing cycle. Many standard cams along with the wide range selection allow the LRT to meet most OEM dial layout specifications easily, without tooling.

"Hold" feature is available, allowing a non-timed setting during which the load under control is "on".

Applications include: hair dryers, heat lamps, blenders, battery chargers, food warmers, conveyor feeds, barn heaters, therapy machines, sterilizers and many others.

SPECIFICATIONS

OVERALL DIMENSIONS
2" dia. x 1¾"

AVAILABLE SWITCHING
SPST, SPDT, SPDT with neutral or double make positions (see other side)

SWITCH RATING
15 amp, 125/250 VAC
½ HP, 125/250 VAC

MOUNTING
Threaded bushing

TIMING MOTOR
Permanent magnet, 120 VAC, 60 Hz (standard)
24 to 240 VAC available — also 50 Hz

SHAFT ROTATION
Counter clockwise (standard), clockwise on request

TERMINALS
3/16" flag on one lead, other stripped (standard)

TIME CYCLES AVAILABLE

SECONDS	30	40	48	60	72	90	96						
MINUTES	2	2.5	3	4	5	6	8	20	30	40	45	50	60
HOURS	2	2.5	3	4	5	6	8						

More than 100 other speeds, not listed above, are available.

Series BST

Solid State Timer

All solid state reset interval timer. No moving parts. High repeat accuracy over a wide range of temperature and voltage. Rugged housing permits easy mounting and connections. Timer and power output circuits protected against transient surges, noise. Ranges to five minutes.

Standard Mallory components are available from authorized Mallory distributors throughout the United States.

NORTH HILLS · HIGH-PERFORMANCE SYSTEM MODULES

ALARM, CONTROL, INSTRUMENTATION, DATA TRANSMISSION

North Hills is expending continuing engineering effort in developing families of standard System Modules for automatic test and process control applications. They are intended to free the systems engineer from the uneconomical diversions associated with the generation of detail hardware.

The System Modules briefly described below are representative of many that are being offered. North Hills is ready to extend existing or create new designs as necessary. Your inquiries are invited.

FREQUENCY AND SPEED INSTRUMENTATION

ELECTRONIC TACHOMETERS. Series SD Tachometers accept inputs from magnetic pickups, photochoppers, ac generators and similar speed sensors. Outputs are dc voltages or currents proportional to input frequency, virtually independent of waveform and amplitude. Preset trip-points can be included for alarms purposes.

FREQUENCY MONITORS — OVER, UNDER, BANDPASS. Series FM Frequency Monitors are frequency-responsive limit switches providing alarm indications by contact closure when input frequency is above or below one or more preset trip-points. Can be used for surveillance of any parameters such as speed or flow that can be represented by frequency. Fast response. Handle wide range of input voltage and waveform. Excellent repeatability and stability.

ZERO-SPEED SWITCHES. Series LK resemble FM Frequency Monitors, but are designed for alarm indication arbitrarily close to abnormal zero-speed condition.

VOLTAGE TO FREQUENCY AND FREQUENCY TO VOLTAGE CONVERTERS FOR DATA TRANSMISSION

DF and FD Series. Low-cost and compact. Standard models for full-scale frequencies of 100 and 500 Hz, 1, 5, and 10 kHz Exceptional linearity and stability.

VP and PV Series. Matched converters achieve 0.1% system linearity. 100 Hz to 10 kHz full-scale frequency models. Two-cycle response.

INDUSTRIAL CONTROL ALARMS AND TRANSMITTERS

ALARMS — CA Series. Provide relay contact closure when input level drops below preset level. Standard models for ac and dc mA, A, mV, V and thermocouple inputs.

TRANSMITTERS — CT Series. Have standard current outputs of 1-5, 4-20, 10-50 mA dc proportional to input levels derived from dc millivolt sources such as thermocouples.

DC VOLTAGE REFERENCE SOURCES

Series RA-50. Solid state compact (2.4″ x 1.3″ x 0.9″) mo for PC board mounting. Unregulated dc input, 10 V. no output with 3 ppm stability. Temperature coefficients to 0.1 ppm/°C. Loadable 0 to 5 mA. Short-circuit prot

RS-10. Ac line-powered version of series RA-50 con with dc power supply and resistor trimming string for 10 V. output. 4″ x 6″ PC card.

VS-510. Programmable 0 to 32 V, 0 to 100 mA v source. Output varied linear by external resistor. In trimmers for true zero and full-scale outputs. Four-ter remote sensing, short-circuit protected. 4″ x 6″ PC card

AC VOLTAGE REFERENCE SOURCES

VS-410 IN-PHASE REFERENCE SOURCE. Output 10 ±0.1% at 0° or 180° with respect to input 26 V rms ± 350-5000 Hz.

VS-420 QUADRATURE REFERENCE SOURCE. Same a 410 except + or −90°.

VS-430 AC VOLTAGE PROGRAMMABLE SOURCE. Mu preset, relay-selected, programmable output levels at 180° with respect to 10 V ±0.1% input, 350-5000 Hz.

VS-440 AC VOLTAGE & PHASE PROGRAMMABLE SO Multiple outputs preset, relay-selected programmable and phase angles between 0° and 360° with respect to ±0.1% input, 350-5000 Hz.

VS-450 AC CONTINUOUSLY PROGRAMMABLE VOL SOURCE. Output adjustable 0-32 V rms by means of ex potentiometer at 0° or 180° with respect to input of rms ±20%, 350-2000 Hz.

AC INSTRUMENTATION MODULES

PR Series. Precision ac to dc converters. Operational fiers accept input from 10 Hz to 10 kHz and furnis output proportional to input level. Fast response ve with low ripple for very low-frequency operation.

AS Series. Unity-gain amplifiers with narrow bandpa band-reject filters. Standard frequencies: 400, 1000, 4800 Hz.

Precision Counters

Planet readout counters can be designed for navigation, tracking, ranging, time, positioning, computing, fire control and industrial applications. Typical parameters include high speed, low torque, light-weight, miniturization and maximum reliability.

Metering Counter
(Internal Pinion Type)

A-749-1
Digital Counter
(Internal Pinion Type)

In-Line Double Bank Variation Counter
Applications—To indicate variations in navigational, dead reckoning, missile guidance and tracking systems.

Miniature 3 and 4 Drum Internal Pinion Counters
Applications—Navigational components, missile tracking devices, fuel flow measurements, engine performance measurements, altimeter readings, various linear indications.

Double Bank Internal Pinion Variation Counter
Applications—To indicate variations in navigational, dead reckoning, guidance and tracking systems.

Tape Angle Counter
Applications—Navigation, servo position indication, fire control systems, azimuth indication, missile tracking systems, and any application requiring readout in angular increments.

Sub-Miniature Elapsed Time Indicators
These elapsed time indicators are part of a complete line of indicating devices marketed by Planet Instruments. They are microminiature hermetically sealed units, available for operation on 400 Hz. All standard MS 17322 models, plus many optional mounting configurations are available.

Cantilevered Internal Pinion Counter
Applications—Navigational components, missile tracking devices, fuel flow measurements, engine performance measurements, altimeter readout, various linear measurements.

3 Digit Angle Counter
A revolutionary new concept in a mechanical angular readout counter. The Tri-Block angle counter measures only 1.250 x 1.084 x 1.392 yet incorporates large .250 high numerals. This unique design eliminates costly and complex timing assemblies found in other types of angle counters while providing distinct advantages in the area of torque, human engineering characteristics, viewing angle and numeral alignment.

Altitude Select/Alert Controller Display
A fully integrated panel display for use on Altitude Alert Systems. All inputs are mechanically integreted thru the differential and geartrain to course and fine tune synchros or potentiometers that may be attached to the rear bearing plate. Many additional features such as built in clutches, auxiliary push to actuate micro switches may be provided as required.

printing digital voltmeter

for a permanent record of any engineering unit of measurement . . .

At $500.00 base price in a half-rack 3½" package PDM-611 makes printing possible of engineering units of measurement entered in analog fashion.

A 3½ digit DVM is mated to a new miniature 6 column printer. The printer records an identification number over- or under-range, and scale with fixed decimal point at rates to 3 lines per second. Normally recording volts from 0 - 199.9 V in 4 ranges, space is provided inside for customer supplied linearization networks, etc. for operation from a variety of tranducers. Also supplied with BCD out for data links.

Bulletin 710-B describes this basic device. Our catalog on Printers, Digital Displays and Counters is yours for the asking.

PROGRAM

Economy Program Timer

Choice of — 3 to 8 Poles, 39 Stk Speeds, 7 Switch Spacings.

Program Timer

Standard Stocked Units used in Vending Machines and 100s of other products. Tab Terminals — Field Replaceable Switches — Up to 20 Load Circuits.

H. D. Program Timer Heavy Duty Switches

Choice includes: 22 or 25 Amps (1 h.p.) Many, Many Types Shelf-Stocked, Plus Specials.

Low Cost Programmer

Standard or Special Models Ideal for Continuous or Intermittent Operations.

Panel Mount Programmer

Manually Settable While Running or De-energized, Plus Completely Versatile Design.

DELAY AND INTERVAL

Pushbutton Delay Relay

Your choice of 100s, Standard Stk, Time Delays Plus Specials.

Multi-Pole Chassis Mount

Reset Ganged Delay Relays 2 to 20 Poles.

Panel Mount Adjustable Delay Relay

10 thru 25 Amps 1, 2 or 3 Pole 8 Time Ranges.

Precision Time Delay Relay — Interval Timer

Standard or Special — Times Down to Zero Exactly, Then Holds to Your Special Program.

Time Delay Relay Interval Timer

Fully Adjustable — Employed to Delay Transfer of a Heavy Duty Action Switch.

TOTALIZE

Pulse Accumulator

Produces Signal at End of Predetermined Pulse Countdown.

Hours Meter

Standard Shelf Stock with Instant Pushbutton Reset and Convenient Behind Panel, Easy Installation.

Running Time Meter For Behind-Panel Installations

Resettable with Thumb-Wheel or Non-Resettable.

Running Time Meter

Low-Low Cost, Yet Accurate and Reliable. Standard Stock Shelf Units Very Popular.

Pushbutton Reset

Fully Synchronous. Choose from: Square or Round Bezels — Instant Reset with Pushbutton for Extremely Fast Data Readings.

SPECIAL PURPOSE

Percentage Timer

Provides Manually Selectable Output Pulse During Each Fixed Cycle.

Variable Pulse Generator

A Percentage Timer with One or Two Pair of Independent Programming Cams. An Ideal Photocopier Control.

Delay With Pulse Output

Special Purpose — 2 Pole Delay Relay, Yields Delay Plus Pulse.

Ultra-Reliable Starter Timer

Specially Built Starter Timer for Diesel-Electric Emergency Generators for Hospitals, Schools, Public Buildings.

Delay With Local Pushbutton

Manually Adjustable Delay Relay/Interval Timer for Local Pushbutton Operation.

the broadest line of olid state timing devices

e Electronics transistorized series of timers (time elays) are of the fixed or adjustable type, designed in light or heavy industrial and commercial appli- Timers consist of solid state circuitry driving a tained relay, (except MTS — fully solid state).

Since the timer circuit eliminates cams, clutches and motors, there can be no mechanical wear, thus affording long dependable life and highly reliable operation. Many models are interchangeable with mechanical, pneumatic, thermal and other electronic timers.

ELECTRONIC MODULE AND SYSTEM CAPABILITY

DIGITAL AND ANALOG LOGIC MODULES

- Basic DTL functions
- Functional logic configurations
- Clock and timing modules
- Logic and output interfaces
- D/A, A/D, and multiplexing modules
- Indicator, relay and logic drivers
- Power supplies
- A full line of complimentary hardware, including bus bars, connectors, chassis, slides and enclosures

CUSTOM DIGITAL SYSTEMS

- Custom system design and fabrication

Systems available for:

- Data acquisition
- Time coding
- Memory
- Arithmetic operations
- Multi-channel A/D conversion
- Encoding/Decoding
- Function monitoring

AEROSPACE-MILITARY TIMING AND CONTROL DEVICES

- Hi-Rel timers for use in temperature range of −250° to +250°F
- 2 of 3 voting timers with reliability of 99.999999997%
- Visual display timers
- Radiation hardened timers
- Weapon safing systems
- Ordnance weapon controls
- Airborne encoders
- Time code generators

SPEED CONTROL, MONTORING, AND SENSING DEVICES

- Under/Over speed detector
- Tachometers
- Multi-point speed detection systems
- Transducers with integral electronics
- Open and closed loop DC speed control systems

SPECIALIZED HIGH-DENSITY ELECTRONIC PACKAGING

Tempo/UTI has developed HI-D®—a highly reliable, economical, and easily maintainable method of packaging electronic circuits.

TYPICAL COMPONENT DENSITY

HI-D® is a stitch-wire welding process which consists of cold-flow welding insulated nickel wire to gold-plated stainless steel pins. Components are welded or soldered on the opposite side of the wired board. All connections are insulated and conformally coated for ruggedized use.

Major advantages of using this technique are:

- Only one basic board is used, from which a multitude of logic configurations can be wired.
- Design modifications can be made with relative ease—a feature not available using other interconnection techniques.
- HI-D® permits full use of LSI and MSI circuits, allowing installation of multiple packages on a single board, with a resultant decrease in back plane wiring.

INTERMIXING OF COMPONENTS

STITCH-WIRED INTERCONNECTIONS

CORDWOOD WELDED MODULE

In addition to the HI-D® packaging capab Tempo/UTI is equipped to perform other type specialized connections, including wave solde gap welding, and construction of "Cordwo welded modules using capacitance discha opposed electrode equipment.

Our welding facility and operator training prog is rigidly controlled to the requirements of MS STD-271.

INDUSTRIAL SOLID STATE TIMERS

The Most Complete Choice Available

SERIES 999

Solid-State Machine Tool Control Timer

Specifically designed for applications requiring accuracy and reliability under rugged environmental conditions and high duty cycles, such as 2-million or more operations per year and cycles greater than 500 cycles per hour. Accuracy better than 2%. Unlimited life rating. Screwdriver-adjustable time delay. Switch-selectable timing logics and NO or NC static 1.2 amp output contacts.

SERIES 888

Highest quality solid state timers for the ultimate in reliability, quality and versatility. Adjustable timing from 0.15 sec. to 60 min. Complete choice of timing logics, mounting styles, and input voltages. AC timers feature transformer operation.

SERIES 666

Moderately priced solid state timers in plug-in package. Adjustable timing from 0.15 to 300 sec. Input voltage 115 VAC. All circuits are completely protected by zener regulation.

SERIES 444

Low cost solid state timers for wall or panel mounting. Adjustable timing from 0.15 to 300 sec. Plug-in output relay. Input voltage 115 VAC, 28 VDC, or other.

SERIES 111 & 333

NEW! The only low cost solid state timers with positive electronic latching plus choice of mounting (plug-in or rear-chassis) and three different timing logics. Adjustable timing from 0.5 to 180 sec. Input 115 VAC or other voltages.

Series UT-100

Series UT-200

Series TR-300

Series TR-400

Series UT-500

Series UT-600

Miniature Motor Timer, Series UT-100 & UT-200

● High reliability. ● Various dials. ● Compactness. ● Easy maintenance.

The TEC Miniature Motor Timer, Type UT is a synchronous motor-driven timer in which the contacts open or close after a set time. The Timer has an indicator which moves toward "zero" during the timing, showing how much time remains. Many models are available in various time ranges from a 10-sec type to a 24-hour type.

■ **Specifications**

Repeat accuracy: 10-sec. timer...0.2 sec.(accur. / 24-hr. timer...28.8 min.

Contact ratings: AC220V, 2A (resistive load) AC220V, 0.5A (inductive load p.f.=0.4) DC110V, 0.2A (resistive load)

Life: Mechanical life: 1 million operations. Electrical life: 500,000 operations. Total operating time: 20,000 hours.

Solid State Timers, Series TR-300 & TR-400

The ultimate in solid state timers. Precision-made, ideal for short-time controls. Circuits designed for high frequency use and long-life service. Highly stable and accurate, small and light. Highly reliable capacitors used. Of plug-in type with pilot lamp. Six models available in time ranges of 1, 3, 6, 15, 30 and 60 seconds.

■ **Specifications**

Contact ratings: 3A at 220V a-c (resistive load) 1A at 220V a-c (p.f.=0.4) 0.5A at 220V d-c (resistive load)

Repeat accuracy: ±2% of full scale

Life:

Minimum mechanical life: 5,000,000 operation

Minimum electrical life: 2,000,000 operations

■ **Models**

Mounting		Time Range in sec.	Operating Volts		Cont
Surface type	Flush type		a-c	d-c	
TR-301	TR-401	0.1~1	110/220V 50/60Hz	24	SPD
TR-303	TR-403	0.3~3			
TR-306	TR-406	1~6			
TR-315	TR-415	3~15		48	
TR-330	TR-430	5~30			
TR-360	TR-460	15~60		110	

Miniature Motor Timers, Series UT-500 & UT-600

Compact and economical motor timer redesigned in line with the popular UT-100 and UT-200 series of motor timers.

■ **Features**

● Smart design. Plug-in type terminal. ● Economical price due to simplified mechanism requiring no moving pointer. ● Available in a variety of types ranging from 10 seconds to 24 hours in either surface-mount or flush-mount types.

■ **Specifications**

Contact ratings: 220V AC 2A (resistive load) 220V AC 0.5A (inductive load p.f.=0.4) 120V DC 0.2A (resistive load)

Repeat accuracy: ±2% of full scale

Life: Minimum mechanical life: 1 million operations/Minimum electrical life: 500,000 operations / Total operating time: 20,000 hours

TOKYO ELECTRIC CO.,LTD.

The 5th Hasegawa Bldg., 14-8, 1-chome, Uchi-Kanda, Chiyoda-ku, Tokyo, Japan

When it comes to counting, recording or controlling, come to Veeder-Root

The 7102 Digi-Flex* Predetermining Counter: Electrically driven. Off-the-shelf. Both versatile and economical. Ideally suited for control applications in industrial environments.

The 7[illegible]3 Econ-Flex* Totalizing Counter: Five-decade, in-line illuminated display. High speed, high readability. Solid state. Integrated electronic circuitry. Long life tubes, polarized window filter. Counts even if lamp fails. For linear measuring, rapid production totalizing of steel, metals, textiles, containers, pills, etc.

The 7108 Digi-Clock Time Display: Offers a wide range of features for computer input. Self-contained desk unit or component of larger systems. Readout code: decimal or BCD.

The 7283 Predetermining Counter: Rapid reset counter with positive electrical knock-off. Features a positive interlock and base or panel mount. Recommended for industrial precision control.

The [illegible]669 Visicounter* Totalizer: Ruggedly-built counter with distinct figures. Ideal for use on heavy equipment like power presses and industrial machines.

The 7272 Reset Counter: For indoor and outdoor use where small size, accuracy, and legible figures are essential. Features acetal resin components and a corrosion-resistant case.

The 7170 Precision Instrument Odometer: Light yet durable counter with modular wheel construction, providing flexible design opportunities. High speed 500 rpm. Meets applicable Mil Specs.

The 7162 Jewel Bearing: Features individual wheel and pinion supports. Sturdy aluminum frame and wheels keep weight low. For use in servopneumatic altimeters. Exceptionally low torque 0.0002 oz-in.

The 7437 Electric Counter: A low cost electric counter featuring a one piece frame construction for greater reliability and simplicity of design. Ideal for office machines or coin-operated equipment. Available with 5 or 6 figures and a variety of mounting configurations. AC or DC.

The 7438 Reset Electric Counter: Offers the convenience of push-bar reset with the economy of rotary reset. Simple, one piece frame construction assures reliability. Ideal for test equipment, control equipment and office machines. Available with 5 figures and a variety of mountings. AC or DC.

The 1969 Veeder Decade* Totalizer: Single wheel, electric counter with electric readout, transfer and reset. Features narrow width with large figures for outstanding readability.

*Trademark of Veeder-Root

Veeder-Root always comes through with the finest equipment you can buy.

In fact, our line of counters is so complete, it'll solve any application problems you may have.

For further information on our full line of mechanical, electrical and electronic totalizers and controls, write to: Veeder-Root, Hartford, Connecticut 06102.

VEEDER-ROOT

INNOVATORS IN NUMERICS: COUNTING/RECORDING/CONTROLLING

Veeder-Root World-Wide: Argentina: Buenos Aires•Australia: Melbourne•Brazil: Sao Paulo

OSCILLATOR
Series SHP

100Hz to 20M

NAFI STANDARD HARDWARE PROGRAM

FEATURES
- Functionally Specified Design
- State of The Art Advances
- Crystal Controlled
- Digital Dividers
- High Reliability

APPLICATIONS
- SHP Systems
- Computer Clock
- Voltage Reference
- Pulse Generator
- Reference Oscillator

GENERAL COMMENTS

Accutronics is a qualified vendor for the U.S. Navy Standard Hardware Program. New NAFI design concepts stimulates quality control and in process production programs to insure Hi-Rel modules.

Accutronics has capabilities of production of vari s oscillators in the NAFI Functionally Specified des n approach. For further up to date information ple e contact our sales staff.

SPECIFICATIONS

Frequency Range: 100Hz to 20 MHz
Frequency Tolerance: ±0.005%
Temperature Range: 0°C to 65°C
Supply Voltage: +5VDC ±5%
Waveform: Square
Symmetry: 50/50 ±1%

Source Voltage: >2.5V and <5V peak
Sink Voltage: 0.0V ±0.3V @ 5MA
Rise & Fall Time: <20 Nano sec
Load Impedance: IC Logic
Size: NAFI "C" Dimension
Termination: 40 pin connector

For additional products see GIBBS MFG. pages 1450 to 1455 (Section 2300).

POWER SERIES
Series 200

60Hz to 10k

FEATURES
- Crystal Control
- Digital Dividers
- Worst Case Design
- Wide Frequency Coverage
- 5 Watt Capability
- Amplitude Adjustment
- Small Size

APPLICATIONS
- Synchronous Motor Drive
- LVDT Drive
- Acoustic Measurement
- Audio Reference Generator
- Tone Signalling
- Resonant Reed Communications
- Low Impedance Audio Bridges

Pin Connections:

Pin #1 — Common
#2 — Plus Supply
#4 — Case Grounded
#7 — Output
#8 — Output

HIGH STABILITY OSCILLATOR
Series 165

1MHz to 150MHz

FEATURES

- All Units Operate On Frequency Without Multiplication
- Low Spurious Content
- Excellent Short Term Stability
- Low Harmonic Content
- Logic Compatibility

APPLICATIONS

- Frequency Source For Multiplier Chain
- Telemetry Main Carrier Source
- Integrated Circuit Clock
- Digital Scanning Clock
- Computer Time Base
- Reference Oscillator

RC VOLTAGE CONTROLLED OSCILLATOR Series 180

100Hz to 40KH

FEATURES

- Excellent Stability
- Small Size
- Low Current Drain
- Choice of FM Deviation
- Wide Frequency Coverage
- IRIG Compatibility
- Logic Compatibility

APPLICATIONS

- IRIG Channels 1-16
- Low Frequency Telemetry
- Transducer to Frequency Conversion
- Sub Carrier Generation
- Phase Locking
- Pulse Modulation
- Signal Averaging

ARVIN FREQUENCY DEVICES

complete frequency management capability

ARVIN TCXO & TCXO²

Arvin temperature compensated crystal oscillators provide precise frequency management without the use of ovens, permitting small size, light weight, instant warm-up, and low power drain. Sine, square, or pulse outputs are available. Units generating more than one frequency can be provided. All circuit values are computer optimized. Following are typical specifications. Let us know your exact requirements.

TCXO

Many units available off-the-shelf.

Example: 1 MHz $\pm 5 \times 10^{-7}$ $-40°C$ to $+75°C$ @ $150 in single quantities, 5-day delivery.

Example: 2 to 10 MHz $\pm 1 \times 10^{-5}$ $-55°C$ to $+85°C$ @ $55 in single quantities, 5-day delivery.

TCXO²

Designed to fill the gap between TCXO's and high-power ovens.

Typical specifications: 1 to 10 MHz $\pm 1 \times 10^{-8}$ $-40°C$ to $+75°C$.

Dimensions: 2″ × 2″ × 1″.

ARVIN TC/VCXO

Arvin TC/VCXO's have all the advantages of Arvin TCXO's combined with a unique voltage control capability. This gives Arvin TC/VCXO's even greater flexibility without the need for external compensating circuitry or added power. Units generating one or more frequencies can be provided with sine, sawtooth, or pulse outputs. Following are typical specifications for Arvin TC/VCXO's. Send us your exact requirements.

Frequency Range.....to 50 MHz

Frequency Deviation..to ±1000 PPM depending upon freq. and temp.

Deviation Sensitivity.....to ± 200 PPM/volt

Deviation Rate .....DC — 20 KHz

Linearity.....to ± 1% of best straight line

Input Voltage....± 10 to ± 50 VDC

Packaging.....MIL, NASA, or commercial

Frequency Stability.....to ±1 PPM depending on frequency and temperature

OSCILLATOR & SYNTHESIZER R&D

Arvin Frequency Devices is equipped to design, develop, and manufacture in quantity a variety of oscillators and frequency control equipment. Our specialty is high reliability TCXO, VCXO, TC/VCXO devices, low frequency crystal oscillators and synthesizers for miniaturized communications applications. We have built

TCXOs for satellite, missile, airborne, and portable ground equipment applications. Arvin Frequency Devices provide precise frequency management in the smallest possible package, some as small as one cubic inch, with low power drain and stabilities as high as 1 PP 10^7 in a range to 200 MHz. Let us help solve your frequency management problems. We welcome research and development contracts. Call us early in the design stage.

CRYSTAL OSCILLATORS INCORPORATING TEMPERATURE CONTROL

CCO-23

CCO-23 Series TYPE	FREQUENCY RANGE	STABILITY (After One Hour)			AGING CHARACTERISTICS		OUTPUT WAVE SHAPE	OUTPUT (rms) WITH LOAD (ohms)	OSCILLATOR VOLTAGE	OVEN VOLTAG
		Short Term (10 sec)	Fixed Ambient (25°C ± 5°C)	Ambient Range (0° - 50°C)	24-hour Period (After 72 hours)	One Week (After 72 hours)				
CCO-23MD-7	1 MHz	5×10^{-10}	5×10^{-9}	2×10^{-8}	5×10^{-9}	2×10^{-8}	Sine	1 volt-1500	27 VDC	27 VD
CCO-23MD-6H	1 MHz	3×10^{-10}	3×10^{-9}	$\pm 1 \times 10^{-8}$	3×10^{-9}	2×10^{-8}	Sine	1 volt-500	27 VDC	27 VD
CCO-23LD-H	5 MHz	3×10^{-10}	3×10^{-9}	$\pm 1 \times 10^{-8}$	3×10^{-9}	2×10^{-8}	Sine	1 volt-1500	27 VDC	27 VD

The CCO-23 series offers a choice of 3 ultra stable time base oscillators for premium performance. Special glass seal quartz crystals are designed for high Q characteristics and are processed to assure low aging needed in sophisticat applications. All models incorporate full proportional temperature control ovens and solid state circuitry.

CCO-7

CCO-7 Series MODEL	FREQUENCY RANGE	STABILITY — AMBIENT		OUTPUT VOLTS rms
		25°C	0-60°C	
CCO-7R	10-14 kHz	5×10^{-7}	$\pm 2 \times 10^{-6}$	1.5
CCO-7R	14-35 kHz	3×10^{-7}	$\pm 5 \times 10^{-7}$	1.5
CCO-7R	35-198 kHz	2×10^{-7}	$\pm 4 \times 10^{-7}$	1.5
CCO-7R	198-300 kHz	1×10^{-7}	$\pm 1.5 \times 10^{-7}$	1.0
CCO-7M	.95-3.0 MHz	1×10^{-8}	$\pm 3 \times 10^{-8}$	1.0
CCO-7L	3-8 MHz	1×10^{-8}	$\pm 3 \times 10^{-8}$	0.5
CCO-7N	8-15 MHz	1×10^{-7}	$\pm 3 \times 10^{-7}$	1.5
CCO-7V	15-50 MHz	2×10^{-7}	$\pm 5 \times 10^{-7}$	0.5
CCO-7U	50-100 MHz	2×10^{-7}	$\pm 5 \times 10^{-7}$	0.5

Standard models in this series are supplied with glass sealed crystals for low long term aging. All models have sol state oscillators designed for operation on 27 VDC. Mercury thermostat ovens may be specified for 115 VAC or 27 VD operation. Standard output is clipped sine wave with ratings as shown above based on 1500 ohm load conditions.

CCO-25

CCO-25 Series TYPE	FREQUENCY RANGE	STABILITY — AMBIENT		OUTPUT INTO 1500 OHMS	AGING/WK AFTER 72 HRS. Specify Aging Option	
		25°C	0-60°C		Standard	Special
CCO-25MD	1-3 MHz	5×10^{-8}	$\pm 5 \times 10^{-7}$	1v	1×10^{-7}	3×10^{-8}
CCO-25LD	3-8 MHz	5×10^{-8}	$\pm 5 \times 10^{-7}$	1v	1×10^{-7}	3×10^{-8}
CCO-25ND	8-15 MHz	1×10^{-7}	$\pm 5 \times 10^{-7}$	1v	2×10^{-7}	5×10^{-8}
CCO-25VD	15-50 MHz	2×10^{-7}	$\pm 5 \times 10^{-7}$	.5v	3×10^{-7}	1×10^{-7}
CCO-25UD	50-100 MHz	2×10^{-7}	$\pm 5 \times 10^{-7}$	.5v	4×10^{-7}	1×10^{-7}

This series is designed with proportional temperature control to meet high stability performance requirements in minimum size package for PC board mounting. Standard models have sine wave output and operate with 12 VD (oscillator) and 24 VDC (oven) supply.

CCO-78

CCO-78 Series MODEL	FREQUENCY RANGE	STABILITY — AMBIENT		OUTPUT VOLTS rms
		25°C	0-60°C	
CCO-78R	10-14 kHz	5×10^{-7}	$\pm 2 \times 10^{-6}$	1.5
CCO-78R	14-35 kHz	3×10^{-7}	$\pm 5 \times 10^{-7}$	1.5
CCO-78R	35-60 kHz	2×10^{-7}	$\pm 4 \times 10^{-7}$	1.5
CCO-78R	60-198 kHz	2×10^{-7}	$\pm 4 \times 10^{-7}$	1.5
CCO-78R-2	198-500 kHz	1×10^{-7}	$\pm 1.5 \times 10^{-7}$	1.0
CCO-78M	.80-3.0 MHz	1×10^{-8}	$\pm 3 \times 10^{-8}$	1.0
CCO-78L	3.0-8.0 MHz	1×10^{-8}	$\pm 3 \times 10^{-8}$	.75
CCO-78N	8.0-15.0 MHz	5×10^{-8}	$\pm 8 \times 10^{-8}$	1.0
CCO-78V	15.0-50 MHz	1×10^{-7}	$\pm 2 \times 10^{-7}$	1.0
CCO-78U	50-100 MHz	2×10^{-7}	$\pm 4 \times 10^{-7}$	.75

Standard models in this series incorporate solid state proportional temperature control which may be specified fo 115 VAC or 27 VDC operation with 5% regulation. Solid state oscillator circuitry is designed to operate on 27 VD (1% regulation) supply with sine wave output ratings shown for 1500 ohm load conditions.

TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS

TCO Series

TCCO-26 Series RANGE 1-20 MHz	FREQUENCY STABILITY WITH TEMPERATURE DEVIATION	
TCCO-26	$\pm 1 \times 10^{-6}$	0-50°C
TCCO-26-1	$\pm 5 \times 10^{-7}$	0-50°C
TCCO-26-2	$\pm 2 \times 10^{-6}$	—20 to +70°C
TCCO-26-3	$\pm 5 \times 10^{-7}$	—20 to +70°C
TCCO-26-4	$\pm 1 \times 10^{-6}$	—40 to +70°C

FREQUENCY STABILITY WITH TIME		
24 Hour Period	5×10^{-8} Max. with Ambient Temp. 25°C	
After 72 Hours Continuous Operation	1×10^{-7}/wk.	1-10 MHz
	2×10^{-7}/wk.	10-20 MHz

TCCO is the Bliley acronym for TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS designed to integrate the characteristics of high quality crystals with temperature compensated circuitry for improved frequency stability without temperature control. Typical performance characteristics are shown for the TCCO-26 series. Standard models operate on 12 VDC (2% regulation) at 15 mils maximum. Sine wave output is 1 volt rms into 1000 ohms or 2 volts peak to peak square wave on special order.

All models are designed for operation on +5 Vdc. Logic output models have amplitude needed to drive normal DTL and TTL circuitry. Type CMO-26 and CMO-3 are hermetically sealed and Type CMO-26 is available as custom option, with mechanical or electrical trim adjustment. The CMO-31 is available with dual complementary output as custom option. Specify CMO-32 for use with 14 pin DIP sockets or CMO-33 for use with 24 pin DIP sockets.

CKO Series

CKO Series — FREQUENCY TOLERANCE		
SPECIFY	DEVIATION	AMBIENT RANGE
A or B	±10 ppm	0° to 50°C
	±20 ppm	—40° to +70°C

STANDARD MODELS		
SPECIFY TYPE	FREQUENCY kHz	OUTPUT WAVEFORM
CKO-4A	200-5000	Logic
CKO-4B	200-5000	Square Wave
CKO-3	3000-15000	Sine Wave

THIS IS AN ULTRA COMPACT LOW PROFILE CRYSTAL OSCILLATOR designed to provide choice of LOGIC output for IC applications where space is limited. The koldweld sealed package operates on 5 VDC with output ratings as shown above. When specified, electrical trim adjustment is available to offset long term aging.

CRYSTAL FILTERS

BLILEY CRYSTAL FILTERS are custom engineered devices that may be supplied with a wide variety of characteristics over the frequency range in which quartz crystal resonators can be produced. With over forty years of experience in the design and manufacture of quartz crystal resonators, Bliley offers a unique combination of crystal technology and filter design capability for your custom applications.

Table I is presented as a general guide in determining bandwidth limits for various segments of the frequency range. Selectivity (the ratio of 60 db bandwidth to 6 db bandwidth) is generally a compromise between desired performance and economics. Typical selectivity is 2, with requirements of 1.5 not uncommon. Passband ripple, for narrow band filters, is normally 0.3 db with 1 db maximum over the temperature range —55° to +90°C. Wide band filters typically exhibit 0.5 db ripple and very wide passbands may exhibit 2 db ripple at temperature extremes.

TABLE 1 Range kHz	Bandwidth % at 6 db Min.	Max.
100-250	.05	6
200-400	.04	5
300-600	.035	5
1000-5000	.01	2
5000-20000	.02	2
20000-30000	.03	1

The following listing presents a sample of typical Bliley filters showing performance characteristics that have been established. Our design range covers Butterworth, Gaussian (linear phase), Chebyshev, band reject, and comb sets including contiguous comb sets.

TABLE 2 Type No.	Center Frequency	Bandwidth (6 db)	Bandwidth (60 db)	Maximum Insertion Loss	Nominal Impedance (ohms)	Case Size L x W x H (in.)
BFN-0018B21	18.75 kHz	20 Hz	250 Hz	3 db	27 k	3½ x 1 17/32 x 1 5/16

CRYSTAL FILTERS

FILTER COMB SETS

Contiguous or spaced filter comb sets for use in Doppler or airborne radar systems for the frequency range from 80 kHz to 20 MHz.

Typical contiguous filter bank for 50 filter units:

Center Frequency:	from 300,000 Hz to 304,900 Hz at 100 Hz intervals
3 db Bandwidth:	100 Hz
30 db Bandwidth:	700 Hz
Impedance in and out:	8k ohms
Insertion Loss:	3 db maximum
Ripple:	0.5 db maximum

TYPICAL SINGLE SIDEBAND FILTERS

Type	Carrier Frequency	Carrier Attenuation	Sideband Attenuation	Bandwidth (3 db)	Max. Insertion Loss	Nominal Impedance (ohms)	Case Size (L x W x H in.)
TN-0100U22	100 kHz	20 db	60 db at −300 Hz	+300 to +6000 Hz	10 db	8.2k	5⅜ x 3 x 2½
TN-1650U21	1650 kHz	50 db	65 db at −200 Hz	+300 to +3000 Hz	3 db	12k	3 5/64 x 1 7/16 x 1½
TN-1750L21	1750 kHz	25 db	50 db at +250 Hz	−250 to −2500 Hz	3 db	12k	2 9/16 x 1 5/16 x 1 5/16
TN-9000U21	9000 kHz	25 db	60 db at −500 Hz	+300 to +3300 Hz	3 db	600	2⅜ x 1 x 1

MONOLITHIC CRYSTAL FILTERS

A monolithic filter consists of a quartz wafer with pairs of metal electrodes deposited on its major surfaces. These miniature devices are available in koldweld sealed cases such as TO-5, TO-8 and flatpack configurations.

Two and three pole monolithic designs are currently available for use as single filters or in cascade combinations. Bandwidths in the range of 0.01% to 0.1% are obtainable with reasonable economy at the present design level for center frequencies in the range 5 MHz to 20 MHz. Bliley monolithics can be supplied with Butterworth, Chebyshev, Gaussian or other characteristics to meet your requirements.

CRYSTAL DISCRIMINATORS

Crystal discriminators are readily available in a wide range of frequencies and exhibit many of the advantages of other quartz crystal products; namely, frequency stability with time and temperature, ability to withstand severe environmental conditions, and compact size. Typical characteristics are shown in following tabulation.

Type	Frequency	Peak-Peak Bandwidth (min.)	Linearity	Impedance (ohms)		Case Size (L x W x H in.)
				Source	Load	
BDN-11D21	10.7 MHz	5 kHz	4% ± 1 kHz	1k	100k	1¾ x 1¼ x ½
BDN-11D22	10.7 MHz	50 kHz	4% ± 10 kHz	10k	100k	1⅛ x 1⅛ x ¾
BDN-11D23	11.5 MHz	50 kHz	4% ± 10 kHz	390	100k	1¾ x 1¼ x ½
BDN-21D21	21.4 MHz	30 kHz	4% ± 6 kHz	500	100k	1⅛ x 1⅛ x ¾
BDN-21D23	21.4 MHz	80 kHz	10% ± 25 kHz	500	100k	1⅛ x 1⅛ x ¾

CRYSTALS

Koldweld Sealed Crystal Holders for High Reliability

This group of crystal holders is hermetically sealed by a koldweld process, without heat or flux, to minimize contamination. Crystal units supplied in these enclosures have improved aging and reliability. All units are custom built to your specifications. Data sheets for each type are available on request.

KOLDWELD SERIES

HIGH PRECISION GLASS-ENCAPSULATED CRYSTALS

Covering a frequency range of 5,000 Hz thru 150 MHz, Bulova has available in glass holders the Mil types HC-26/U and HC-27/U, as well as the standard vacuum tube types. A 3rd overtone 5 MHz crystal is available in the HC-27/U holder with Q's in excess of 1 million and stability of 1 pp 10^{10} for 24 hours.

FILTER AND OSCILLATOR CRYSTAL

Bulova has designed a line of quartz crystals ranging in fundamental frequencies of 2,000 Hz thru 30 MHz—overtone frequencies to 150 MHz. Custom capability enables us to design to fit your most exacting requirements.

- Spurious attenuation as low as 80 db.
- Motional parameters of L, and C, held to within ±2%.

A COMPLETE LINE FOR ALL APPLICATIONS IN A FREQUENCY RA OF 2,000 Hz THRU 150 MHz

Commercial: Crystals for Aviation, Marine and CB communications e ment. Manufactured to the highest quality in standard holders or modified to suit special designs.

Military: Bulova produces all the standard military "CR" types Q.P.L. on most of the current "CR" types. Designs cryst new military applications where low power and ex environment are present.

Coldweld Sealed Crystals—

Bulova has extended the developmental perimeter of col types to provide a more miniaturized package with a br frequency output. A support facility has been built capa handling volume production. Series 100 coldweld h consists of nine (9) configurations which include the fo main military types. The military crystals fit within the sional requirements of the military drawing.

Features:

- High Quality-High Reliability
- Tolerances as close as 3 ppm of nominal can be h initial adjustment.
- Aging rates of 3 pp 10^8 per week are standard.
- Small package/broad frequency capability.

CRYSTAL HOLDERS

MIL TYPE	BULOVA TYPE	DIMENSIONS IN INCHES

BULOVA TEMPERATURE CONTROLLERS/OVENS

A wiae selection of temperature control devices and enclosures . . . compact—highly versatile

id Site Controllers:

339 Transistat 184 Transistat 320 Conax

ailable as AC Switches, DC Switches or portional Controllers, they are designed to handle power requirements of little as .4 watt to 3KW. Package sizes as small as .5 cubic inches are available; temperature control as close .01C, dependent on application.

	Type 184-115 184-26	Type 339	Type 320-115* 320-26
Voltage	20VAC to 125VAC 60 to 400 cps	115VAC 400 cps	20VAC to 125VAC 60 to 400 cps
Peak Heater Current	1.5 amp. (Half Wave)	1 amp. cont. 1.5 amp. 50% Duty Cycle	1.5 amp. (Half Wave)
Set Temperature Range	Any Temperature, 5° intervals, −55°C to +125°C		
Temperature Stability Over Ambient	.1°C	.1°C	.75°C
R.F.I.	none	Mil I 26-600	none
Ambient Operating	−55°C to +125°C		
Vibration	Mil Std. 202 Method 204D		none
Shock	Mil Std. 202 Method 202		none
Size	.625 Dia. .437 Hgt.	1.390 x 1.075 .380 Hgt.	1.250 Sq. .380 Hgt.

*Commercial

ystal and Component Ovens:

341

613

BHC-18-2

ystal ovens are available to hold from ing crystal to 15 crystals; component ens are available up to 50 cubic inches. any ovens are available with either -metal thermostats or solid state control.

	BHC-18 Series	BHC-613 Series	COM-341 Typical Large Cavity Oven
Accomod.:	1-15, HC-18 or HC-25 crystal holders	Single HC-6 crystal holder to small printed circuit board	Up to 50 cubic inches
Oper. Volt:	To 28 VDC or 115 VAC dependent on controller		
Temp. Set:	5° intervals +55°C to +100°C		
Controls Available:	Bi metal or solid state	Bi metal, solid state or mercury	
Stability:	Up to ±.5°C	Up to ±.01°C	Up to ±.1°C
Mounting:	Flange, bracket or stud	Flange, octal plug or stud	
Termination:	N/A	To 15 pins	To 20 pins

BULOVA CRYSTAL FILTERS

Computer Designed for Reliable Performan Accurate — 4KHz to 150MHz

The business of Crystal Filter design and production has been Bulova's business sinc It is another reason for our leadership in the broad area of frequency control and relat cision products.

We are a design/production center to fulfill the most exacting system specifications. Co many years of experience, an engineering team of many design disciplines and a computer techniques, we can produce 'state-of-the-art' filters in cost-controlled pack military and commercial specifications.

TYPICAL FILTER APPLICATIONS FROM

4KHz ← * → 15

Band Pass	Notch
Band Elimination	Time Delay
Single Side Band	Equalizer
Narrow Band	Lerner
Wide Band	Time Domain
Linear Phase	
RF & IF	Discriminators

*For areas not specified above, consult our application engineering department.

COMPUTER OPTIMIZED FILTER DESIGNS

To provide optimized designs for individual system requirements, Bulova has a co-related library of computer programs. From pre-packaging tolerance analysis of individual components to the finished product spec'd to the customer's parameters, we can determine design "trade-off" quickly and economically.

The prime parameters have been programmed to make available the following crystal filter types

1. Butterworth Designs
2. Butterworth-Thompson Designs
3. Chebyshev Designs
4. Bessel Designs
5. Elyptic Designs
6. Lerner Designs
7. Gaussian (Transitional)
8. Image Parameter

FULL PRODUCTION CAPABILITY

From crystal configuration to finished product, each segment of manufacture utilizes the most advanced and controlled production techniques. Geared to large volume requirements, Bulova's modern automated test facilities allows for a mass production output with no loss in quality—fully equipped environmental laboratory available for most testing. Short runs and engineering prototypes are handled in our pre-production shop.

CUSTOM DESIGNED TO THESE POSSIBLE PARAMETERS:

Band Widths	from .001% to 8% of Center frequency
Shape Factor:	1.08 Ratio for 60 db BW to 3 db BW
Ripple Factor	<0.5 db
Phase Linearity	<5%
Carrier Rejection	>70 db
Ringing	>40 db
Insertion Loss	<3 db
Attenuation	>100 db
Phase Matching	closer than 3° (Filter to Filter) over environmental
Temperature Tolerances	<0.005% (depending upon frequency)
Max. Operating Temperature Range	−55°C to +125°C
Shock & Vibration	All applicable MIL specifications

BULOVA LC FILTERS

Computer Designed for Maximum Performance—To Your Spec—DC to 80MHz

n Time/frequency product design, Bulova
oped a diversified L C Filter product line
ures • Computer programmed perform-
acteristics • Competitive pricing • Custom
ophistication • High-use, long-life relia-

ng effort in L C filter design for the selec-
shaping of frequencies has culminated in
lopment of a unique series of filters,
ly engineered for spectrum analysers.

With Excellent Factor

uency filters with 45db/3db shape factors
1.5/1 and 2.3/1. They are designed to
between 100 ohm impedances and ex-
llent temperature stability.

Filters

such applications as spectrum analysis and
e as standard items in contiguous banks
Hz to 10 MHz.

IRIG BANDPASS FILTERS—Available from 400 Hz to 165 kHz with attenuation at ±7.5% of center frequency within 3 db in 21 channels. Eight other standard channels are available in frequency from 22 kHz to 165 kHz at ±15% 3 db points.

IRIG LOW PASS FILTERS—Low Pass and Linear Phase Low Pass filters are available in IRIG frequencies. The low pass are intended to attenuate the 2nd and higher harmonics of the incoming signal. Bulova's linear phase low pass filters attenuate the higher harmonics and provide minimum phase distortion and therefore low transient response. These filters are for 10k ohms terminating impedances.

TONE CHANNEL FILTERS—Designed for data transmission systems, Bulova offers a wide selection of special (and standard) tone filters (band pass and low pass) featuring high stability, small package size, a wide variety of center frequencies and shape factors, phase linearity, etc. Range: 10 Hz to 10 kHz; Stability: better than .1%; Bandwidth: as narrow as 1% can be supplied.

DISCRIMINATOR TRANSFORMERS—Employing stable, high-Q components, Bulova Discriminator Transformers perform with an excellent stability and exceptional amplification and linearity.

BAND REJECT FILTERS—Some of the outstanding features of Bulova LC Band Reject Filters are their high discrimination and stability. This type of filter is available in a wide range of frequencies and shape factors . . . Bulova also specializes in LC and RC Notch Filters.

LUMPED CONSTANT DELAY LINES—Bulova custom designs Delay Lines to cover any practical impedance range. Keeping physical dimensions at a minimum, these networks feature low signal attenuation, excellent thermal stability, low pulse distortion and extended band width, achieving high delay-to-rise-time ratio.

EQUALIZERS—Maintaining narrow tolerances, a wide selection of custom designed Amplitude and Phase (Delay) Equalizers have been developed to be used with transmission lines, amplifier networks etc. Bulova's engineering staff is always available to consult with you on design problems. Additional information on all networks is available upon request.

NTERSTAGE FILTERS—60 Hz to 20 kHz

Low Pass
Available up to 30 MHz

High Pass
Available in impedance from 50 ohms to 10 K ohms

Band Pass
Standard filters available with 600 ohm and 10 K ohm terminations. All have provision for terminating into grid circuit.

BULOVA CRYSTAL OSCILLATORS

- State-of-the-Art TCXO's in Production Quantities
- Computer Designed for Maximum Performance
- Total Capability from Custom Engineering to Volume Production

HIGH STABILITY CRYSTAL OSCILLATOR

The high frequency stability of these oscillators results from housing a high precision crystal and an oscillator circuit with AGC to maintain low constant crystal drive in a stable DC proportional control oven.

Features: Plug-in oscillator with stud mounting ● Frequency trimming provided by a screwdriver adjustment.

TEMPERATURE COMPENSATED CRYSTAL OSCILLATORS

TCXO-1

TCXO-5

Bulova temperature compensated crystal oscillators employ a computer selected and optimized variable capacitance diode and thermistor compensation network to maintain frequency stability over wide temperature ranges, without the use of an oven. They are designed for use in aerospace, military, and industrial applications where power, space and weight restrictions preclude the use of an oven for temperature stabilization.

Features: ● No warmup time, due to elimination of oven ● Low power consumption sealed crystal holder to minimize aging and ensure long life ● Self-contained voltage ● All components derated for long life and high reliability ● Hermetically sealed

BULOVA FORK OSCILLATORS/RESONATORS

- From 100 KHz to 1 Cps
- Accuracies up to ±.002%
- Units compatible with logic circuitry available
- Multi frequency units available
- Unique capability to meet special custom requirements

Whatever your requirements for tuning forks and oscillators, Bulova has either the product available or the inherent capability to meet your need. Reliability, accuracy and size criteria can be quickly met, with appreciable savings in engineering time and production costs. Each product is founded on the same design experience that has made the ACCUTRON a by-word of precision and accuracy.

PRECISION OSCILLATORS

OSCILLATORS FOR IC SYSTEMS

CRYSTAL CONTROLLED OSCILLATORS

These crystal oscillators are designed primarily for use with I.C. systems and are completely compatible with Series "930" as well as o devices. Priced equal to or lower than their larger equivalents, they provide low output frequencies with true crystal accuracy. Their o is silent and the output frequency is not affected by mounting position or variation in "G" forces. A total of eight different Models prov frequency accuracies and five temperature ranges as shown in the table below. The cost of a unit is determined by the frequency a temperature range, and output frequency desired.

MODEL IC5A1

Square Wave Model	Sine Wave Model	Frequency Accuracy	Temperature Range	
			Degrees C	Degrees F
IC5A1	IC5A2	±.002%	+20 to +40	+68 to +104
IC5B1	IC5B2	±.005%	0 to +50	+32 to +122
IC5C1	IC5C2	±.005%	0 to +65	+32 to +149
IC5D1	IC5D2	±.01%	0 to +65	+32 to +149
IC5E1	IC5E2	±.01%	−25 to +70	−13 to +158
IC5F1	IC5F2	±.02%	−25 to +70	−13 to +158
IC5G1	IC5G2	±.02%	−55 to +70	−67 to +158
IC5H1	IC5H2	±.05%	−55 to +70	−67 to +158

Output Waveform:	Square Wave Duty Cycle 50% Rise Time <50ns	Sine Wave Distortion <
Frequencies Available:	1.0Hz to 500kHz	50Hz to 500k
Output Amplitude:	Logic Zero, <0.4V Logic One, >2.4V	3Vrms nomina into 10kΩ
Supply Voltage:	5Vdc ±10%, 20ma to 100ma depe on frequency	
Termination:	Gold plated solder pins	

RC OSCILLATORS

These solid state RC oscillators are not effected by magnetic fields or severe mechanical vibration. Each unit is ag custom compensated over the operating temperature range. The pulse and square wave units are completely com with Series "930" IC devices. A 15 turn screwdriver adjustment is provided to allow setting to exact frequency. Term and mounting is by gold plated solder pins.

CROVEN CRYSTALS

leading the way to discovery

Tomorrow's scientific advancements depend on the technological skills applied today. Croven is consistently the supplier of crystals used in exploring new fields. We manufacture all quartz crystals including a complete line of the finest quality coldweld crystals. Croven's exceptional reliability and frequency stability has made us a preferred supplier. Croven crystals used in frequency control have met the highest specifications demanded for use in Canada's ISIS 1 and other space projects. Skilled hands at Croven help shape tomorrow's world.

Damon... the form-factor specialists in crystal filters, oscillators, monolithics.

Whatever your signal-shaping needs . . . from a narrow band-reject "spike" to a broad band-pass . . . you can rely on the form-factor specialists at Damon. Computer assisted custom designs. Production quantities. Frequency selection from 10 KHz to 75 MHz. Bandwidths from 10 Hz to 400 KHz. Competitive pricing. You name it. Damon will deliver it — on schedule. Here are five examples typical of Damon's broad capability in frequency control devices:

c Crystal Filters

Monolithic Filters utilize a rtz plate for multiple resona- e coupling medium between vantages over conventional ers include smaller size, supe- ty, and lower cost. Available variety of computer-assisted om Chebyshev to Gaussian stics and from 2 to 8 poles.

Center Frequency	3 - 30 MHz
3 dB Bandwidth	0.3 - 30 KHz
No. of Coupled Resonators	2 - 8
Insertion Loss	1 - 6 dB
Ripple	0.5 dB max
Terminations	50 ohms to 20 kilohms
Size	TO-5, TO-8, or Flat-Pack

s/Reject Crystal Filters

ariety of conventional crystal produced at Damon Engi- tandards designs such as But- Chebyshev, Gaussian, Bessel, ndre, as well as custom tai- gns are available.

RANGE OF PARAMETERS:

Center Frequency	10 KHz - 75 MHz
Bandwidth	.01% - 3% of C. F.
Phase Linearity	± 5%
Transient Overshoot	40 dB down
Shape Factor	down to 1.4:1
Differential Phase Shift	± 2°
Group Delay Uniformity	± 5%

ssi Crystal Filters

ssi Crystal Filters of either con- tion or monolithic design. Useful FM ommunications or radar sys- ns were flat time delay is required. a herent pulsed radar, it can nimi return-pulse overshoot. Elim- tes ging problems in swept spec- m alysis. Available in 2 to 6 pole signs

Center Frequency	
Conventional	100 KHz - 35 MHz
Monolithic	3 - 30 MHz
3 dB Bandwidth	100 Hz - 30 KHz
Shape Factor, 30 dB to 3 dB	3:1 to 7:1
Ringing, Pulse or Impulse	25 - 40 dB down
No. of Poles	
Conventional	2 - 6
Monolithic	2 - 4
Volume	
Conventional	1 - 6 cu. in.
Monolithic	0.016 - 0.4 cu. in.

CXO — 1 KHz to 500 MHz

amo VCXO's provide high stability er a road range of center frequen- es. A optional square wave or pulse tpu signal compatible with I. C. gic cuits is available.

Center Frequency	1 KHz to 500 MHz
Deviation	.01% to 0.2% of Center Frequency
Linearity	1% to 2% of Peak Deviation
Frequency Stability	1% of Peak Deviation over 0° to 50°C temp. range

w Noise VCXO's

amo low noise miniaturized VCXO's e al solid state quartz crystal stable cill rs whose frequencies can be ried inearly by an external DC or C mulating signal. Only a source of owe nd control signal are required . no uxiliary compensating circuitry.

TYPICAL CHARACTERISTICS:

Center Frequency	10.000 MHz ± 1 KHz
Deviation	± 10 KHz
Linearity	± 1%
Modulation Rate	Flat to 4 KHz
Output Power	>1 MW

GLASS, COLDWELD and METAL CAN CRYSTALS

Complete frequency range from 2kz to 200mHz with total QPL approval on nearly all Military crystals to Mil. 3098E. Precision glass and coldweld crystals for applications needing superior long term aging, maximum reliability and crystal Q. Aging rates of 5×10^{-10}/day now being achieved on precision time base crystals. Improved process techiniques provide for production of tight tolerance temperature crystals for use in Temperature Compensated Crystal Oscillators. (TCXO's)

COMPLETE FILTER CAPABILITY

L • 2 kHz to 100 mHz; Bandpass, Sideband, Rejection, Linear Phase
• dc to 150 mHz; Bandpass, Lowpass, Highpass, Rejection
ACTIVE • dc to 1 mHz; Bandpass, Lowpass, Highpass
RF COAXIAL • 100 mHz to 1 gHz; Bandpass, Lowpass, Highpass

HERMOSTATS/Snap Action

g life, expensive for commercial or Military application. Temperature range from 50°C to 95°C. Guaranteed for 100,000 cycles 10 amp resistive load.

Typical applications; temperature overload protectors for motors, relays, etc., household appliances such as electrical blankets, heaters, dryers, etc.

GITAL INSTRUMENTS

New!

perature instrumentation with high resolution and accuracy, optional readability and easy operation. Direct temperature control and/or readout from —60.0°C to +160.0°C or —76.0°F to +320.0°F. High accuracy is attributed to development of hole junction silicon sensor. Six standard probe designs available. Write for descriptive literature today.

GITAL CONTROLLER (erc 920)

Digitally adjusts to a resolution of 0.1°C for any temperature within its control range. Controls any size chamber where heaters do not exceed 3600 watts, (Display monitors changes in temperature). Zero cross-over switching prevents RFI. Automatic heat/cold operation with no external switching. Accurate temperature control.

GITAL THERMOMETER (erc 930)

Resolution of 0.1°C with accuracy of 0.6°C over temperature range of −60.0°C to 160.0°C. Ten input channels. Automatic polarity indicator with display memory. Direct digital display indicates temperature without conversion tables.

erc 920

erc 930

erc 935

erc 1050

DIGITAL THERMOMETER (erc 935)

Provides direct digital display of temperature when used with any digital voltmeter. Accuracy of 0.6°C, resolution 0.1°C. Interface to DVM is achieved by two leads or coaxial cable to input of DVM. Ten input channels.

DIGITAL TEMPERATURE CHAMBER (erc 1050)

Equipped with Model 920 Temperature Controller that provides automatic heat/cold control and display. Zero cross-over switching eliminates RFI. Laminar Air Flow technique essentially elimiates thermal gradience to ±0.5°C for any 50°C span. Removeable doors with options.

HOUSANDS OF FREQUENCIES FROM FORK STANDARDS, INC.

Precision Oscillators

ndards tuning fork and crystal oscillators provide racy outputs at frequencies from sub-audio through sizes range from miniature PC board-mount types to oven-stabilized frequency standards. Both square sine wave outputs are available.

orks are limited to frequencies up to about 15 kHz, generally preferred for low-frequency applications they require less frequency-division circuitry than alent crystal unit. A low-frequency tuning fork oscil- hus more compact, draws less current, and is usually less expensive and more reliable than a low-frequency crystal unit. However, for highest accuracy or for higher frequencies, crystals are preferred.

Accuracy and stability of both types of oscillators is a function of temperature; this is shown graphically on page 1442, along with descriptions of the various output options. The Fork Standards oscillators most often specified are summarized below and described in more detail on the following pages. An explanation of how they are specified also appears on page 1442.

MODEL G: Plug-in general purpose unit with very-low-frequency capability. Also available with studs and solder hooks.

MODEL FO: Very compact, designed for printed circuit board applications. Use where space is at a premium.

MODEL P: Larger printed circuit board unit than Model FO. Increased capabilities and slightly lower unit cost. Can be chassis mounted.

MODEL LO: Smallest oscillator available, with square wave output only. PC board mount.

MODEL R: Largest PC board mount model, with lowest case profile at sub-audio frequencies.

MODEL FR, LR: Tuning fork resonator in F or L case. For use where user provides oscillator circuitry, or as a highly selective audio filter element.

MODEL GQ: General-purpose plug-in crystal oscillator, with output frequencies down to .125 Hz. Can be supplied with studs and solder hooks:

MODEL UQ: Smallest crystal unit, designed for PC board mount. PC pins hold unit to board. Vernier frequency adjustment available.

MODEL PQ: General-purpose flat case unit for PC board or chassis mounting. Larger case volume than UQ.

MODEL RQ: Largest board-mounted crystal model, with lowest profile in sub-audio frequency range.

MODEL DQ: Available with either snap-action or proportional control oven, plug-in or stud-mounted base with solder hooks. Accuracy to .0001% over extreme temperatures.

TUNING FORK OSCILLATORS

Model	Frequency Range	Output	Height	Price

PLUG-IN OSCILLATOR G, G

With their convenient octal plug bases, the Models G and GQ designed for use in applications where space is not restr Either is also available with solder hooks and studs. Circuits u silicon semiconductors and cases are hermetically sealed, ass reliable operation under the most extreme environmental c tions. Most models can be supplied to meet MIL Spec requirem

Size: 1½" sq. x 2½" or 3½" h.
Weight: 4-7 oz. (120-210 gm), depending on frequency
Supply: 5 or 12 VDC standard; others available
Accuracy: (See Table, Page 1442, for detailed information)
Tuning Fork (Model G): to .005% (Classes 2-5)
Crystal (Model GQ): to .001% (Classes 6, 7)

OUTPUT/FREQUENCY RANGE

(Complete definitions on Page 1442)

OUTPUT / MODEL	SINE WAVE TYPE AA: 25 Hz up AT, DT: 200-20000 Hz	SQUARE WAVE TYPES B, BL, BN, BD (some restrictions above 1
G (Tuning Fork)	25-800 Hz, 3½" h. 800-15000 Hz, 2½" h.	.012-2 Hz, 3½" h. 2-15000 Hz, 2½" h.
GQ (Crystal)	25-800 Hz, 3½" h. 800 Hz-10 MHz, 2½" h.	.125-32 Mz, 3½" h. 32 Hz-10 MHz, 2½" h

MINIATURE OSCILLATOR FO, U

The Models FO and UQ occupy the least board area of any profile Fork Standards' oscillator. Typically the Model FO h lower profile at a given frequency, though either is capable of audio outputs.

Because of their compact size and rugged construction, models have seen use in various aerospace and military proj The Model FO is also available as a tuning fork resonator without driving circuits, as the Model FR.

Size: 1½" sq. x ⅜", .5" or .6" h.
Weight: 1.75 oz. (49 gm) max., either model
Supply: 5 VDC preferred; 12 VDC available only above 1000 Hz (FO) or 200 kHz (UQ)
Accuracy: (See Table, Page 1442, for detailed information)
Tuning Fork (Model FO): to .005% (Classes 2-5)
Crystal (Model UQ): to .001% (Classes 6, 7)

OUTPUT/FREQUENCY RANGE

(Complete definitions on Page 1442)

OUTPUT / MODEL	SINE WAVE TYPE AA only	SQUARE WAVE Types: B, BL, BN (some restrictions above 1
FO (Tuning Fork)	1000-15000 Hz, .5" h.	.25-250 Hz, .6" h. 250-15000 Hz, ⅜" h.
UQ (Crystal)	50 KHz-10 MHz, .6" h.	50 Hz-50 KHz, .6" h. 50 KHz-10 MHz, .5"

ULTRA-COMPACT OSCILLATOR LO

With a volume of less than ½ cubic inch, the Model LO is Standards' smallest model. It is rugged and reliable, and has extensive use in applications where space is at a premium.

Size: 1½" x ¾" x ⅜" h.
Weight: .66 oz. (17.5 gm)
Supply: 5 or 12 VDC (specify)

Frequency Range/Accuracy (See Table, Page 1442)
Accuracy: .05% (Class 2): 1000 to 15000 Hz.
Accuracy: to .01% (Class 3, 4): 1920 to 10000 Hz.
Output: Square wave (Type B) only

Fork Standards, Inc. • 213 Main Street, West Chicago, Illinois 60185 • (312) 231-3511

P, PQ

STANDARD BOARD–MOUNT OSCILLATOR

ze: 55" x 3.55" x 17/32" or 15/16" h.
eight: 3½ oz. (100 gm) max.
pply: 5 or 12 VDC standard
curacy: (See Table, Page 1442, for detailed information)
Tuning Fork (Model P): to .005% (Classes 2-5)
Crystal (Model PQ): to .001% (Classes 6, 7)

The Models P and PQ are general purpose flat package oscillators that can be printed circuit board or chassis mounted. Their nominal base area is economical of board space, which necessitates a rather high profile for lower frequency units.

OUTPUT/FREQUENCY RANGE

(Complete definitions on Page 1442)

OUTPUT / MODEL	SINE WAVE Type AA: 60 Hz up AT, DT: 120-20000 Hz	SQUARE WAVE TYPES B, BN, BL (some restrictions above 1 MHz)
P (Tuning Fork)	60-120 Hz, 15/16" h. 120-15000 Hz, 15/16" h.	.125 Hz-60 Hz, 15/16" h. 60 Hz-15 kHz, 17/32" h.
PQ (Crystal)	800-64000 Hz, 15/16" h. 64 kHz-10 MHz, 17/32" h.	100 Hz-32 kHz, 15/16" h. 32 kHz-10 MHz, 17/32" h.

R RQ

ULTRA LOW FREQUENCY OSCILLATOR

ze: 1/16" sq. x .6" or .85" h.
eight: 5 oz. (150 gm) max.
pply: 5 or 12 VDC standard
curacy: (See Table, page 1442, for detailed information)
Tuning Fork (Model R): to .005% (Classes 2-5)
Crystal (Model RQ): to .001% (Classes 6, 7)

With their large board area, the Models R and RQ have the lowest frequency capability of any printed circuit board mounted Fork Standards oscillator. Output options include both capacitor and transformer coupled sine waves as well as a variety of square wave types.

OUTPUT/FREQUENCY RANGE

(Complete definitions on Page 1442)

OUTPUT / MODEL	SINE WAVE TYPE AA: 20 Hz up AT, DT: 60-20000 Hz	SQUARE WAVE TYPES B, BN, BL (some restrictions above 1 MHz)
R (Tuning Fork)	20-120 Hz, .85" h. 120-15000 Hz, .85" h.	.25-15000 Hz, .6" h.
RQ (Crystal)	400-64000 Hz, .85" h. 64 kHz-10 MHz, .6" h.	.125-200 Hz, .85" h. 200 Hz-10 MHz, .6" h.

FR, LR

TUNING FORK RESONATOR

TONE SIGNALLING SYSTEM

cillator and matched tuning fork resonator pairs. Provide to 25 separate simultaneous control functions.

Tuning forks are highly selective audio frequency resonant elements, and thus are very useful in a variety of control and decoding applications. Two resonator configurations are available from Fork Standards; performance is identical so mounting considerations determine the choice.

Frequency Range/Accuracy: (See Table, Page 1442)
1000 - 1920 Hz: .05% (Class 2)
1920 - 15000 Hz: to .01% (Class 3, 4)

Coil Resistance (input and output):
1000 - 8000 Hz = 500 ohms
8000 - 15000 Hz = 130 ohms

Size:
FR: 1½" sq. x ⅜" h.
LR: 1½" x ¾" x ⅜" h.

Weight:
FR: 1 oz. (32 gm)
LR: .6 oz. (17.5 gm)

Fork Standards, Inc. • 213 Main Street, West Chicago, Illinois 60185 • (312) 231-3511

HIGH STABILITY CRYSTAL OSCILLATORS

DC

Low Drift Models (Class 7R)
Any Fork Standards crystal oscillator can be supplied with a premium cold-weld sealed, low-drift crystal. Minimum frequencies available are higher than those shown in the specifications for a standard unit; unit cost is higher.

Standard accuracies are:
.0005%, 10 to +60°C; .002%, −25 to +85°C.

To assure best long-term accuracy a Class 7R oscillator receives four weeks testing before shipment.

Oven-Stabilized Oscillators (Model DQ)
Oven stabilization is recommended for maximum stability over temperature extremes. Two types of oven are available from Fork Standards; snap action and mercury switch. Snap action ovens are less expensive and operate from either AC or DC; 22 to 115 V models are available. Mercury-switch models are DC only, in 6, 12, 24, or 28 V inputs. Howe mercury switch thermostat has a temperature hysteresi 1/10 that of the snap action type, providing best short stability.

Both types consume 10 VA (on); cases are 2″ square a high, with octal plug and hold-down studs.

Oscillators with proportional-control ovens are also ava Consult factory for further information.

SPECIFYING; ACCURACY VS TEMPERATURE

Specifying a Fork Standards Oscillator:
A Fork Standards specification number completely describes the oscillator to which it refers. Conversely, a specification number may be determined whenever an oscillator requirement is completely defined. The parameters required are:

1. Frequency
2. Accuracy
3. Temperature Range
4. Output Waveform
5. Supply Voltage
6. Case Size
7. Mounting and Terminals

The first step is to select a model that satisfies the output waveform requirement at the needed frequency. Then select the proper accuracy/temperature code from the table at the right. For example:

G - 3C - 4K - BL - 5
- 5 = 5 VDC Power Supply
- BL = Square Wave Output for Micrologic Drive
- 4K = 4 kHz Output Frequency
- 3C = .05% Accuracy, 0 - 65°C
- G = Model G Case

CLASS NUMBERS INDICATING OSCILLATOR ACCURACY VS. OPERATING TEMPERATU

TEMPERATURE RANGE

Accuracy (%)	+15° to +35° C	0° to +65° C	−25° to +65° C	−40° to +65° C	− +
.2	2A	2C	2F	2N	
.1	2A	2C	3F	3N	
.05	2A	3C	4F	4N	
.01	4A	5C	6F	6N	
.005	5A	6C	6F	7N	
.0025	6A	7C	7F	8N	
.001	7A	8C	8F	8N	
.0005	8A	8C	8F	8N	
.0001	9A	9C	9F	9N	

- ☐ Tuning fork, Classes 2-5
- ■ Crystal without oven, Classes 6-7
- ☐ Special crystal without oven. Accuracy .0005% from +10° to +60°C. Specify Class 7R.
- ▩ Crystal with oven, Classes 8-9. Specify Model DC

* Special oven unit. Consult factory.

STANDARD OUTPUTS

Most Fork Standards oscillators can be supplied with any of several standard outputs. Buffered outputs are available with most models. Transformer coupled sine wave, types AT or DT, can be provided with most tuning fork and Model GQ oscillators; minimum frequency is restricted.

The most popular output types (referenced to 12V supply) are:

Square Wave:
- **B:** 8 V p-p min. into 10 k ohm resistive load.
- **BN:** Same as B except rise time under 1 μs and equa metry from binary divider.
- **BB:** Same as BN except has two outputs, 180° out of
- **BL:** To drive micrologic. Specify manufacture and t

Sine Wave:
- **AA:** 3 V rms into 10 k ohm resistive load. Harmonic tion 1 to 10%, depending on frequency.
- **AT:** Like AA except transformer isolated output.
- **DT:** 1 mW into 600 ohms, transformer isolated.

Fork Standards, Inc. • 213 Main Street, West Chicago, Illinois 60185 • (312) 231-35

PRECISE FREQUENCY POWER INVERTERS

from FORK STANDARDS

- Line referenced counters
- Clocks
- Tape transports
- Facsimile machines
- Chart recorders
- Movie cameras

A precise frequency power source is a necessity if the power line is used as a frequency reference. Fork Standards' power sources use a precision crystal or tuning fork oscillator to control frequency, so frequency is independent of input or load.

The models described below are representative of Fork Standards' extensive experience in this field. A variety of models of the sizes shown or larger, both standard or custom designed, can be supplied to meet specific requirements.

LINEAR AMPLIFIER SERIES

ers table, low distortion sine wave power from unregulated AC lines.
quen accuracy determined by plug-in oscillator. Output regulated,
stat.
uts: 5-130/210-260 VAC, 50-1000 Hz
ut: ine wave, 0-125 VAC, 75 VA (standard), regulated
quen: 50, 60, or 400 Hz standard. 50-1000 Hz available. Also direct-
oupt sine wave as low as 10 Hz at reduced voltage
urac .1 to .005%
: 1⅛" x 8¼" x 5½" High; weight: 22 lbs.
ce:) Hz output) From $480.00

TAPE DECK SERIES

k nted, to power instrumentation tape transport in field applica-
ns. Spec construction, portable models available.
ut: 5-125 VAC, 55-65 Hz
tput: 15 VAC, sine wave, 60 VA
quey: 60 Hz, ±.01%, −55° to +85°C

) FREQUENCY, 400 VA INVERTER

For lab testing 60 Hz instruments on 50 Hz, and 50 Hz instruments on 60 Hz. Output frequency changed by switch on plug-in oscillator and changing output filter taps.

Input: 115/230 VAC, 50-400 Hz

Output: 115/230 VAC, sine wave, regulation 5% half to full load, 400 VA

Frequency: 50 or 60 Hz (switchable), .001% accuracy

CLOCK-MOTOR DRIVERS

Operating from a DC source, these square wave output units will drive a small synchronous motor at speeds accurate to .001% (less than one second per day error). The Model HCD has a transformer coupled, 115 V, 3 VA output to drive standard electric clocks. For higher power applications specify the Model HCD, 35 VA at 24 V p-p, center tapped, or a Model HMD, which has 115 V output at 35 to 100 VA.

SPECIFICATIONS

Model	LMD	HCD	HMD
Freq. Range	10-1000 Hz	40-1000 Hz	50-1000 Hz
Power	35 VA	3 VA	35-100 VA
Output Voltage	24 V p-p (C.T.)	115 V rms	115 V rms
Size	2" sq., 4" h.	2" sq., 4" h.	Various

VOLTAGE CONTROLLED OSCILLATORS

Through continuous research and specialization, Greenray Industries offers the most complete and advanced line of Frequency Standards and Oscillators in the industry.

P-201

L-C Voltage Controlled Oscillator—Stabilities of ±.2%. Frequency deviations as great as ±20%.

PH-229 & PH-230

L-C Voltage Controlled Oscillator—Proportional oven units offer stabilities of ±.001% and frequency deviations to ±10%.

NH-203A

Voltage Controlled Crystal Oscillator—Proportional oven unit for FM and phase locked loop applications.

NH-314

Voltage Controlled Crystal Oscillator—High frequency 60 MHz to 300 MHz.

Model No. and Type	Center Frequency Range	Maximum Range of Frequency Swing	Stability over Temp. Range (at a fixed frequency)	Temperature Range	Output Wave Form and Minimum Voltage	Input	Size	P 1-3
Q-200 R-C VCO	20 Hz to 100 kHz	±10% or ±30%	±.5% ±2%	0 to 50°C −40°C to +60°C	Pulse, Square or Sine	+28V D.C.	2" x 2" x 4" high	$275 $375
P-200 L-C VCO	1 kHz to 99.99 kHz	±1% or ±4%	±.5% ±1%	0 to 50°C −40°C to +70°C	Sine 2V RMS	+28V D.C.	1¾" dia. x 3⅝" high	$489

N-330 VCXO	50 kHz to 250 kHz	±1% ±.05%	±.01%/day	0 to +60°C	Square to drive T²L micrologic	+5V D.C.	2 9/16" x 2 15/16" x ⅞"	$545
N-331 VCXO	250.1 kHz to 999 kHz	±.1% ±.05%	±.01%/day	0 to +60°C	Square to drive T²L micrologic	+5V D.C.	2 9/16" x 2 15/16" x ⅞"	$475
N-332 VCXO	1 MHz to 25 MHz	±.1% ±.05%	±.01%/day	0 to +60°C	Square to drive T²L micrologic	+5V D.C.	2 9/16" x 2 15/16" x ⅞"	$385
NH-203A VCXO	1 MHz to 60 MHz LOW NOISE	±.01% or ±.05% or ±.1%	±.0001%	0 to 50°C	Sine 1 Milliwatt into 50 ohms	+28V D.C. for oscillator and proportional oven	2" x 2" x 4" high	$565 $645
NH-314 VCXO	60.1 MHz to 300 MHz LOW NOISE	±.01% ±.05% ±.1%	±.0005%/day	0°C to +50°C	Sine 1 mw into 50 ohms	+28V D.C. for oscillator and proportional oven	2¾" x 2¾" x 4⅝"	$748 $975
SH-219 Wide Band VCXO	500 kHz to 60 MHz LOW NOISE	±.25% or ±.5% or ±1%	±.001% ±.0025% ±.005%	0 to 50°C	Sine 1 Milliwatt into 50 ohms	+28V D.C. for oscillator and proportional oven	2¾" x 2¾" x 4⅝" high	$975 $145

Typical control voltage input: 2V RMS up to 15 kHz rate or ±3V D.C. for full modulation at 1000 ohm input impedance.—**Standard modifications available.**

NEW
N-330, N-331 & N-332

Voltage Controlled Crystal Oscillator—Designed to direct-drive all popular types of micrologic. 25 nanosecond maximum rise and fall time.

N-201

Voltage Controlled Crystal Oscillator—Nonoven unit available in flat pack or plug-in construction. Very popular.

SH-219

Wide Band Voltage Controlled Crystal Oscillator — Uses special techniques for ±1% frequency deviation.

1 MHz to 10 MHz LOW NOISE	$\pm 1 \times 10^{-9}$	+20°C to +55°C	Sine 1V RMS	28V D.C. for oscillator & proportional oven	2¾" x 2¾" x 4⅝" H	$770.00
5 MHz to 50 MHz	±.0001%	0°C to +55°C	Sine 1V RMS	28V D.C. for oscillator & oven	2 9/16" x 2 15/16" x 3 1/16" deep	$490.00 for 10 channels
10kHz to 30 MHz	$\pm 4 \times 10^{-6}$	0°C to +50°C	Square 0 to 6V P to drive micrologic	+5V D.C.	1" x 2" x ½" H	$209.00 to $339.00
3 MHz to 30 MHz	$\pm 4 \times 10^{-6}$	0°C to +50°C	Sine 2V PK-PK	+5V D.C.	1" x 1" x ½" H	$169.00
12 MHz to 600 MHz	$\pm 5 \times 10^{-6}$	−10°C to +60°C	Sine 1 MW	+28V D.C.	1½" x 1½" x 3¾" H	$204.50 to $520.00
3 MHz to 30 MHz	±.005%	−40°C to +70°C	.22V RMS	+3 to +12V D.C.	½" x ½" x 1 1/16"	$119.00 to $149.00
1 MHz to 10 MHz	$\pm 1 \times 10^{-8}$	0°C to +55°C	1V RMS	+28V D.C. for oscillator & proportional oven	2¼" x 2¼" x 4¼" H	$489.00
5 MHz to 75 MHz	$\pm 5 \times 10^{-7}$	+10°C to +50°C	1 MW	+28V D.C. for oscillator & proportional oven	3 5/16" W x 3⅞" x 4" D	$890.00

L-217

L-C Oscillators for printed circuit board mounting. Ideal where an AUDIO TONE or an RF signal is required. Used widely in test equipment.

313100A

General Purpose Oscillator—Crystal controlled. For very low frequency, high stability requirements.

Y-367

Crystal Oscillators for printed circuit mounting—3 kHz to 150 MHz.

28100, Y-656 & Y-657

Crystal Oscillators for general application with excellent stability. 800 Hz to 600 MHz.

Y283-3

Crystal Oscillators—designed to direct-drive all popular types of micrologic.

T-224

ture Compensated Crystal **illators**—High stability over **nperature range. No Oven** **atures instant warm-up.**

356000C

Frequency Standard—Ultra stable. Uses proportional type oven.

±1 part in 10^9

228200C

Multiple Channel Crystal Oscillator—Up to 20 output frequencies in the 5 MHz – 50 MHz Range (Rotary Switch Selection).

YH-320

Frequency Standard—Low noise, for printed circuit board mounting.

Greenray Industries, Inc.

840 West Church Road, Mechanicsburg, Pa.

Phone — (Area Code 717) 766-0223

Leaders in Precision Temperature Control for the Electronics Indust

NEW for the 70's!

TempMonitor

INDICATE-CONTROL-DELAY

These are just some of the jobs that can be done with Oven Industries exclusive **TempMonitor** circuit. In the model 7427 oven below, the **TempMonitor** produces a visual indication if the internal temperature is above or below the specified control point.

Latching or non-latching outputs allow **TempMonitor** to delay application of power until your components are in their operating temperature range, shut down in event of excessive heat rise, etc. **TempMonitors** with multiple set points as close as 0.1°C are available as an option on all new ovens.

Designed to house plug-in printed circuit boards, the Model 7427 provides the stable environment necessary for critical circuits.

The 7427 can be modified to accommodate up to ten 4 1/2" x 5" plug-in boards.

MODEL 7427

NEW for the 70's!

THE SILENT ONE

Sock him with 40 G's and he doesn't say a word. Hit his inp terminals with 50 to 600 Hz and he never protests. You expect him to ask for novocaine when you fill his cavity wi 3 1/2 watts.

He doesn't - he just sits there, quietly keeping his inside at 75° ± 0.15°. That's pretty darned good for a guy his siz But -

Why is he so quiet?

Because we knew you might be offended by words li "RFI", "Mechanical Resonance", etc. So we built him tou enough to take the roughest treatment - and sealed his li forever with a noiseless AC control circuit.

SPECIFICATIONS

Cavity size (ID): 3.7" x 5.1" x 3.0"
Case Size (OD): 4.7" x 6.1" x 5.2"
Cavity set temperature: 75°C
Stability: ± 0.15°C over an ambient range of 0°C to 50°C
Cavity Load: 3.5 watts
Warm-up time: 30 minutes at 20°C ambient
Price: 1-3 units, $390

MODEL 7297-1

A NEW KIND OF PACKAGE DEAL!

We can't call it insulation. Sure, it makes other insulators look like fish nets. That means you get faster warm-up and lower pow consumption. But it's more than just a super-insulation.

We can't call it an oven either, even though it regulates temperature as well as an oven. You see, this stuff doesn't take any space. Well, hardly any. A form-fitting temperature - stabilizer should be called something grander than "oven".

We call it **ThermoWrap**

TAKE YOUR COMPONENT -
THERMOWRAP IT -
ADD COVER -
AND CONNECT TO ANY OF OUR REMOTELY LOCATED CONTROLLERS (SEE OUR AD-EEM SEC. 5300)

EASILY DESIGNED AND PRODUCED TO FIT YOUR EXACT NEEDS,
ThermoWrap *IS AVAILABLE NOW. WHY NOT ASK US ABOUT IT?*

NOW! A CRYSTAL OVEN WITH AC DIGIPROP* CONTROL

WILL ACCEPT 2 HC-6/U CRYSTALS

MODEL 5169

Cavity Size: (ID) .962 Dia. x 2.330
Case Size: (OD) 1.297 Dia. x 2.330
Cavity Temperature: Selectable from 55°C to 85°C ±2°C setting tolerance
Cavity Temperature Stability: .5°C over 0°C to within 15°C of Cavity set temperature. ±.15°C at any fixed ambient (±.5°C)
Input Voltage Range: 28—135 VAC ±10%
Max Power: 10 W
Warm-up Time: 15 mins. from 0°C
Header: 8 Pin Octal
Price: 1-3 units $118.00 each

*Digital Proportional

WHAT ARE YOUR REQUIREMENTS?

Oven Industries is the world leader in custom-designed ovens. In many cases one of thousands of our standard designs can be modified in thermal electrical, or physical spe cations to suit your requirements. Typical of this is the 3157 series, designed to acce PC board and components.

MODEL 3157

MODEL NO.	STABILITY	AMBIENT RANGE	PRICE, 1-3
3157-3	±0.5°C	0°C to +50°C	$154
3157-4		−55°C to +50°C	170
3157-5	±0.25°C	0°C to +50°C	162
3157-6		−55°C to +50°C	186
3157-7	±0.2°C	0°C to +50°C	178
3157-8		−25°C to +50°C	194
3157-9	±0.1°C	0°C to +50°C	202
3157-10		−10°C to +50°C	210

Cavity Size (ID): 0.7" x 2.2" x 2.2" **Case Size:** 1.9" x 3.0" x 3.5"
Input: 28VDC, 14 watts max.

Oven Industries specializes in the design and production of unique components oven meet exacting military or industrial specifications. May we offer you our services?

HUGHES

FREQUENCY CONTROL DEVICES

CRYSTAL FILTERS

s the nation's leading supplier of precision ystal filters, Hughes offers years of technical xperience backed by the industry's most dvanced production and test facilities. Thousands of Hughes crystal filters are currently in se in missiles, space vehicles, radar systems and ommunications equipment. Available in various requencies, sizes and environmental standards, ughes filter types include bandpass, single sideand, and rejection, contiguous comb doppler nd thin-film monolithic.

andpass & Single Sideband Filters. Narrow passands steep shape factors and low insertion osses are characteristic of all Hughes bandpass nd single sideband filters. General specifications nclude

enter Frequency Range	250kHz to 100MHz
actual Bandwidth Range	0.002% to 6%
hape Factor (60 db/3 db ratio)	As low as 1.15 to 1
nsertion Loss	Down to 0.1 db
assband Ripple	Down to ±0.1 db

ote: Refer to the General Operating Regions Chart right) to determine producible design combinations of andwidth and center frequency.

QUARTZ CRYSTALS

ughes supplies a full range of low and high frequency quartz crystals from 250kHz up to 50MHz. Both standard and custom units in prototype or production quantities can be supplied or a variety of precision, frequency control applications.

Military Standard Crystals. Manufactured to MIL-3098E, Hughes military standard quartz crystal units are offered in a full range of low and high requencies.

Coldweld Sealed Crystals. For applications requiring exceptionally high reliability and long term frequency stability, Hughes employs the Coldweld process for hermetically sealing the crystal enclosure. Only pressure is used in welding the cover to the base, thereby eliminating all possibility of contamination from fluxes, sparking or heating. Hughes Coldweld quartz crystals are available in 250kHz to 150MHz frequencies and in TO-5, HC-6 or HC-18 Coldweld holders.

Hughes is the country's leading supplier of precision crystal filters and related frequency control devices. A partial list of major programs using these products includes BMEWS, Apollo, Pioneer, Nimbus, Surveyor, Mauler, Hawk, Minuteman, Polaris, Phoenix and Standard Missile. A staff of competent engineers backed by the industry's most advanced quality control and test facilities, stands ready to handle your toughest assignment. Call collect or contact your nearest Hughes representative for assistance.

FREQUENCY STANDARDS & OSCILLATORS SHOWN ARE TYPICAL OF GIBBS ADVANCED PRODUCT DEVELOPMENT CAPABILITIES

For additional products see GIBBS manufacturing pages 1380 and 1381 (Section 2200).

- Full white room facilities controlled to NASA Spec. NPC-200-4, Class 100 per FED-STD-209...
- Environmental test chambers with full temperature, humidity and vibration test facilities...
- Frequency Standard Lab, monitored with WWVB, keeping rigid schedules of calibration...
- Full reliability documentation and I&T procedures available to all projects when requested...
- Resident government quality control representatives...
- NASA approved welding and soldering with on-site training school.
- Latest state of the art in Radiation Hardened Oscillators

Throw Gibbs the Challenge!

GIBBS Custom Builds Crystal Oscillators to Your Specifications

MODULAR DESIGN TECHNIQUES PROVIDE MAXIMUM FLEXIBILITY

Gibbs' capabilities are by no means limited to the manufac of stock items... All of these facilities are available to you the development of equipment of highest reliability for the n specialized applications.

Whatever your particular application, it is likely that some c bination of Gibbs stock modular designed oscillators will n your requirements. Through this concept the oscillator is frequency source and additional output circuits are sin plugged in to meet the specific requirements of the applicat Such modular design makes high reliability oscillators avail on short delivery at relatively modest cost. The models sh here are typical GIBBS Oscillators. We can tailor a unit to your requirements.

MODEL 622

MODEL 1007

THICK FILM HYBRID OSCILLATORS FOR USE WITH EXTERNAL CRYSTAL UNITS, WRITE FOR DETAIL SPECIFICATIONS

TO-5 MODEL 622
5kHz to 100kHz
Use with Low Freq. Crystals
Temp. Range −40°C to 100°C
Use with Series "R" of 25K to 120K
Square Wave Output
100 Milliwatts @ 12VDC

FLAT PACK MODEL 1007
1MHz to 20MHz
Use with "AT" Cut Crystals
Temp. Range −55° to 100°C
Use with TCXO and Conventional Design
Square Wave Output
100 Milliwatts @ 10VDC

OMPUTER CLOCK
rie CX

GIBBS

ULTRA HIGH STABILITY FREQUENCY STANDARDS

FOR LABORATORY STANDARDS, NAVIGATION SYSTEMS, TIME BASES

100KHz to 5MHz

GIBBS MODEL 570

The ultimate in high stability Frequency Standards. **LONG TERM STABILITY:** 1 x 10^{-11} per day. **OUTPUT FREQ.:** 5 MHz, 1 MHz and 100 KHz. **POWER REQUIREMENTS:** 115 V ±10%, 60 Hz, 18 watts nominal. Automatically recharged internal battery maintains output frequency without interruption during transport or power failure. **DIMENSIONS:** 8¼″ high; 8″ wide; 16″ deep.

ULTRA-STABLE

100KHz to 5MHz

GIBBS MODEL 53

A portable Frequency Standard of high stability manufactured to Mil-F-21584C (Ships) specs. Military designation AN/URQ-10. **FREQ. STABILITY:** 5 x 10^{-10} per day (long term); 5 x 10^{-12} rms average of 100 consecutive 1 second periods (short term). **OUTPUT FREQ.:** 5 MHz, 1 MHz and 100 KHz. **POWER REQUIREMENTS:** 115 V ±10%, 50 to 400 Hz; 12 watts nominal. Automatically recharged battery maintains output frequency without interruption during transport or power failure. **DIMENSIONS:** 7 13/16″ high, 5½″ wide; 12½″ deep.

MILITARY
HIGH STABILITY AN/URQ-10

1Hz to 5MHz

GIBBS MODEL 572

A rack mounted 5 MHz Frequency Standard combined with analog-type 24 hour clock with sweep second hand. **FREQ. STABILITY:** 5 x 10^{-10} per day. **OUTPUT FREQ.:** 5 MHz, 1 MHz, 100 KHz, 10 KHz, 1 KHz, 100 PPS and 1 PPS. **POWER REQUIREMENTS:** 115 V ±10%, 50 to 400 Hz; 28 watts, nominal. Automatically recharged battery maintains clock operation without interruption during power failures. **DIMENSIONS:** 5¼″ panel, 19″ rack; 15¼″ deep behind panel; 16¾″ overall depth.

MODEL 571

Same as MODEL 572 above except without clock but with redundant circuitry and outputs.

PRECISION
MASTER TIME SYSTEM

1Hz to 400Hz

GIBBS MODEL 438

The Gibbs Model 438 Frequency Standard Clock is a completely transistorized, quartz crystal-controlled clock, timer, and frequency standard.

Some applications are: aircraft terminals and bases, air traffic control timing systems, time clock checks and updating, recorders laboratory standards, slave clocks, and seismographic use.

SUPPLY VOLTAGE:

110 VAC 60 Hz or 12 VDC battery @ 20 watts max.

FEATURES:

Time Indication: Front panel 24 hour clock with sweep second hand. All hands can be instantaneously reset to zero using a simple ¼ turn reset knob.

Mechanical Programmer: Cam operated contacts that close at 12 hours, 1 hour, and 1 minute intervals.

Accuracy: Better than 0.0001% with a drift rate of less than .0004% per year.

Auxiliary Power Output: 60 Hz square @ approx. 150 V PP into a 2K load.

LOW COST PORTABLE MASTER TIME SYSTEM

For additional products see ACCUTRONICS, pages 1402 to 1414.

TONE OSCILLATORS . . . TONE DETECTORS . . . RESONANT REED COMPONENTS AND MODULES . . . TOUCH-TONE DECODERS

An audio tone can be generated by an electronic oscillator or resonant reed encoder circuit, then transmitted by wire or radio. The tone activates a resonant reed or LC tone detector to perform a control function.

Bramco reeds permit over 60 selective control frequencies within the 67 to 3000 Hz spectrum. This is assured by: (1) the narrow response bandwidth of about 1% for decoders and (2) the high accuracy of Bramco reed encoders (1/10 of 1% of design frequency).

Shown here is a partial list of Bramco components and stability of most Bramco reed products is .002% per °C. Bramco also custom designs special modules, LC filters (see sec. 2700) and complete telemetry systems.

A single pair of wires, or a leased telephone line, can carry the audio signals for a complete control system.

For inaccessible areas or mot stallations, a radio transmitt receiver system can carry the

.310″ x .310″ x 1.26″

RF30 PIEZOELECTRIC TUNING FORK FILTER

Smallest, most economical of Bramco auc family. **Frequency Range:** 300 to 3000 **pedance:** approx. 300K (input and output **Level:** 2 VRMS. **Temperature Stability:** 0.0035% per °C. Ideal when shock and ing characteristics of RF20 are not re

.395″ x .620″ x 1.10″

RF20 CONTACTLESS RESONANT REED FILTER

Works as audio tone filter with sharp selectivity or as frequency source for stable audio tone generator. ***Frequency range:** 80 to 3000 Hz. **Frequency tolerance:** ±0.15%. **Impedance:** approx. 1000 ohms at resonance (input and output). **Input signal:** 0.1 VRMS. **Transfer ratio:** 30 to 60% at resonance (varies inversely to frequency). **Bandpass (typical):** ±0.35% at −12 db. ±2.5% at −18 db. **Price:** 1-9 qty., $20. A major state-of-the-art advance. Contactless concept makes it ideal for continuous tone fail-safe applications. Twin coil design with isolated input and output. Ideal for use as either encoder or decoder. Internally shock mounted, plug-in design.

BRAMCO 20/20 AM TONE TELEMETRY SYSTEM—

Just one of several readily available standard packages.

The Bramco tone transmitters and receivers are mounted onto standard 19″ chassis. All components, including the tone transmitters, tone receivers, amplifiers, power supplies, and relays, plug into the factory-wired chassis. This building block concept permits the user to begin with a partial complement of tone channels, then add modules as the system expands.

Price is approximately $150 per channel, compared to $250 per channel for the most popular LC type AM tone channels.

TOUCH-TONE DECODER MODULE

Use Bell System Touch-Tone telephone as encoder. Frequencies of Bramco decoder match the two simultaneous tones generated by standard Touch-Tone telephone. Proper two audio frequencies energize form C output relay. Includes wideband detector to prevent false triggering. Unit shown is for selective control of single functions at 12 different locations. 12-digit models also available.

*Registered service mark, A.T.&T. Co.

1½″ x 2″

ME201C SINGLE CHANNEL R NANT REED ENCODER MO

***Frequency range:** 80 to 3000 Hz. **Frequ erance:** ±0.15%. **Output:** Sine wave, adj to 2 VRMS into 600 ohms. **Power required** at 12 or 24 VDC. **Price:** 1-9 qty., $59. A co transistorized fixed frequency oscillator with plug-in, dual coil, RF20 resonant ree tures independent feedback and output le justments. Standard octal tube base.

MD201C SINGLE CHANNEL R NANT REED DECODER MO

***Frequency range:** 80 to 3000 Hz. **Nomina width:** ±0.75%. **Input signal:** 0.1 to 2.0 **Output function:** 50 ma maximum. **Po quired:** 15 ma at 12 VDC or 24 VDC plus e load. **Price:** 1-9 qty., $59. A complete tra ized high gain amplifier, contactless RF filter and secondary switching circuit. S octal tube base. Designed for continuo fail-safe applications. Ideal for systems to 10 simultaneous tones over phone lin

ALSO IN STOCK:

MA25C Solid State Linear Amplifier, 600 ohm input, adjustable gain 0 to 47 db. For up to 20 simultaneous tones. 1-9 qty., $69.

MPS1C Power Supply, 24 VDC at 800 ma, regulated and filtered, 1-9 qty., $59.

If the product you need isn't shown please contact factory or local representative for details on other stock models.

1⁹⁄₁₆″ x 1⁹⁄₁₆″ x 2¼″

RD5S MULTI-CHANNEL FREQUENCY SENSING RESONANT REED

***Frequency range:** 200 to 600 Hz. **Nominal bandwidth:** ±1% at 6 VRMS. **Coil resistance:** 530 ohms. **Contact rating:** 100 ma peak at 50 VDC. **Price:** RD5S (housed) 1-9 qty., $21. RD5 (open) 1-9 qty., $12.50. Compact low cost, multi-frequency tone detector. It controls five switching circuits, individually or simultaneously.

2⅛″ x 2⅞″ x 5″

MD5C FIVE CHANNEL RESO REED DECODER MODULE

***Frequency range:** 200 to 600 Hz. **Nomin width:** ±1% (constant above 2.0 VRMS **Input signal:** 1.5 to 5.0 VRMS (into 0.2 me **Output functions:** 5 with 50 ma at 24 VDC **required:** 30 ma at 24 VDC plus externa **Price:** 1-9 qty., $79. A complete transi high gain, constant output amplifier, mu nel decoder with 5 secondary transistor ing circuits. Standard octal tube base. D for non-simultaneous tone systems.

OSCILLATORS

FIXED OR SLIGHTLY VARIABLE FREQUENCY AND/OR AMPLITUDE

- Sine wave frequencies from 50 cps to 80 kc
- Temperature: —25 to +55°C
- Size: 7/8" sq. x 1-9/16" high
- For shock and vibration, specify R (2-1/32" high) or S (1-9/16" high)
- Each oscillator may be adjusted for your requirements of load, voltage output and input, etc.
- 600 ohm balanced output available
- Extremely low distortion units available

All Series except R — R series and trans output unit

ELECTRICAL SPECIFICATIONS

Series 101 and 102 are fixed frequency and amplitude units to be used as a signal source into a light load. These sh be used where no field adjustments are required. Series 101 and 102 usually supplied with 4 pin solder hook terminals. If des specify NOVAL plug.

	Series 101	Series 101A	Series 102	Series 102A
Input Volts, DC	10.5-13.5	24-32	10.5-13.5	24-32
Input Current, ma.	10	10	10	10
Output Frequency	Fixed. Any frequency from 50 cycles to 80 KC			
Initial Frequency Accuracy per cent	± 2½	± 2½	± ½	± ½
Frequency Drift, maximum, per cent	± 2½	± 2½	± 1½	± 1½
Maximum Load, kilohms	10	20	10	20
Output Voltage, VRMS, minimum	1	2	1	2
Change in Amplitude, maximum db.	± 1	± ½	± 1	± ½
Distortion, maximum, per cent	1	1	1	1

Series 103 thru 105 are similar to Series 102 except adjustment of amplitude and frequency may be made with an ext variable resistor. They may be used as signal source into a light load where exact voltage or frequency is required. Series 103 104 are supplied with 4 pin solder hook terminals and Series 105 oscillators are supplied with 7 pin solder hook terminals. If a p unit is required, specify NOVAL plug.

	Series 103	Series 103A	Series 104	Series 104A	Series 105	Series 1
Input Volts, DC	10.5-13.5	24-32	10.5-23.5	24-32	10.5-13.5	24-32

Change in Amplitude, maximum db.	± 1	± ½	± 1	± ½	± 1	± ½
Distortion, maximum, per cent	1	1	1	1	1	1

Series 106 through 110 are for use into a lower impedance load. All require a 600 ohm resistive termination except 110 which requires a 220 ohm termination. Since these units are capable of a small power output, they are recommended for g support use in temperatures from —25 to +50°C. Series 106 oscillators are supplied with 4 pin solder hook terminal and 107 through 110 are supplied with 7 pin solder hook terminals. If a plug-in unit is required, specify NOVAL plug.

VOLTAGE CONTROLLED OSCILLATORS

SERIES 300

- Modular construction — easily repairable in the field
- MIL-E-16400E, Class 4, with temperature to 60°C
- High reliability; high MTBF; parts from MIL-STD-242
- Frequency stability 0.15% of frequency
- High deviation

VOLTAGE TO FREQUENCY CONVERTERS

(WIDE BAND VCO)

Used to convert an analog voltage into digital form. May be applied to register to read digital output.

SERIES 320-1 full military unit meeting MIL-E-16400. Accuracy of conversion is (1% of reading +0.7% of full scale).

SERIES 320-2 for commercial application in the conversion from analog to digital. Range of frequencies is 0 to 50 kHz.

AC DATA VCO MODULATOR AND DEMODULATOR, SERIES 310 AND 410

The 310-1 and 410-1 comprise a modulator-demodulator pair which can be used for transmission of very low frequencies via standard voice channels. Frequency response is 1 Hz to 200 Hz. Carrier is nominal 2500 Hz. Quantity cost for the pair is $95.00. Useful in oceanagraphic, geodetic, seismographic applications, wherever transmission of low frequencies are involved. Detailed data sheets available.

LOW FREQUENCY QUARTZ CRYSTALS

"Low Frequency" at McCoy is defined as the ten (10) variations of cuts that are used in designing crystals from 700 Hz to 700 KHz. The ability to meet sophisticated electrical and environmental requirements reliably has highlighted the growth of our low frequency capability and is the most complete offered in the industry today. Listed below are typical tolerances and holders available.

All units are custom designed and manufactured, and innovations are our specialty.

FREQUENCY DEVIATION WITH TEMPERATURE

STAL FILTERS

mos difficult indeed to cover McCoy's capability in crystal filters in w pas. Conventional narrow, mid, and wide band filters from 1 KHz ver 50 MHz, and monolithic devices utilizing modern computer-ted esigns are produced to demanding specifications in miniature ages Linear phase, switchable bandwidths, single side band, and filters are designed under the auspices of professional design engi-s po essing years of experience, thus permitting maximum latitude eeti difficult requirements.

d bow is a brief cross section of the devices recently produced at cy Electronics, along with charts establishing guidelines for band-hs ailable over the center frequency ranges produced.

This logarithmic chart indicates the practical and theoretical possibilities in crystal filters. Read center frequency along X axis, bandwidth along Y axis. As a rule, filters selected near the middle of the "narrow and intermediate" band can be produced with the greatest variety of characteristics. Darkest areas show new bandwidths and higher frequencies available now.

QUARTZ MECHANICAL FILTERS

Quartz mechanical filters, or monolithic as they are sometimes termed, have been designed and fabricated at McCoy Electronics for the past several years. These acoustically coupled resonators replace many of the conventional crystal filters with improved reliability, lower aging rates, smaller size, and superior temperature characteristics. McCo tronics is now producing custom-designed QMF's in variety over the range of 5 MHz to over 200 MHz. herein are typical quartz mechanical filters availabl McCoy Electronics.

TYPICAL DEVICES

Center Frequency	% Bandwidth	3 db Bandwidth	Shape Factor	No. Poles	Insertion Loss	Max. Ripple	Nominal Impedance	Ultimate Attenuation	Packa Configur

CRYSTAL CONTROLLED OSCILLATORS

ectronics manufactures a complete line of crystal oscillators including TCXO's, VCXO's, oven con- on-oven controlled, and combinations thereof such TCXO. Where size, performance, stability, and relia- of prime importance, the McCoy oscillator line is ed. Most of the models are designed to allow the MIL-approved parts, but commercial versions of available. The electrical specifications noted for el are suggested values only and can be altered specific customer requirements. The requirements 5400, MIL-STD-202 and other environmental speci- can be met with most of the models described e urge you to list your requirements and allow us u our solution to your problem.

MODEL MC1000A1 Standard Crystal Oscillator

Frequency Range: 188 KHz to 50 MHz
Frequency Tol. and Temp. Range:
±50 PPM over —55° to +105°C
±50 PPM over —40° to + 85°C
±50 PPM over 0° to + 75°C
Input Voltage: + 5VDC ± 5%
Output: Square Wave Compatible with TTL or DTL Logic
Package Size: 1.190" × .715" × .230" High Max.
Package Volume: .196 Cubic Inches
Mounting: Printed Circuit Board or Direct Plug in to a Dual In-Line Socket
Seal: Hermetic

OSCILLATORS CONTINUED

MODEL MC109A1 Standard Crystal Oscillator

Frequency Range: 30 KHz to 50 MHz
Frequency Tol. and Temp. Range
30KHz to 650 KHz:
±150 PPM over —55° to 105°C
650 KHz to 50 MHz:
±50 PPM over —55° to +125°C
±50 PPM over —55° to +105°C
±50 PPM over 0° to + 75°C
Input Voltage: +5 VDC ± 5%
Current Drain: Low as 10 MA to 50 MA Depending on Frequency Selected
Output: Square Wave Compatible with TTL or DTL Logic
Package Size: 1" × 1" × 0.5" High
Package Volume: 0.5 Cubic Inches
Weight: Less Than 1 Ounce
Environmental: Designed to meet MIL-E-5400. Commercial Versions Also Available.
Seal: Hermetic

MODEL MC110A1 Standard Crystal Oscillator

Frequency Range: 30 KHz to 50 MHz
Frequency Tol. and Temp. Range
(Suggested Values Only)
30 KHz to 650 KHz:
±100 PPM over —55° to +85°C
±65 PPM over —40° to +70°C
±50 PPM over 0° to +75°C
650 KHz to 30 MHz:
±70 PPM over —55° to +125°C
±50 PPM over —55° to +105°C
650 KHz to 50 MHz:
±50 PPM over —40° to +85°
±50 PPM over 0° to +75°C
Input Voltage: +5 VDC ± 5%
Current Drain: Low as 10 MA to 50 MA Depending on Frequency Selected
Output: Square Wave Compatible with TTL or DTL Logic
Package Size: 1" × 1" × .360" High
Package Volume: .360 Cubic Inches
Weight: 1 Ounce Maximum
Seal: Hermetic

MODEL MC166X1 Standard Crystal Oscillator

Frequency Range: 0.9 Hz to 150 KHz
Frequency Tol. and Temp. Range
0.9 Hz to 15 KHz:
±250 PPM over —55° to +105°C
4.0 Hz to 150 KHz:
±200 PPM over —55° to +105°C
0.9 Hz to 15 KHz:
±150 PPM over 0° to +70°C
4.0 Hz to 150 KHz:
±150 PPM over 0° to +70°C
Input Voltage: +5 VDC ± 5%
Output: Square Wave Compatible with TTL or DTL Logic
Package Size: 2" × 2" × .595" H. Max.
Weight: Less than 3 Ounces
Seal: Hermetic

MODEL MC209A1 Standard Crystal Oscillator

Frequency Range: 1.8 KHz to 650 KHz
***Temperature Range:** —55° to +105°C
***Frequency Stability:**
1.8 KHz to 12 KHz: ±150 PPM
12 KHz to 650 KHz: ±50 PPM
Input Voltage: +5 VDC ± 5%
Output: Logic
Weight: Less than 1.5 Ounces
Package Size: 1" × 1.5" × 0.5" High
Seal: Hermetic
Mounting: Direct Printed Circuit Board Mounting
*Suggested Values Only — List Your Actual Requirements

MODEL MC210A1 Standard Crystal Oscillator

Frequency Range: 1.8 KHz to 650 KHz
***Temperature Range:** —55° to +85°C
***Frequency Stability:**
1.8 KHz to 12 KHz: ±150 PPM
12 KHz to 650 KHz: ±50 PPM
Input Voltage: +5 VDC ± 5%
Output: Logic
Weight: Less than 1.5 Ounces
Package Size: 1" × 1.5" × .360" High
Seal: Hermetic
Mounting: Direct Printed Circuit Board Mounting
*Suggested Values Only — List Your Actual Requirements

MODEL MC222X1 Standard Crystal Oscillator

Frequency Range: 3.0 MHz to 125 MHz
Temperature Range: —55°C to +105°C
Frequency Tolerance: ±50 PPM
Input Voltage: +10 VDC ± 5% at 10 MA Max.
Output Waveform: Sine
Output Levels
3.0 MHz — 20 MHz: Typically 4 VP-P Min. into a 5000 Ω Load
20 MHz — 125 MHz: 1 MW Min. into a 50 Ω Load
Package Size: .352" × .757" × .775" High
***Mounting and Terminals:** 3 ea., .030" Dia. Wire Leads
Seal and Weight: Hermetic, 100 grams Max.
*This unit also available with .050" dia. Pins, .248" Long for plug-in application. This is Model MC223X1.
The unit is also available with outside trim capability. Contact McCoy Electronics Co., Oscillator Engineering for details.

MODEL MC262X1 Standard Crystal Oscillator

Frequency Range: 180 KHz to 25 MHz
***Frequency Tolerance:** ±50 PPM
***Temperature Range:** —55° to +105°C
Input Voltage: +5 VDC ± 5%
Current Drain: Low as 10 MA to 50 MA Depending on Frequency Selected
Output: Square Wave Compatible with TTL or DTL Logic
Package Size: 1" × 1.5" × .375" High Max.
Package Volume: .563 cubic inch
Weight: Less than 2 Ounces
Seal: Hermetic
*Suggested Values Only — List Your Actual Requirements

MODEL MC302X1 Standard Crystal Oscillator

Frequency Range: 4 MHz to 150 MHz
***Frequency Stability:** ±50 PPM
***Temperature Range:** —55° to +105°C
Input Voltage: ±10 VDC to ±28 VDC (Must Select Value)
Output: Sine Wave
Output Level: 5 MW Min. into 50 Ω Typical
Weight: Less than 2 Ounces
Package Size: 1" × 2" × .6" High
Seal: Hermetic
*Suggested Values Only — List Your Actual Requirements

MODEL MC163X2 Temperature Compensated Crystal Oscillator

Frequency Range: 8.0 KHz to 28.0 MHz

Temperature Range	Frequency Tolerance
−30° to + 60°C	±0.5 PPM
−40° to + 70°C	±1.0 PPM
−55° to +105°C	±5.0 PPM

Input Voltage: +12 VDC ± 2% and +5 VDC ± 5%
Output: Square Wave Compatible with TTL or DTL Logic
Outside Trim: Available on Request
Package Size: 2" × 2" × .525" High
Mounting: 5 ea., .030" Dia. Wire Leads for PC Board Mounting
Seal: Hermetic

MODEL MC200X1 Temperature Compensated Crystal Oscillator

Frequency Range: 10 MHz to 25 MHz
Temperature Range: −30° to +75°C
Frequency Tolerance: ±5 PPM
Frequency Accuracy at RT: 1 PPM Max.
Outside Frequency Trim Capability: ±20 PPM Minimum
Input Voltage: +9 VDC ± 1%
Output: 72 MV ± 2.0 db into a 50 Ω Load
Output Waveform: Sine
Package Size: 1.015" × .530" × 2.060" High Maximums
Mounting: Optional (Unit shown has mounting bracket)
Terminals: 4 ea., .040" Dia. Pins, .200" Long
Weight: 1.5 Ounces Maximum

MODEL MC301X2 Temperature Compensated Crystal Oscillator

Frequency Range: 12.0 MHz to 85 MHz

Temperature Range	Frequency Tolerance
−10° to + 60°C	± 1.0 PPM
−55° to +105°C	±10.0 PPM

Input Voltage: +12 VDC ± 5% at 25 MA Max.
Output Waveform: Sine
Output Power: Typically 5 MW into a 50 Ω Load
Package Size: 1.0" × 2.0" × .6" High Maximum
Mounting: 4 ea., 4-40 Studs
(1) Terminals: 3 ea., .030" Dia. Wire Leads
Weight: Less than 3 Ounces
Seal: Hermetic

Note 1: The leads of the MC301X2 are brought out the side of the case. Another version (MC302X2) is available with the leads coming out the bottom of the case.

MODEL MC550C7 Temperature Compensated Voltage Controlled Crystal Oscillator (TCVCXO)

Frequency: 3.579545 MHz
Temperature Stability: ±0.0002%
Temperature Range: 0° to +50°C
Mechanical Trim: ±0.0003% @ 0 Volts on AFC
Input: +12 V ± 0.1% at 5 MA Max.
Output: 1.5 VP-P Min. Sine Wave
Load Impedance: 3.3K Ω Shunted by 22 Pf Capacitance
AFC Characteristics:
Pull Range: ±20 Hz Min. to ±40 Hz Max.
AFC Voltage: ±0.5 Volts
Package Size: 1.75" × 1.5" × .750" High
Seal: Hermetic

ECONOMY INTEGRATED CIRCUIT OSCILLATOR

OFF THE SHELF DELIVERY ! as low as $32.90 each in 10 quantity

Monitor's new Integrated Circuit Oscillators make it uneconomical to buy crystals (even ours) and design your own oscillator. Why are they so economical? They were designed specifically for the less stringent temperature and stability requirements found in commercial and industrial EDP and digital control applications. But don't think the low price means lower quality. They feature the same high quality, workmanship and reliability as the 700 Series IC Oscillators shown below.

Who pioneered the Koldwell Crystal . . . MONITOR! Who was first with a complete line of integrated Circuit Subminiature Oscillators . . . MONITOR! NOW—who is going to be first to break the Availability Barrier . . . you know it . . . is! We say it's "STOCK IT TO ME TIME!" That's right—off the shel to you for the first time, complete crystal oscillators. Not just one or t of the most commonly manufactured frequencies. Naturally, we are not have all the items you need, but beside the crystal oscillators, we h sands of crystals ready to go—in all shapes and sizes—give us a chanc we mean business. Call us—tell us what you need and just say "STO ME!" (We've got some OVENS in stock, too . . .)

50Hz to 125MHz dual in-line plug-in packages

- Complete crystal controlled IC oscillator in sizes from .350 to 2 cubic inches.
- Off the shelf delivery of the most commonly used frequencies i.e. 60Hz; 100 KHz; 1, 5, 10 and 100 MHz plus 30 others.
- TTL outputs.

Call or write for complete specifications and prices.

16KHz to 40MHz, TTL and Logic outputs

820, 830, 840, 850

YSTAL FILTERS

e of a nation's leading suppliers of high reliability crystals and subminia- integrd circuit oscillators, Monitor Products recently expanded their product o inc e quartz crystal filters in the 20-1000 KHz region.

he lization of the computer in the realization and most importantly in the sis of lter networks, Monitor is now able to provide a suitable tool to produce lit for our customers.

ad l of catalog items is not available, but Monitor will quote directly to filter uirements.

or h developed several prototype networks based on computer-aided design. compr-graphic analysis of these networks is shown below. The figures are in selves omewhat unique in that all of the pertinent characteristics of the net- are a lable to the customer with a single graphic presentation.

While these are theoretical curves, it can be noted that they are not the common textbook variety, and the physical losses of both crystals and coils are included in the analysis. In the majority of these cases where a computer-graphic analysis is presented, the characteristics far exceed the specifications. If the design in any way appears borderline, element perturbations are made and a sensitivity projection indicated to justify or eliminate the design.

While Monitor is new in the filter field, we feel that the crystal is the heart of the device, and our capabilities in this area are well known. We cannot guarantee that we can produce every one of your requirements. However, we can guarantee that we will not lead you into production delays by a faulty and unrealistic design.

Please forward your production requirements to Monitor for our analysis and quotation.

HIGH RELIABILITY "KOLDWELD" CRYSTALS 10KHZ TO 170MHZ

The LDWELD process is the first major advance in crystal relia ity and packaging in 20 years. The process eliminates contnating solder, flux and heat from the sealing process nd improves aging and reliability. Each crystal is manufacred under decontaminant conditions, then leak tested to 1 cc of helium per second prior to final QC testing. ers a Monitor crystal for all your high reliability frequency contl applications. Monitor also manufactures a complete line crystals to MIL-C-3098D.

M-tron INDUSTRIES, INC.

Largest independent U.S. producer of reliable "AT" cut quartz crystals

- All Mil-type crystals—QPL approvals on most
- Crystals matched perfectly to your circuit

9 EASY STEPS to quickly obtain M-tron Crystals perfectly matched to your circuit.

Please tell us the following...

1. Nominal Frequency @_____°C, ±_____%
2. Maximum Tolerance: ±_____%, over temp. range _____°C to _____°C.
3. Holder and/or case configuration. Choices include: HC-6, HC-[illegible], HC-18, TO-5. Specify pins or wire leads; solder seal or cold-w[illegible]. Note: Below 3.000 MHz, HC-6 or larger is the only economica[illegible] practical holder.
4. Maximum Resistance allowed (if unknown, standard Mil resistance will be supplied).
5. Designate series or parallel resonance. If parallel resonant, specify load capacitance.
6. Mode of Oscillation i.e. Fundamental, Third Overtone, Fifth Overtone, etc.
7. Specify Drive Level. If unknown, standard drive level for equi[illegible] Mil-type crystal will be supplied. CAUTION: Excessive drive le[illegible] may cause frequency shifts or damage to crystal blank.
8. Environmental parameters, if applicable.
9. Can marking.

HC-6/U

HC-18/U

HC-32/U

HC-35/U (TO-5 TYPE)

LOW FREQUENCY FILTER?

SPECIFY MURATA *MICROFORK*®
a unique piezoelectric tuning fork.

CROFORK MODEL EFM

Microfork is a newly designed submi-ature tuning fork.
This model is now widely used for boy system, selective calling, remote trol and tone control of electronic sic struments, where compactness, gedness and economy are required. Nickel plated brass case is mounted a plastic base designed for printed cuit arrangement.

SPECIFICATION

Item	for Receiver EFM-R	for Sender EFM-S
Frequency	360~2900Hz	
Frequency accuracy	360~ 999Hz ; ±0.5Hz 1000~2900Hz ; ±1.0Hz	
Input and output impedance	300KΩ	
Insertion loss*	10dB max.	
Temperature coefficient of Frequency	3.5×10^{-5}/°C max.	
Allowable temperature range	−20~+60°C	

$$\text{Insertion Loss} = 20\log\frac{E_1}{E_2} - 6(\text{dB})$$

STANDARD FREQUENCY (Hz)

37.5	532.5	697.5	862.5	1000
42.5	547.5	712.5	877.5	1500
47.5	562.5	727.5	892.5	1700
52.5	577.5	742.5	907.5	1900
57.5	592.5	757.5	922.5	2100
62.5	607.5	772.5	937.5	2300
67.5	622.5	787.7	952.5	2500
72.5	637.5	802.5	967.5	2700
77.5	652.5	817.5	982.5	2900
82.5	667.5	832.5	997.5	
87.5	682.5	847.5		

DESIGN CONSIDERATION

1. Maximum voltage of input is 10Vrms.
2. Microfork is not effected by magnetic field and is not mutually coupled even in close lay-out.
3. Microfork may oscillate in higher harmonics. In this case, you should use high pass capacitor (0.001~0.005 μF) at the output of Microfork, as shown in Fig. 3.
4. EFM-R is adjusted by the test circuit of Fig 1.
   But oscillating frequency by the self-oscillator circuit of Fig. 3 is lower about 0.2% than the adjusted frequency.
   So, EFM-S is adjusted by the test circuit of Fig. 3.
5. The input and output impedance of Microfork is 300 KΩ as shown in the specification.
   The band-width of Microfork is maximum when terminated by this valued resistance as shown in Fig. 1.
   When the resistance value is smaller, both band-width and resonant frequency decrease the more as shown in Fig. 2.

FREQUENCY CONTROL DEVICES

Ovenaire, Inc. for many years recognized as one of the world leaders in the design and manufacture of crystal and component ovens has utilized this experience and capability to establish an equally high reputation for oven stabilized crystal oscillators. Our specialized knowledge of crystal specifications coupled with production line techniques for matching crystal turn points to oven control temperatures make Ovenaire a logical choice for economical oscillators meeting any specified level of stability.

Ovenaire is versatile with instrumentation capable of measuring frequency deviations of parts in 100 billion we can meet the most exacting requirements of a high precision Military navigational system. At the same time, our volume production techniques enable us to supply competitively priced oscillators for such applications as commercial computer data transmission systems.

Consult the tables on these pages. Select one of our standard design series or contact us for special requirements.

OVENS

CRYSTAL OVENS

Model No.	Accommodates	External Size (Seated Height)	Operating Temperature	Voltage	Temperature Control	Temperature Cycling	Mounting
T-2	1 or 2 HC-6/U	1-1/4" Dia. 1-3/4" High	Factory Set 50° to 110° ± 2°C	6, 12, 28 V DC/AC	Bi-Metal Creep T/S	±0.5°C	Octal Plug
A-2	1 or 2 HC-6/U	1-1/4" Dia. 1-3/4" High	65°, 75°, 85° ±2.5°C	6, 12, 28 V DC/AC	Snap Action T/S	±1°C	Octal Plug
A-2C	1 or 2 HC-6/U	1-1/4" Dia. 1-3/4" High	65°, 75°, 85° ±2.5°C	6, 12, 28V DC 115V AC	Snap Action T/S	±0.3°C	Octal Plug
SA-101	1 or 2 HC-6/U	1-1/2" Dia. 2-3/16" High	65°, 75°, 85° ±2.5°C	6, 12, 28V DC 115V AC	Snap Action T/S	±0.05°C	Octal Plug
MSCR	1 or 2 HC-6/U	1-1/2" Dia. 3-3/16" High	65°, 75°, 85° ±0.5°C	115V AC	Mercury T/S W/SCR	±0.005°C	Octal Plug
C-2	1 or 2 HC-6/U	1-1/4" Dia. 1-3/4" High	65°, 75°, 85° ±2.5°C	6, 12, 28 V DC	Proportional Control	±0.05°C	Octal Plug
A-3	3 HC-6/U	1-1/2" Dia. 2-3/16" High	65°, 75°, 85° ±2.5°C	6, 12, 28V DC 115V AC	Snap Action T/S	±0.2°C	Octal Plug
A-4	4 HC-6/U	1-57/64" x 1" x 1-3/4" High	65°, 75°, 85° ±2.5°C	6, 12, 28 V DC/AC	Snap Action T/S	±1°C	Octal Plug
A-10	10 HC-6/U	2-7/8" x 2-13/32" x 1-3/4" High	65°, 75°, 85° ±2.5°C	28V DC 115V AC	Snap Action T/S	±0.3°C	Terminals or wire leads.
A-12	12 HC-6/U	3-1/4" x 2-9/16" x 1-3/4" High	65°, 75°, 85° ±2.5°C	28V DC 115V AC	Snap Action T/S	±0.3°C	Terminals or wire leads.

Similar models to accommodate HC-13/U, HC-18/U and HC-25/U crystals also available.
Above operating temperatures and voltages standard. Other temperatures and voltages available.

COMPONENT OVENS

Model	External Size (Seated Height)	Cavity Size	Maximum Power	Temperature Cycling	Mounting and Internal Socket
C-101	1-1/2" Dia. 2-3/16" High	61/64" Dia. 15/16" High	15 Watts	±0.05°C	Octal or 11 Pin 4, 7 or 9 Pin
C-102	1-1/2" Dia. 2-15/16" High	61/64" Dia. 1-11/16" High	15 Watts	±0.05°C	Octal or 11 Pin 4, 7 or 9 Pin
C-103	1-1/2" Dia. 2-3/16" High	1-11/64" Dia. 1-3/32" High	15 Watts	±0.1°C	Octal or 11 Pin 4, 7 or 9 Pin
C-104	1-1/2" Dia. 2-15/16" High	1-11/64" Dia. 1-27/32" High	15 Watts	±0.1°C	Octal or 11 Pin 4, 7 or 9 Pin
C-105	1-1/4" Dia. 1-3/4" High	61/64" Dia. 11/16" High	10 Watts	±0.1°C	Octal or 11 Pin 4, 7 or 9 Pin
C-106	1-1/4" Dia. 2-5/8" High	61/64" Dia. 1-7/16" High	10 Watts	±0.1°C	Octal or 11 Pin 4, 7 or 9 Pin
C-107	2" Dia. 4-1/4" High	1-27/64" Dia. 2-59/64" High	20 Watts	±0.1°C	Octal or 11 Pin 4, 7 or 9 Pin

All models available with operating temperatures of 65°, 75°, 85° ±2.5°C.
Voltages up to 115 V for AC operation and 28 V for DC operation.
All models available with plug-in component board for 4, 7 or 9 pin internal socket.

CUSTOM DESIGN OVENS

Ovenaire maintains a large inventory of basic parts as well as a completely equipped model shop. This makes it possible for us to move swiftly on special designs for prototypes as well as production models.

Research and development of crystal and component ovens at Ovenaire have kept pace with the state of the art requirements. Today ovens ranging from economical units for competitively priced mobile equipment to ultra precision units for demanding instrument applications are in daily production at our facility.

Our engineers will assist you in specifying an oven to meet your exact requirements.

Quartz Crystals and Crystal Filters

We manufacture an extremely wide variety of high-frequency and low-frequency quartz crystal units, conventional, discrete-element crystal filters, and monolithic and tandem monolithic crystal filters. We offer an excellent selection of standard types plus the know-how to meet your special requirements most economically.

High Frequency Crystals – .8 MHz to 250 MHz

Standard military and commercial types as well as special units including mode-controlled VCXO crystals, tight tolerance, and high shock units. All popular holders — coldweld and solder-seal — are available.

Low Frequency Crystals – 1 kHz to 1 MHz

Some ten or more different crystal cuts are used at frequencies below 1 MHz. We make them all and can provide the one that is best for your application, military or commercial.

Conventional Crystal Filters

Bandpass, bandstop, and single-sideband designs from 10 kHz to 30 MHz. Bandwidths from .01% to 8%. Modern insertion-loss design techniques insure maximum performance. We specialize in production designs, not prototypes.

Integrated Monolithic Crystal Filters

Piezo Technology specializes in integrated crystal filters — both monolithic and tandem monolithics — from 2 MHz to 350 MHz. PTI is first in the technology of monolithics. Our pioneering achievements include — the first VHF monolithic crystal filter (1966), high-performance tandem monolithics using modern filter design techniques (1967), the first monolithics above 300 MHz (1968), the first volume-produced multi-resonator VHF monolithics (1969). Piezo Technology has more experience in monolithics and tandem monolithics than anyone else, anywhere in the country. And we can prove it.

IXF® Integrated Crystal Filters

Standard models include VHF front-end filters for mobile and aircraft communications, marker beacon filters, and 30 MHz IF filters. Custom models, both monolithic and tandem monolithic, are available with a wide variety of performance characteristics and package configurations.

Comline® Integrated Crystal Filters

Piezo Technology offers the broadest line of standard model 10.7 and 21.4 MHz crystal filters on the market. Two-pole up to twelve-pole response available in a variety of popular bandwidths. Our upright mount and flatpacks are far and away the smallest standard model 10.7 and 21.4 MHz crystal filters available. Models are also in stock to fit existing equipment without modification. Take advantage of the reduced cost, small size and improved performance of these tandem monolithic integrated crystal filters.

Guide to Standard Models 10.7 MHz

13 kHz Bandwidth	15 kHz Bandwidth	30 Khz Bandwidth	No. Poles (Resonators)

REEVES-HOFFMAN

Described are typical units of commonly used types. Descriptive data, including measured capabilities, furnished on request. If your need concerns types and parameters not shown, please contact our plant.

Available with special C_0, C_1, and L_1 for filter applications • temperature coefficients to your specifications • pre-aging to guarantee stability of high precision units • special designs for high shock and vibration. All units meet mil-3098 requirements. Special high precision units, with aging characteristics up to 2×10^{-11} per day, are available in standard frequencies of 1, 2.5 and 5 MHz.

If You Need Oscillators...

Custom or Standard...

You're Looking in the Right Place.

With us, "custom" is customary.

That's exactly what you would expect from the company who offers the most comprehensive "SPECTRUM" of frequency control devices available, from less than 1 Hz to 100 MHz. With 20 years experience in our field (we were formerly Varo T & F) we've learned that nearly all oscillator requirements are a little bit different.

Sure we have standard designs, and we start with these and adapt them to fit YOUR requirements. Chances are, we have an existing design similar to your requirements no how complex. Some examples of our standard designs from Tuning Fork Resonators to Temperature Comp Crystal Oscillators are described briefly on the opposi

If you have a system application that requires custom fork oscillators, crystal oscillators, logic clocks, or fork resonators; phone or wire for complete technic

: .88" x .88" x .45" Can be mounted on printed circuit board. Hermetically sealed.

SUB-MINIATURE TEMPERATURE COMPENSATED CRYSTAL OSCILLATOR

Designed for applications where no warm-up time or oven power is available, this series represents the smallest TCXO known. Employing state-of-the-art technology, these subminiature devices dissipate less than 80 mW of power. Excellent long-term stability results from the use of glass enclosed, or cold-weld quartz crystals.

SERIES 7013

Frequency: 8 MHz to 20 MHz
Accuracy: ±1 x 10-6 at +25°C
Stability: To ±1 x 10-6, −40 to +70°C
Package: 1" x 1" x ½" Can be mounted by terminals on PCB. Hermetically sealed.

PRECISION OSCILLATOR

Sub-miniature tuning fork oscillator. Combines advantages of ceramic transducers and modern integrated circuitry for high performance in a small package. Resonator element is mounted in silicon-rubber to provide isolation from shock and vibration.

SERIES 6222

Frequency: 1 kHz to 40 kHz without multipliers.
Output: 1 volt rms minimum to 10,000 ohm load, sine.
Package: 2" x 2" x ½" seated height. Lead mounted directly to printed circuit board. Hermetically sealed.

CRYSTAL OSCILLATOR I.C. LOGIC CLOCK

This series of high reliability, low power consumption I.C. Logic Clocks provide complimentary outputs for computer systems requiring both Q and $\overline{Q}$ logic levels. Low profile makes printed circuit mounting practical for high density packaging. This design has been found appropriate in high shock and vibration environments.

SERIES 7017

Frequency: 187.5 kHz to 20 MHz
Stability: ±.005%
Output: Q Logic "0" = +0.5V Max. Sink 5 ma
Q Logic "1" = +3.0V Min. Source 1 ma
$\overline{Q}$ Logic "1" = +3.0V Min. Source 1 ma
$\overline{Q}$ Logic "0" = +0.5V Max. Sink 5 ma
Temp. Range: −55°C to +125°C
Input: 5Vdc ±10%, 7 to 20 mA
Package: 1.2" x .6" x .5"

RUGGED TUNING FORK OSCILLATOR

Produces stable output frequency where reliable low frequency signals, small size and low weight are essential. All solid state. For use in all military and aerospace environments. Performs function of frequency standard, time base generator, computer clock source, speed control reference source, program controller, or frequency coding.

SERIES 6203

Frequency: 800 Hz-4,000 Hz
Output: 8V minimum peak to peak at 12 Vdc supply, to 10 K ohms, sine or square, with 10 microseconds maximum rise and fall time.
Package: 1¼" x 1½" x 1½" Stud mounted. Hermetically sealed.

SUB-MINIATURE TUNING FORK OSCILLATOR

Tiny eleven-gram package combines the advantages of ceramic transducers and modern integrated circuitry. Unit mounts by leads directly on printed circuit board. Tuning fork element is mounted in silicon-rubber which provides isolation from shock and vibration.

SERIES 6205

Frequency: 2 kHz to 40 kHz
Output: Logic "0", <+0.5 volts
Logic "1", +4.0 ±0.5 volts
Waveshape: Square
Rise-Fall Time: Less than 5% of total period measured from 10% to 90% of maximum.
Package: ⅞" square. Only 7/16" high when seated. Hermetically sealed.

ELECTROMAGNETICALLY COUPLED TUNING FORK RESONATORS

Designed for use in oscillator circuits where frequency stability requires use of a mechanical resonator. Will withstand severe mechanical shock without calibration change. Resilient mounting clips provide vibration isolation. Hermetically sealed in drawn, cold-rolled steel cans.

	SERIES 256	SERIES 264
Frequency:	360 Hz — 2 kHz	1 kHz — 4 kHz
Accuracy:	±.05%	±.05%
Operating* Temp.:	−55°C — +100°C	−55°C — +100°C
Package:	2 7/16" long, ⅜" dia.	1 15/16" long, ⅜" dia.

*Closer tolerance over narrower temperature ranges available.

CREATIVE LEADERS IN COMPONENTS FOR COMMUNICATION TECHNOLOGY

BANDPASS FILTERS & DELAY EQUALIZERS FOR VOICE, RTTY MULTI-PLEX OR DATA TRANSMISSION.

MINIATURIZED CRYSTAL OSCILLATOR

MINIATURIZED 8 POLE CRYSTAL FILTER

COMPUTER OPTIMIZED DESIGNS OF CRYSTALS, OSCILLATORS AND FILTER NETWORKS.

CRYSTAL FILTERS

DCA and/or MIL-STD-188 Type Crystal Filters that provide required amplitude and envelope delay characteristics without use of separate equalizers are available. Carrier Frequencies of 100KHz through 1750KHz for both two and four channel applications.

Standard and custom designs for bandpass, band reject, phase matched filters plus discriminators are available at frequencies of 10KHz through 30MHz.

CRYSTAL OSCILLATORS

Fixed frequency, voltage controlled, temperature compensated or ovenized. Standards, miniaturized and custom designs available from 5Hz through 100MHz.

MAGNETIC COMPONENTS AND RESONATORS

Lowpass, highpass, bandpass, band reject and prescribed transfer function characteristics available from 1Hz to 150MHz.

Custom resonator design and production is available for frequencies from 10KHz through 30MHz.

TEMPERATURE COMPENSATED VOLTAGE CONTROLLED CRYSTAL OSCILLATOR:

10 KHz TO 60 MHz STANDARD OR CUSTOM CRYSTAL RESONATORS

LC BANDPASS FILTERS

COMB FILTER ASSEMBLY 32 CHANNELS

CRYSTAL CONTROLLED CLOCK OSCILLATOR

- **1 HZ to 25 MHZ Fixed Frequency Crystal Oscillator**

- **Available in Encapsulated P/C Mount or Hermetic**
- **Excellent Rise/Fall Time, Square Wave**
- **Compatible with T^2L Logic**
- **Minimum Power Required, All Solid State**
- **Economically Priced for Industrial Applications**

TYPE	*FAN OUT	FREQUENCY RANGE	TEMP. RANGE DEG. C.	TOLERANCE	POWER REQUIREMENT
T070E10E	10	7 KHZ to 100 HKZ	−20 to + 70	±200 PPM (.02%)	Operating Voltage 3.5 to 5.5 V DC
T070G10E	10	7 KHZ to 100 HKZ	−20 to + 70	±300 PPM (.03%)	Nominal Power 30 MW 100 KHz

QUARTZ CRYSTALS

COLD WELD

RESISTANCE WELD

Frequencies from 15 KHz to 100 MHz manufactured to the highest tolerances and hermetically sealed with e latest methods.

Torotel's cold welding process provides crystals to the most severe tolerances in the HC-38/U, HC-39/U and HC-4 U crystal holders. These holders are checked for helium leaks at parts in 10^{-9} CC per second. Crystals packaged in t s manner are especially suited for PC board mounting.

Resistance weld sealing is available **at no extra cost** in the HC-6/U, HC-18/U, HC-25/U and HC-33/U stand d holders. This process uses an electrical weld to seal the crystal unit in a helium-nitrogen atmosphere. Solder balls a d aging due to flux contamination are completely eliminated.

QPL-3098

In house laboratory facilities can perform testing to MIL-C-3098E. Many standard types are QPL approved a l custom designs are available on request.

CRYSTAL FILTERS

Crystal filters from 10 KHz to 30 MHz are computer designed for maximum performance. Custom designs a considered a challenge. Contact Torotel's engineering staff for assistance. See EEM Section 2700 for LC and Mode Filters.

TOYOCOM SYNTHETIC QUARTZ

TOP IN QUALITY, WIDE SELECTION AND APPLICATION!!

TOYO QUARTZ is manufactured under strict controls and must pass severe testing before it is released, and then it is almost completely flawless and easier to use.

TOYO QUARTZ, the product of TOYO's many years of experience in quartz crystal manufacture, comes in various types and sizes for easy adaptation by the customer to fit his requirements. Although manufactured primarily for use in electronic communications equipment, especially in oscillators, TOYO QUARTZ is also suitable for optical applications particularly since its optical characteristics are superior to those of natural crystal.

or LOW FREQUENCY

+2 5°Raw Synthetic Quartzs Size and Blanks Size

Types	Z (mm)	X (mm)	Max. b (mm)

ALCOKNOB

DIV. OF ALCO ELECTRONIC PRODUCTS, INC.

ALUMINUM INSTRUMENT KNOBS

STANDARD SERIES

"K"eries knobs are a completely matched family in four basic ia ters to enhance equipment appearance. Each knob is ma ined from one-piece aluminum and then anodized in either na al, black or gold. ALCO's 1¼" dia. K-1250-S Spinner Knobs are art of this "K" Series family and have the addition of a kn ed handle. The K-5700 matched knobs for concentric shaft co ols consist of two separate knobs: an upper knob for the in control shaft (⅛" dia.), and lower knob for the outer co ol shaft (¼" dia.)

Model	Finish — See Box Below	O.D.	One-99	100-249	250-499	500-999

SKIRTED ANODIZED KNOBS FOR ¼" SHAFTS

T "KS" and "KSP" Skirted Series offer an excellent matching kn group to the ALCO "K" Series described above. You may ch se between a solid aluminum skirt (KS Series), or the clear ac lic plastic skirt (KSP Series). The "KS" Series is available in ree body sizes, and the "KSP" Series is available in two si . These knobs have exceptional styling for the modern sp e-age technology, yet are reasonably priced for production u . The color grouping includes natural aluminum, and bl k anodizing.

KNURLED ALUMINUM KNOBS

DIAMOND KNURL SERIES

T conical top of this series adds a new dimension to knob s ing. The nonslipping diamond knurl knobs feature precision ch ining, unbreakable strength, and uncompromizing anod- i l colors of natural, black or gold finish with hairline indi- ors. This fine diamond knurl knob combines the rich, a dized look in a metal knob, yet with all these quality features t ALCO "KD" Series costs far less than you would expect to . The diamond knurl family is available in four sizes.

STRAIGHT KNURL SERIES

CO's new "KN" Series of straight knurl knobs with hairline licators includes the lustrous solid anodized color types and decorative two-tone models. The straight knurl knobs have an, precision serrations of the highest quality. The anodized o-tone knob is available in two variations: (AB) natural minum body with black top, or (BA) black anodized body h natural top. For the first time ALCO is proud to offer a ting one-piece aluminum pointer knob (KPN-700) — thus mplementing this series.

ALUMINUM INSTRUMENT KNOBS

MINIATURE SERIES

With the development of solid state circuitry and the "squeeze" on the instrument panel, ALCO has created a mating series for miniature switches and controls having a ⅛" diameter shaft. The "KC" Series is designed for the MRA Series Alcoswitch, but usable with other components. "KCVS" Knobs provide the need for setting a predetermined stop position on controls or rotary switches with a ⅛" shaft. KC-500-10 has engraved numerals 0 through 9. KR-1 Knob Reducing Adapter can convert any knob having a ¼" shaft hole to fit a ⅛" size shaft.

Model	Finish—See Box Below	Description	One-99	100-249	250-499	500-999

DELUXE SERIES

These deluxe knobs are functionally styled to enhance the appearance and improve the operation of quality equipment. The unique, saw-cut indicator brings about the mod-trend in a complete family of knobs in four body sizes for use with ¼" shafts only; single set screws. More than any other component on your instrument panel, control knobs are in constant contact with the user. Customers first touch, twist, and use knobs (and are often influenced by this reaction) when purchasing hi-fi/stereo, tape recorder, test, lab and medical equipment. Model KHF-1250 is supplied with 2 set screws, and has 120° spacing.

PLASTIC KNOBS WITH ALUMINUM TOPS

KNURLED KNOBS FOR ⅛" AND ¼" SHAFTS

Alco's new series of molded instrument knobs have been selected specifically for functional utility and attractive eye appeal. Designed to harmonize and enhance the appearance of any commercial and consumer electronic equipment. Available only in black plastic, each knob features an attractive spun aluminum cap plate thereby offering a pleasing two-tone effect. Equipped with molded-in brass bushing and standard 6/32 set screw. An indicating dot or hair line is provided on all knobs and is filled with white paint.

Model	Knob O.D.	Skirt O.D.	Shaft Dia.	One-99	100-249	250-499	500-999

STANDARD KNOBS FOR ⅛" AND ¼" SHAFTS

This new ALCO series has the advantage of slip-proof construction and still maintains maximum comfort which is important in the smaller size knobs. Extended plastic skirt and aluminum spun plate give this series a similar appearance to the other series listed. Color: black. Brass insert and 6/32 set screw.

	4000 Series	250 Series
Lamps:	3-5 @ 40-60 ma. per segment	2.5V @ 20 ma. per segment
Current Drain:	80 ma (min.)	40 ma (min.)
Consumption:	420 ma (max.)	160 ma (max.)
Power:	.24 watt (min.) 2.1 watt (max.)	0.1 watt (min.) 0.4 watt (max.)
Weight:	15 grams	5.6 grams
Size:	.522x1.18x1.18″	

(A) MS-4000B—7-segment incandescent readout has a bright display that is clearly read under all ambient lighting conditions. The flat, single-plane display allows a wide-angle viewing without distortion. Large character size (.325″ x .600″) relative to case size (.552″ x 1.18″). Makes use of high temperature material housed in a one-piece, black matte metal case. Terminal pine are nickel-plated brass. Lamps are closely fitted into a compartmented block with short leads virtually eliminating vibration problems. Vibration test: 2000 c/s. Lamps are separately lit to form any numeral as desired by use of an external decoder/driver. High reliability, long life #683 T-1 subminiature lamps have a life expectancy of 150,000 hours.

MS-4100—as above, but with decimal and a slightly smaller figure. External dimensions same as above.

(B) MS4100S—symbol indicator with +, −, 1, and decimal, to match either the MS-4000 or MS-4100 readout.

(C) MS-250A—smaller version of 7-segment display. 0-to-9 characters. Snap-mount socket. Plastic housing.

MS-250S—symbol indicator (+, −, 1, and decimal) mates with MS-250A.

(D) MSDD Series 7-Segment Decoder-Drivers are monolithic MSI integrated circuits which decode BCD (8-4-2-1 code) inputs to 7-line outputs representing a decimal number from 0 to 9 on 7-segment incandescent display devices. 30 mA-per-line devices are: **MSDD-700** with decimal point, and **MSDD-701** with ripple blanking; both are for use with Alco MS-250 series. 80 mA-per-line devices are: **MSDD-702** with decimal point, and **MSDD-703** with ripple blanking; both are for use with Alco MS-4000, MS-4100, MS-6 and MSM-5 series. These devices are supplied in 16-lead dual in-line plastic packages which can be used over the operating temp. range of 0°C to +75°C.

(E, F) MTX Series Decimal-to-Seven Segment Decoders are designed to drive the Alco MS-4000B and MS-250A readout indicators. The MTX Decoder consists of an integrated circuit using a unique diode matrix which allows you to ea 0-to-9 (MS-4000B), and 0-to-9 numerals plus decimal point (MS-250A) readouts plug in directly to the logic module that has connections ma a 9-conductor flat cable. The MTX-4000 Decoder and MS-4000B readou can be installed in the MS-4FB bezel and mount assembly and provides modular digits.

(G) MS-4FB—provides custom look to MS-4000 or MS-4100 readouts. Bezel has a top and bottom aluminum extrusion. Assembly provides a maximum of 5 modular digits. Rear blocks accept the sockets generally supplied with readouts. Assembly comes complete with red filter; less sockets and 1″ mounting screws. Use with clear readouts.

	MTX-4000
ALCO Readout Used:	MS-4000B
Vcc Voltage to Ground:	5.7V

ELFIN® NEON INDICATORS

Elfin is a single plane cold cathode neon indicator. 0.413″ dia. allows more figures for panel space. Character 0.433″ h. 9-Segmented MG-19 displays 0 to 9, +, −, decimal, some alpha. MG-17 has 7 segments, 2 decimals. Suitable for DC or pulsed operation. **MSDD-720** Series are hybrid BCD to 7-Output Decoder/Drivers with active high voltage outputs designed to drive segmented displays or other devices requiring high voltages and medium current-sinking capabilities. **MGDL-200** Decode/Display module with MG-19 Elfin features integrated circuit compatible 4 line BCD input. **PC-117** Power Supply for MGDL-200 provides unregulated +200 VDC for the readout and regulated +5V for the circuit requirements.

RK Series—precision machined from 1-piece aluminum which also serves as a heat sink for the bulbs. Front and rear tapped holes for mounting on a panel or on RKA-2-8 brackets. RK-FLV violet filter reduces reflected lighting for a better contrast. Unique in-line design provides clear displays without focusing problems. Compact size. Long life bulbs—20,000 hrs. Engraved acrylic plates are tightly-packed, edge-lit. **RKP Series**—plug-in readout indicators are designed for ease of use. **RKF Series**—has a larger 1-piece aluminum body with 1″ high numerals, along with 2 long-life bulbs per numeral for increased brightness. Numeral Size: 55″ h. (RK, RKP, RKF). Bulbs Used (T-1¾): #2181 (6.3V), 2182 (14V), A-24 (24V). Current Drain: 6.3V @ 200 ma., 14V @ 80 ma., 24V @ 50 ma. (RK, RKP). 6.3V @ 400 ma., 14V @ 160 ma., 24V @ 100 ma. (RKF). Body Size: 2.56 x .78 x 83″ (RK, RKP). 3.30 x 1.18 x 1.18″ (RKF).

MINIURE NEON T-1-1/8 LAMPS

smalst Neon Lamp is unique for its size bri nce. Ignition voltage is 75 VAC or VDC. urrent should be limited to 800 μA. eries sistor of 150K is recommended for 1V peration or 180K for 220V. Light out- vari ons are possible with changes in tage series resistance with resultant anges life expectancy of 10,000 hours.

odel	Description	One-24	25-99	100-499	500-999

211	Short Bare Leads	.39	.27	.24	.20

BRITE GLO® NEON LAMPS

Extremely small size lamp (equivalent to T-1 3/4). Smallest neon in the industry. Bullseye appearance gives the largest glow where needed on top. Rounded top places the illuminated area closer to the viewing point. Metal base (Model MNE-4SL) increases light output and protects lamp from damage.

Model	Description	One-24	25-99	100-499	500-999

MNE-4SL	With 10" Insulated Leads and Metal Base	.59	.39	.35	.29

PANEL MOUNTED ASSEMBLIES

PLN-100 Neon — panel mounted neon Brite Glo lamp assembly incorporates the crater electrode T-1 3/8 **MNE-4L** in a black phenolic case. It has 10" leads and mounts in a 1/4" hole.

PL-105 Incandescent — panel mounted lamp assembly is ultraminiature in size. A mate to the Brite Glo panel mounting series (PLN-100 above) only with incandescent lamp that operates on 5V @ 60 ma. and having 100,000-hr. life. Mounts in 1/4" hole; has 10" insulated leads.

PLN-100	10" Leads	Neon	.89	.59	.54	.45
PL-105	10" Leads	Incand.	.79	.53	.48	.40

REPLACEABLE LAMP ASSEMBLIES

Ultra small, Brite-Glo lamp assembly has a simple lamp replacement feature. The removable round dome lens unscrews and the tiny T-1 lamp is exposed for easy removal from the front of the panel, without tools. Standard #680 lamp rated 5 volts @ 60 ma, supplied installed. Mounts with 9/32-32 nut. Colors available: Red, Green, Blue, Yellow, or White — specify.

Model	Description*	One-24	25-99	100-499	500-999
BFK-5	Replaceable Lamp Assy.	1.29	.88	.77	.65

PILOT LIGHT ASSEMBLIES

BNE Series — featuring a 1-piece body construction, this miniature neon pilot is ideally suited to indicate toggle switch positions, or for other display configurations with space limitations. A particular characteristic of this model is the compact lens system protruding slightly above the panel. Operating voltage, 75 VAC without resistor; for 115 VAC operations use external resistors (150K for standard intensity, 33K for high intensity) not supplied. Single 5/16-32 mounting.

BNF Series — similar to the BNE Series except that the lens system extends a greater distance beyond the panel for a bright illumination. This model has a permanent built-in neon and operates on 75 VAC. An external resistor required for 115 VAC. Turret type lugs are used for simplified hookup. Single 5/16-32 mounting.

BND Series — combines an entirely new look in a space-saving pilot assembly. The neon protrudes beyond the panel to provide maximum light intensity. This model is available with or without built-in series resistor for 75V or 115V operation, and is also available as standard or high intensity. Single 3/8-32 mounting.

* Specify Choice — Red, Amber, Clear, White.

MINIATURE TRANSISTORIZED LOGILITE

ALCO FIRST — Created to provide a neon glow presentation operating from a low voltage supply source. Has a self-contained transistorized generator that provides the high voltage necessary to excite the neon. Design problems are thus simplified in computers, data processing and industrial control systems. Bushing length, 3/8" long. Dimensions behind panel, 1 3/8" less terminals. 5/8" dia. **LVN-ML-5V lens** is flat cylindrical with internal fresnal ring; specify red or clear. **LVN-SL-5V lens** is flat cylindrical lens with internal concentric circles to enhance lighting effect.

BIM-B 110V NEON LIGHT INDICATORS

General purpose panel indicators have more versatility than similar models. 8 Lens Styles: Allow a greater variety to choose from (see below). **NE2H High Intensity Lamp** is incorporated and contains built-in series resistors for 110V operation. Flexible 6" leads, tinned conductors, high temperature insulation 105°C. Black wire size: solid 22 AWG. Polypropylene indicator housing (white) with acrylic lens — available in Red, Amber, and Clear — specify. Mounts 5/16" dia. hole.

RETAINER — use of the mounting retainer supplied with each BIM indicator allows the installer to have 2 methods of panel installation. One choice is the conventional way where the retainer is pushed against the back of the panel and the indicator is placed through it. An optional choice of mounting is to fit the retainer on the front side of the panel, in a 11/32" dia. hole.

BIM-R Metal Retainer (available separately) provides a snug-fit in a minimum of space. Used only with BIM Series having a 3/16" hole mounting. Packaged, sold in multiples of 25.

Model	Description*	One-24	25-99	100-499	500-999

* Specify color: Red, Amber, or Clear.

BIM-A SERIES NEON INDICATORS

BIM-A-1

These neon light indicators, with one lens style, are described in the BIM story (at left) but are fitted with solder lugs, and body lengths are shorter. BIM-A-1 has a NE2H lamp and is for use with an external resistor (not supplied); body length is 2 1/32". BIM/4A has a NE2H lamp and contains a built-in series resistor for 110V operation; body length is 1". Colors available for both types: Red, Amber, Clear — specify. Retainer is included.

Model	Description*	One-24	25-99	100-499	500-999
BIM-A-1	Without Resistor	.69	.46	.41	.35
BIM-A-4	With Resistor	.79	.53	.48	.40

* Specify color: Red, Amber, or Clear.

MINIATURE NEON PANEL INDICATORS

General purpose sub-miniature panel indicator for use with an external series resistor. The 1-piece body houses a sub-miniature high intensity neon lamp. The metal mounting retainer push fits into a 1/4" dia. hole. Wire leads, metal retainer included. Choice of colors: Red, Amber, or Clear — specify.

Model	Description*	One-24	25-99	100-499	500-999
SM-1	Less Resistor	.89	.59	.54	.45

ELECTROMAGNETIC INDICATORS

ALLARD INSTRUMENT

Designed for compact instrument and control panels, Allard miniature electromagnetic indicators provide positive visual signaling, are not subject to burnout, assure high readability in strong incident light. One-piece balanced rotor for dependable performance under shock and vibration. Models for momentary or latch g operation, from DC or rectified AC. All models can e supplied to meet particular requirements for operat g voltage, type of display and mounting, to commer or MIL specifications.

NEW!

TYPE 130

Tiny indicator, totally enclosed structure. Rotation up to 60°. CW or CCW. For use with plug-on (demountable) flags. Operates in any position. Case size 7/16" OD x 25/32" L.

NEW!

TYPE 129

Shorter version of the Type 104 and just as powerful. For CW or CCW rotation using demountable flag arms. Rotational angles to 60°. Works in any position. 7/16" diam. x 3/4" long.

NEW!

TYPE 124

Miniaturized version of Type 104 with rotation up to 45°. Available with CW or CCW rotation. For use with plug-on (demountable) flags. Operates in any position. Case size — 3/8" O.D. x .575" long.

TY

Relatively inexpensive rsi of our old Type 101. C di play legends on the dru fa or rotate a flag arm / CCW. Two position mor ta or latching operation. In ato drum is .300" wide x 30 diam. Total length is 1 .

TYPE 120

Tiny broad faced indicator available in 2- or 3-position momentary or 2-position latching indication. Capped or sealed. Shows colors or legends. Head is 9/16" wide by 7/16" high. Body 1/2" dia. Overall length 15/16".

TYPE 108

Small indicator for 2- or 3-position momentary or 2 position latching (memory) indications. Plastic head can pipe external light to indicating face. Colors or legends as required. 1 1/8" long, 3/8" dia., 7/16" square head.

TYPE 110

Extended face indicator, permits display of complete words or multiple symbols. For 2- or 3-position momentary, or 2-position latching indication. Plastic capped for dust and moisture protection, or hermetically sealed. Length 1 3/4", head 1" by 3/4".

TYP 10

Two or three position sli ind cator for narrow location Ca supply power to rotate fla arm up to 60° or can dis y legend directly on rotor ac CW or CCW for two p tio operation. .270" x .562" 1

Types	129	108	109	110	120	130	219	1

ELECTROMECHANICAL READOUTS

High Visibilit! Inherent Mer

A wide variety of other sizes available in single and multi-unit packages.

TYPE 213

Compact digital indicating modules for instrument, data presentation and other display systems. Seven electromagnetic indicating segments can be operated in any desired combination by low power DC signals. Momentary or latching types. Windings for a wide variety of DC voltages. 1 1/16" h. x 5/8" w. x 1 5/8" d. Digit size: 1/2" h. x 3/8" w. Less than 0.03 sec. operating time.

TYPE 1218

Complete readout display operating as remote repeater of cash register readings. Contains readouts, encoding matrices, pulsing and cycling circuitry and its own power supply. Use of latching (memory) type readouts makes average power consumption negligible. Packaged for all-weather, outdoor use. Uses 4 Type 218 readouts, 4" high.

MINI-BRITE "simplicity" in subminiature indicator lights

MINI-BRITE 75001 Panel mount

MINI-BRITE 75002 Panel/Printed Circuit Mount

MINI-BRITE 75003 Printed Circuit Mount

MINI-BRITE subminiature indicators have been engineered and manufactured with the idea of achieving the ultimate simplicity, standardization, reliability and cost efficiency . . . this has been accomplished by the design unique housing and contact arrangement centered on use of standard, wire terminal lamps . . . which provides intensity comparable to units five times their size.

MINI-BRITE subminiature indicators feature unique design characteristics which will offer maximum advantage to the equipment designer . . . such as —

- **Standard Lamps Simple Plug-in Installation**
- **Optional Wiring and Mounting Types**
- **Hi-Density — Low Weight Design**
- **Coded Caps • Letters Numbers • Symbols**

HOUSING GUIDES LAMP LEADS TO CONTACTS

Housing is keyed so that wire leads of lamp will only be accepted by the electrical contacts.

MINI-BRITE SPECIFICATION

BUCKEYE

KNOBS

Your instrumentation can now be greatly enhanced by the use of a harmonizing style of the uniquely designed Buckeye Matching Instrument Knobs. They're available in six attractive styles in four stock colors, and in six basic sizes.

This "MATCHING INSTRUMENT LINE" features single-round, concentric, bar and half bar, spinners, pointers and skirted knobs with numerous variations. Molded of Cycolac, Buckeye knobs are noted for their toughness, rigidity, dimensional stability, high gloss and resistance of stain, weather and heat. They are fitted with metal bushings and 2 set screws. All caps are spun aluminum and are corrosion protected by anodizing.

bord-pak®

NEW
½" spacing also available

CIRCUIT BOARD GUIDES are a time and labor saving innovation for packaging integrated modular circuitry. The Cycolac guide is molded into a single section with 12 tracks, spaced 11/32" apart with ventilation slots for safe maximum density circuit card packaging. The mounting shelf and clamp design assures quick and positive alignment of connectors with only three bolts. Guides are available to accept either 4½" or 6" length etched or printed circuit boards. Module spacing and design other than standard is available on quantity orders.

cases

Bord-pak cases are designed in three popular funct
to facilitate economical assembly of standard 4½" cir
The recessed satin anodized front panel and polis
num frame trim harmonizes with the "over-tone" g
grain finish to give extra attractiveness to any finishe
assembly. Bottom is provided with safety snap ele
and nylon feet. Internally the cases are designed to
two, four or six Bord-pak sets.
The overall sizes range from 5 5/16" wide x 5 5/16" hi
deep to 15 7/16" wide x 5 5/16" high x 11 3/8" deep.

rack

The popular Buckeye Bord-pak rack is offered in four
sizes — for 1, 2, 3 or 4 Bord-pak circuit guide set

TWX: 910-221-5445

A GENERAL INSTRUMENT COMPANY

M2 SERIES T-1 BRITE LITES

FEATURES:

CM25 Series Brite-Lites are subminiature T-1 indicators built to meet MS90308. An unbased T-1 lamp is inserted into the housing and a cap snapped-on to hold the lamp and provide color identification.

New features include dimpled terminals (patent pending) to assure positive electrical contact together with internally flared lead guides for ease of lamp insertion. Hot stamped legends can be provided with the new cylindrical cap style. The units are small enough to mount on .250″ centers and still allow adequate wiring room and space to re-lamp.

M2 SERIES T-1 PEANUT-LITES

FEATURES:

T-1 Peanut-Lites are a new approach to the ultra-miniature panel indicator applications. Each T-1 Peanut-Lite contains a subminiature lamp sealed in a high-temperature polycarbonate housing. Lamps are available in a wide range of voltages from 1.5 volts to 28 volts. Mounting is easily accomplished with spring mounting clips.

Strain relieved wire leads are available when soldered connections are required. Pin contacts can be supplied for "quick-disconnect" with the CM21-1 socket. Where circuit board mounting is required, a 10384 clip is available.

T-1 Peanut-Lites are low cost commercial substitutes for MS25446 and MS90308 indicators.

ML SERIES TRI-A-LITES

FEATURES: Chicago Miniatures new Tri-A-Lites offer a unique and new approach to lighted indicator devices. All Tri-A-Lites appear white in the off position, and take on color only when an input voltage is applied to one of the color coded lead wires. With the use of long life T-¾ lamps, three colors can be obtained from a single indicator light while allowing the designer to use the minimum amount of panel space. Tri-A-Lites mount in 19/64″ clearance holes and are retained with a single mounting clip. The standard color combination is red, green, and yellow but other combinations are available. Options include: hot stamped legends, other color combinations, different lead lengths and clear anodized housings. Electrical characteristics are: Volts — 5.0; Amps — .11/Lamp; Life — 15,000 hours average; Activated Colors — red, green, yellow.

M2 SERIES SUBMINIATURE LENS END-LITES

FEATURES: The CM20 family offers a variety of Lens End-Lites, each with finely controlled characteristics for the most demanding optical applications. Spots produced by these assemblies are axially centered, which minimizes adjustment problems and simplifies lamp replacement.

The CM20 Series family is ideally suited for close proximity use with photo sensors where an intense spot of luminous and infrared energy is required. Typical applications are encoders, tape sensors, card readers and optical scanners.

The CM20-1 and CM20-2 are mounted in CML Series Cartridge Holders. CM20-3 and CM20-4 are packaged in gold anodized aluminum sleeves.

Part Number	Current Design Design Volts	±10% (Amps)	Average Life (Hours)	Spot Specifications
20-1	2.50	.350	10,000	When projected 3/8″ from end of bulb, spot produced covers a 1/8″ diameter target which is concentric with the axis at a minimum intensity of 750 foot-candles.
20-2	3.00	.325	10,000	1″ diameter spot at 1″ with minimum intensity of 350 foot candles at 3.0 V.
20-3	2.50	.350	10,000	When projected 3/8″ from end of bulb, spot produced covers a 1/16″ diameter target which is concentric with sleeve. Intensity 3/8″ from bulb is a minimum of 750 foot-candles measured over a 1/16″ diameter circle. Spot is narrow elliptical in shape.
20-4	2.50	.350	10,000	Same as CM20-3 except spot covers 1/8″ diameter target. Spot is "round" elliptical in shape.

M SERIES CARTRIDGE INDICATORS

FEATURES:

Cap colors include: red, yellow, white, blue, green and amber. Available both in transparent and translucent colors. Cap materials: Polycarbonate; resistive to color fading and high temperature and Butyrate; color matched to standard industry colors. Legends are hot stamped. Lamps: Any T-1¾ Incandescent. Mil-Spec: Built to meet Mil-L-3661. Polarization: Stainless steel pins are located off-center. This provides polarization or one way insertion in Cartridge Holders.

M SERIES HIDE-A-LITES

FEATURES:

Hide-A-Lites are a new concept in panel and display lighting. All indicators appear **white** in the off position and **take on color only when activated.** When mounted in multiple indicator panels, a glance is all that is necessary to quickly ascertain which indicators are on. Hide-A-Lites are ideally suited for use as warning lights or on systems control panels where signal and indicator speed is important. Their esthetic value is also of importance to design engineers concerned with panel appearance.

Special Housings and Assemblies May Be Designed to Customer Specifications.

For Complete Specifications on Chicago Miniature Lited Devices, Request CML Series Catalog.

DACO Miniature Fail-Safe Indicators for aircraft, spacecraft and ground support instrumentation.

Typical models among the many varieties of miniatur fail-safe indicators provided by DACO. Left: extende shaft indicator. Top center: internal flag indicator. Cente external shaft indicator. Bottom: rotating drum indicato Right: servo mounting indicator.

High reliability • Extreme ruggedness Positive indication • Widest selection of models, sizes, message and mounting

DACO Solenoid-Actuated Fail-Safe Indicators offer a combination of advantages that has made them the standard with leading international instrument manufacturers. Designed and built specifically to meet the exacting demands of aerospace instrumentation, the indicators are widely used in commercial and militar aircraft. Specially designed DACO indicators ar being used in a number of space projects. In additio to their many applications in general system annun ciation, they are used for sun-shutters, video ligh sensors and photocell interrupters in spacecraf optical systems; digit maskers, request-action indi cators and special system condition indicators.

	Size 5	Size 6
Weight (without flag or mounting bracket)	4.5 grams	9 grams
Dimensions (without flag or mounting bracket)	Length—0.57 in Diameter—0.38 in	Length—0.82 in Diameter—0.44 in
Power input range	DC—0.5 to 1 watt @ 25°C AC—0.7 to 1.3 watt @ 25°C	DC—0.4 to 1.3 watt @ 25°C AC—1.2 to 1.8 watt @ 25°C
Operating voltage	DC operation: up to 45 volts AC operation: 26 and 115 volts 400 Hz	
Rotation	Up to 60° CW or CCW. Standard tolerance ±2.5°	
Response time	0.5 seconds maximum	

For additional details, complete specifications, dimension drawings and ordering information, ask for DACO Bulletins 100-104.

DACO Miniature Latching Indicators

Highly reliable, extremely rugged, and positive indicating, these 2-position electromechanical latching indicators are widely used for visual indication of transitory circuit conditions, registering and holding "over-temperature" and "G-level" indications, monitoring firing circuits, and many other applications. Operating

voltage is up to 45 VDC continuous, anc input power is 0.75 watt at 25°C. Available with external switch, actuated by the rese button, for a secondary circuit. *For additional details, complete specifications dimension drawings and ordering information, ask for DACO Bulletin 105*

DACO™

THE REVOLUTIONARY METHOD FOR MARKING ELECTRONIC EQUIPMENT

JUST RUB and it's PRINTED!

Sharp • Clean • Fast • Not a Decal • No Water • No Tapes

INSTANT LETTERING® marking kits bring you all the necessary elements for completely marking electronic equipment, prototypes, drawings, etc. in this fast new easy-to-use form. There's even a new drafting symbol kit for better more readable schematics.

Words, letters, numerals, switch patterns, arcs, drafting symbols, etc. are printed on a special transparent carrier film. Rubbing over one of these elements with a ballpoint pen releases it from the carrier film and adheres it to your working surface.

INSTANT LETTERING® words and symbols transfer to almost any surface including glass, plastic, even painted and bare metals. Now you can quickly mark all panels, even especially calibrated two-color nomenclatures, pilot light jewels, sub-assemblies, circuit boards, etc. Reproduction quality **INSTANT LETTERING®** transfers are clean and sharp, leave no background haze or film, make prototypes look like finished production equipment and give all equipment and drawings a professional look.

DRY TRANSFER MARKING KITS

TITLES for ELECTRONIC EQUIPMENT

NEW, REVISED; Now 20% more titles in a new easy-to-read typeface. Researched to give up to 95% of all electronic marking. For labeling, marking, titling all electronic control panels, drawings, prototypes, etc.

No. 9581—Complete Set (black)	**$5.95**

METER & DIAL MARKING KIT

Arcs, dial patterns, lines, wedges, graduation lines, switch symbols alphabets and numerals in black, white and red for marking standard and special rotary tap switches, potentiometers and prototype and specially calibrated meter dials. Colors provide contrast on scales and switches, simplifying usage of complex instruments.

No. 968—Complete Set	**$5.95**
REFILL SHEETS—set of four identical sheets	
No. 968R—(specify sheet number)	**$2.00**

ELECTRONIC SYMBOL DRAFTING SET

The quick way to more readable schematics. Contains 40 sheets of electronic symbols plus letters and numerals. Symbols designed to conform with MIL-STD-15-1A. Sheets have heat resistant adhesive for perfect reproduction in any blue- or white-printer. Also included is a complete guide to drawing with dry transfer symbols.

No. 970—Complete Set	**$19.15**
REFILL SHEETS—set of four identical sheets	
No. 970R—(specify sheet number)	**$2.00**

LOGIC DIAGRAM SYMBOL SET

NEW! The most modern and effective aid to drawing logic diagrams. Symbols transfer to your drawing in seconds. All you need do is add the connecting leads. Heat resistant adhesive allows perfect reproduction even in diazo and other high speed printers. Symbols conform fully to MIL-STD-806B and ASA-Y32.14.

No. 971—Complete Set	**$4.20**
REFILL SHEETS—set of four identical sheets	
No. 971R—(specify sheet number)	**$2.00**

NW JOTDRAFT SETS

1 sets of logic, schematic, component rted circuit symbols. Each has a clear, astic overcoat that transfers with the Tough! Scratch Resistant! Use with ape and ink. Suited for mylar, stan- ting vellums. All kits $6.50 each.

r — Clear protective coating specifically to protect "Instant Lettering" transfers sion and weathering. Datakoat is water- dries quickly.

Coating Kit — contains a 1 oz. bottle of with applicator brush in cap and a 1 oz. hinner.

.....$1.00

atings — the handy aerosol can form of (16 oz. cans).

— Glossy $2.95

— Matte $2.95

STANDARD SHEETS — Full 10" x 15" sheets of alphabets and numerals are available in over 80 different type faces in sizes ranging from 8 pt. to 288 pt. Also available are arrows, math symbols, line and dot rules, etc. All are available in black, many also come in white and all feature heat resistant adhesive. Free sample and complete type chart available upon request.

SPECIAL SHEETS — Sheets made to your own specifications can include logos, drawings, symbols, preset words — anything that you use repeatedly. Hundreds of lettering and marking problems that were impossible or too expensive become practical with "Instant Lettering". Tell us your problem and let us suggest a "dry transfer" solution.

LETRATAPES — Here's a revolutionary advance in the application of dry transfer component references. The special dispenser does half the job for you. The range of tapes comprises 122 different items including letters of the alphabet, numerals, 0-9, common component designations, frequently used preset words, etc. Letratapes provide an ideal method for a wide range of repetitive marking or coding jobs. Write for complete details.

SPECIAL LETRATAPES — Tapes can be made to fit your own specific needs. Items like company trade marks, technical symbols, frequently used words and phrases —whatever you need—prepared as dry transfers on rolls of tape for fast, easy application. Complete details available upon request.

*Recommended for neon C-Lites

DH SERIES - TYPE DHS MOMENTARY SWITCH-LITE

Rear mounting, 3/8" hole
Mate with CF, CG and CR C-Lites

DHS-60B-A-D16B with CF03
Black anodized finish

DHS-60B-A-D16B normally open
DHS-60B-B-D16B normally closed
DHS-60B-P-D16B press-to-test

Black or clear finish — specify B — black, S — clear (underlined letters in part numbers by illustrations, 2 places)

DH SERIES - TYPE DHT MOMENTARY SWITCH-LITE

Front mounting, 15/32" hole
Mate with CF, CG and CR C-Lites

DHT-61S-A-D16S with CF03
Clear anodized finish

DHT - 61B-A-D16B normally open
DHT - 61B-B-D16B normally closed
DHT - 61B-P-D16B press-to-test

Four lug terminals — separate light and switch circuit — 1/2 amp rating for normally open and closed types.

DH SERIES - TYPE DHF DUAL LAMPHOLDER

Front or rear mounting 3/4" hole.

DHF-61B-D17BWC

Mates with any two CF, CG, or CR C-Lites. Four lug terminals — clear lens. Black anodized finish.

DN SERIES SINGLE LAMPHOLDERS

Rear mounting 3/8" Hole.
Mate with CN neon C-Lites

DNO-10B-D14B with CN01

Slightly longer than DHO holder, otherwise identical and specified in same manner except use DNO instead of DHO. Rear mounting 3/8" hole only.

DL SERIES SINGLE LAMPHOLDERS

Rear mounting 3/8" Hole.
Mate with CL24 C-Lites

DLO-10B-D09BWC

Medium length holder for high voltage incandescent CL24. Specify in same manner as DHO — requires lens cap.

DM SERIES SINGLE LAMPHOLDERS

Rear mounting 3/8" Hole.
Mate with CM65 C-Lites

DMO-10B-D06BRT

Long length holder for high voltage CM65 C-Lites. Specify in same manner as DHO — requires lens cap.

ELDEMA
INDICATOR LITES

R — LITES

R-Lites are Eldema's product family of relampable holders and lens caps for midget flange based T-1 ¾ incandescent and T-2 neon bulbs. The lamps and l caps are replaceable from the front of the panel. There are five R-Lite groups each with its own features — the holder and lens cap part numbers in each gr start with the same two letters to insure mating parts.

RM AND RN SERIES

The RM-RN groups meet MIL-L-3661 and MIL-L-6723. The RM is incandescent lamps — the RN Series with a built in resistor is for n lamps. Standard types RMA and RNA — waterproof types RMW RNW — two tin plated lug terminals — black anodized aluminum cases high impact plastic lenses. Mount from the front in 15/32" holes.

LOGIC-LITES

Indicator lights with built-in transistorized lamp driver networks. Available in neon and relampable incandescent types for operation from IC and discrete component circuits. Matching indicator lights and switchlites are also available. Contact Eldema for more detailed information.

HL-LITES

Eldema Series HL holders and lens caps are for sub-miniature based T-1 incandescent lamps. Military type construction — brass housing — either single or two terminal style — relampable from the front of the panel — mount on centers as close as 0.360. RFI/EMI shielded versions available-see H-Lite brochure.

T-SERIES

Eldema T-Series lampholders and lens caps are for the T-3¼ bayonet based in- descent and neon lamps. Four basic types — TAF and TCF for incandescent TAG and TCG with built-in resistors for neons. Meets Mil-L-3661 — polis chrome, black nickel or bright nickel finish — front mounting in 11/16" h water proof types — lug or screw terminals.

TCF-6220-TC222RC

TAG-6032-TA263CD

TAF-7020-TA160AT

TAF-6030-TA120RT

TAF-7030-TA243RT

TAF-6030-TA223CD

HOLDER STYLE

TAF - Incandescent lampholder Screw-in lens caps

TAG - Neon lampholder Screw-in lens caps

TCF - Incandescent lampholder Screw-on lens caps

TCG - Neon lampholder Screw-on lens caps

NOTE: TAF and TAG holders mate with lens caps starting with letters TA. TCF and TCG holders mate with TC lens caps.

HOW TO SPECIFY HOLDER FEATUR

Example — 6010

First digit: (Terminals)	6 = Solder lug 7 = Screw terminal
Second digit: (Mounting)	0 = Standard part 2 = Water proof
Third digit: (Finish)	1 = Bright nickel 2 = Black nickel 3 = Polished chrome
Fourth digit: (Resistor)	0 = None (TAF & TCF) 2 = 27KΩ for NE51H lar 4 = 56KΩ for NE51 lamp 7 = 100KΩ for NE51 lam 25,000 hour life ratin

SCREW-IN LENS CAP STYLE

TA120	- Smooth dome — clear or translucent colors
TA130	- Fluted dome — clear colors only
TA140	- Semi-Fluted dome — clear colors only
TA160	- Flat top — clear or translucent colors
TA223†	- Convex — clear or diffusing colors (no cloudy clear)
TA243†	- Flat top — clear, translucent or diffusing colors
TA263†	- Smooth dome — clear or diffusing colors (no cloudy cle
TA283†	- Fluted dome — clear colors (no cloudy clear)

SCREW-ON LENS CAP STYLE

TC223†	Smooth dome — clear or diffusing colors (no cloudy clear)
TC243†	Fluted dome — clear colors only (no cloudy clear)

† These lens caps have a metal ring with polished chrome finish specified by the digit 3, or bright nickel, change to 1, black nickel, change to 2. For example: TA221RC and TC242C.

To specify water proof lens caps in the TA styles change the first digit as follo TA100 series to TA400, TA200 series to TA300. For example: TA120RC to TA420R Standard TC lens cap may be used. All necessary sealing gaskets are on the TC hol when it is specified water proof.

LENS COLORS

RFI/EMI SHIELDED INDICATOR LITES

Special lens caps with internally retained wire mesh cloth used in lampholders with a conductive finish provides effective attenuation for interference shielding requirements. Shielded versions of most Eldema products are available and match the standard units. Contact Eldema for the technical bulletin covering complete RFI/EMI tests and results of these shielded indicator lights.

CR103 TYPE C SQUARE INDICATING LIGHTS

Full-voltage type

Transformer type

CR103 C square indicating lights are designed for wide variety of applications such as: business operator panels, consoles, control desks, motor contr and for the panel building, electronic and intrumenta

Full voltage and transformer types in a variety of available. Lenses may be translucent type or transpa used with a diffuser. Legends can be engraved and translucent lenses.

Write for Bulle

CR103 TYPE D INDICATING LIGHTS

With solid lens cap installed

Solid or split color fields give added flexibility. Colors can be mixed in the split field forms for even more combinations.

General Electric's new line of CR103 Type D indicat are designed for a wide variety of applications such and instrument panels, office machines, laboratory ins computers and other data processing equipment. illuminated push button switches are shown in Sect on page of General Electric switches.

FEATURES

- Units snap into panels from front without tools, and ca mounted horizontally to save space or for group functions
- Convenient slide-on lens caps in five colors; four hous Units are single button only. and have solid horizontally- or split color fields. 2-lamp and 4-lamp forms are available.
- Legend inserts for all forms can be printed or engraved or similar material of 10 mils or less thickness.

Fig. 5 Fig. 6 Fig. 7

Fig. 9 Fig. 10

Illustrations Actual Size

SUB-MINIATURE LAMPS

(Top Section of chart at right.) Designed for maximum service life under conditions of shock and vibration. Will not introduce noise into audio circuits. Manufactured and tested to rigid quality control standards.

"TU-PIN" SUB-MINIATURE LAMPS

Ideal for printed circuits and transistor sockets. Bases color coded to electrical characteristics. Easy to insert and remove, especially in difficult locations. So small twelve can be mounted in one square inch.

MICRO-MINIATURE LAMPS

(Lower Section of chart at right.) Design lives of 100,000+ hours is common. Tipless bulbs for undistorted end viewing. Pre-aged and photometered to assure reliability, stability, and electrical accuracy.

Ask for Catalog #106

REPLACEABLE ILLUMINATOR FOR EDGE LIGHTED PANELS

The Hudson Disc Lamp is an integral light source for edge lighted panels. Easily installed or removed from companion socket hard mounted to a one piece panel. Ask for Bulletin #301. T.M.

HUDSON DISC LAMPS

ENGINEERING ASSISTANCE

If you have an application for which no standard lamp is suitable, Hudson will design and manufacture a special lamp to meet your requirements. Please ask us for recommendations, which are furnished to you without obligation, of course.

Designers and production men prefer these dependable incandescent lamps for use in aircraft computers, read-out devices, edge-lighted panels, switch buttons, instrument pilot lights, and similar space is limited, replacement difficult, and reliability essential.

IEE Subminiature Incandescent Lamps

Hand workmanship insures accurate filament location and superior mechanical characteristics. • Handblown, seamless and tipless envelope provides unmatched clarity. • Machined bases for precision fit. • All lamps aged to stability and selected to insure long life and uniform brightness. • Cost savings as much as 40% below competitive manufacturers.

Orders for any one T-size lamp may be grouped for best price.

		Lamp No.	Volt	Amp	M.S.C.P.*	Average Life (Hrs.)	Price** (Each)	
T 7/8 LAMPS BASED		1	5	.115	.132	40,000	.44	A totally new lamp designed and developed by IEE. Now being widely accepted throughout the industry as a standard. This lamp offers all the features of a standard T1 lamp but requires much less space. Supplied in both standard types and commercial types for low cost applications.
		A3	14	.04	.132	16,000	.588	
		A5	12	.06	.132	16,000	.588	
T 7/8 LAMPS UNBASED		3	5	.115	.147	40,000	.35	
		AU3	14	.04	.147	16,000	.49	
		AU5	12	.06	.147	16,000	.49	
T 1 LAMPS BASED		685	5	.06	.048	100,000	.417	IEE offers price savings of up to 50% on T 1 lamps, and at the same time provides higher quality. This includes aging and selection as a standard at no increase in price. Aging and selection provide a lamp with much longer life and more uniform light.
		714	5	.075	.080	60,000	.417	
		718	5	.115	.132	40,000	.417

REAR PROJECTION READOUTS—MODELS TO MEET EVERY APPL

- SINGLE-PLANE PRESENTATION for crispness, not visual "hash."
- BOLD, BRIGHT DISPLAYS for high readability at wide angles, long distances, in brightest light. (Character brightness up to 100 foot-lamberts.)
- FROM 11 TO 64 MESSAGE POSITIONS per readout. May be displayed individually or in combination.
- NO MOVING PARTS for unlimited unit life; easily replaceable lamps provide up to 240,000 hours of operation per lamp.
- LOW VOLTAGE OPERATION.

DICATOR LIGHTS

MINI-SLIDE

PILOT LIGHT ASSEMBLIES

Model 3060 Series

lens shapes, round and square for nd series.

"Pilot" lamps including 120 and "Indicator" lamps.

Model 2800 Series

- Screw-in design for easy relamping from front of pane.
- Unique torque-limiting, self-locking nylon mounting nut.

INDIVIDUAL SOCKETS
MULTI-SOCKET STRIPS • END CAPS

- Round and rectangular single sockets.
- Socket strips of 12 sockets on ½" or ¾" centers, individual or common ground.

- ctive on or off. Uniform brilliant light.
- omical yet reliable and rugged.
- es in a full range of colors.
- to install with push-on speednut mounting, simple panel aration. Keyed to prevent rotation.
- es can be imprinted.
- Easy relamping from front of panel. No special tools needed.
- Lamps are extreme long-lived, rugged, reliable, available from 4 volts to 120 volts.
- U.L. approved (phenolic sockets) for 120 volts.
- Either solder or use quick-connect receptacles.

LIDE-BASE LAMPS

ine of rugged, long-life miniature incandescent lamps is available to fit Industrial Devices individual and multi-socket strips. Several ered to cover a wide range of voltages up to 120 volts and ratings up to three watts. Lamps are available in two lengths; the shorter "Indi- e longer "Pilot" lamps.

MINI-CATOR

MINIATURE INDICATOR LIGHTS

For use in electronic instrumentation, computers, display panels, precision machinery and electronic equipment in general — including military applications. Neon models available for 65 VAC (90 VDC) and over, with or without built-in resistor. Incandescent models available for 6.3V-.20A, 14V-.08A and 28V-.04A, as well as other voltages and currents. MINI-CATOR consists of replaceable lamp cartridge and mating lampholder. Lamp cartridge has nylon body for long-life ruggedness. Lampholder with built-in resistor for neon cartridges available.

- Lens available in variety of colors, with or without imprints.
- Lampholders mount in ⅜" hole for space economy.
- Lamp cartridge may be mounted directly in 19/64" dia. hole with mounting clip and lamp connector.

specials . . . of every description

IDI specializes in designing or adapting pilot lights to particular specifications. Lights can be provided as complete assemblies to meet circuit design requirements — a capability that can drastically reduce cost by eliminating delicate assembly of resistors, capacitors or diodes. Whatever your requirement, special pilot light or pilot light assembly, IDI progressive manufacturing techniques and engineering capabilities will provide quick, economical service.

INDUSTRIAL DEVICES, INC.

Phone: 201-943-4084

THE MOST COMPLETE LINE OF DIGITAL DISPLAYS, COUNTERS, PRESET COUNTERS, CLOCKS, ANNUNCIATORS AND COMPATIBLE POWER SUPPLIES IS NOW AVAILABLE FROM A SINGLE SUPPLIER.

mini-digit

DECODE DISPLAY ASSEMBLIES–UNI-DIRECTIONAL COUNT DISPLAY ASSEMBLIES

MD SERIES—DECODE DISPLAY

The Mini-Digit decode display assemblies provide decimal readout on cold cathode display tubes directly from BCD inputs at typical I.C. voltage levels.

KEY SPECIFICATIONS

- **Compact, attractive front bezel**
- **Long life cold cathode tubes mounted to provide excellent wide angle viewing.**
- **Single printed circuit finger connector.**

MDM SERIES DECODE DISPLAYS WITH MEMORY

These units are also available with a memory buffer stage and are useful when a constant unchanging display is required, while the input changes.

KEY SPECIFICATIONS

- **BCD output available from the storage stage**
- **BCD inputs from DTL or TTL circuits.**
- **Decimal point in every position**

MDC SERIES COUNT DISPLAY

The Mini-Digit count display assemblies are uni-directional counters capable of a 2 MC count rate. As input pulses occur they are displayed directly on a cold cathode display tube.

KEY SPECIFICATIONS

- **BCD outputs available from the counter**
- **Reset to zero circuits**
- **Simple installation. Only one input and reset line needed regardless of the number of decades.**

MD

MDCM SERIES COUNT DISPLAYS WITH MEMORY

These units are also available with a memory stage permitting the readout to directly follow any input pulses or to display the previous number while still monitoring the count input.

KEY SPECIFICATIONS

- **BCD outputs available from the memory stage**
- **2 MC count rate**
- **Plus/Minus sign option available.**

MDC

PRESET COUNTER–BI-DIRECTIONAL COUNT DISPLAY ASSEMBLY

MDP SERIES

The MDP series of uni-directional counters feature a built-in preset comparator circuit set by individual thumb wheel switches. The entire unit is mounted in a standard compact I.D.I. bezel housing with the preset thumb wheels positioned on the right side of the readout. From 2-5 decades are available in this series which will give an output when the predetermined point set on the thumb wheels is reached. The digital display follows any changes at its input and can be wired to hold the count at the preset point, or continue to monitor the input.

KEY SPECIFICATIONS

- **Entire unit mounted in standard I.D.I. bezel housing.**
- **Available from 2-5 decades of counting display**
- **Preset point set in on thumb wheel switches**
- **BCD outputs available from the counting stage**
- **Coincidence signal at preset point**
- **Zero reset**
- **Extremely compact unit**
- **Fast, simple mounting**

MDBC SERIES

The MDBC series of Bi-directional counters accept pulse rates up to 15 MC and provide decimal readout on cold cathode display tubes. Input is on 2 lines—one line is for input pulses and the other determines count direction. With the count direction line "low", pulses are considered subtractive and when "high", they are additive. With an optional quadrature input card the counter will accept input in quadrature form typical of most transducers.

KEY SPECIFICATIONS

- **Any number of decades from 2—6**
- **BCD output available from the counter stage**
- **Preload input feature in BCD form enables the counter to start accumulating pulses from either zero or any other number**
- **Optional ± sign**
- **Compact attractive unit with bezel customizing capability.**
- **Single printed circuit finger connector**

MDP

MDBC

DIGITAL PANEL METER

MDPM-B BI-POLAR SERIES

The mini digit series of digital panel meters are 3 1/2 digit units providing decimal readout on cold cathode display tubes direct from an analog input. They are available in 5 voltage and 5 current ranges and feature bi-polar operation with BCD outputs.

MOUNTING

The size of the MDPM series is 2.4H x 3.6 D x 3.8 W and weighs only 14 oz's. A rugged extended aluminum shielded assembly houses all the electronics and provides for a fast simple means of mounting the unit. All input/output is on a single rear gold plated printed circuit finger connector: the front bezel as with the entire IDI line of displays has an added feature of allowing the user to customize the front bezel with their logo, or unit function and provides excellent wide angle viewing up to 160°

KEY SPECIFICATIONS . . .

- **Bi-polar operation**
- **Buffered BCD outputs plus overrange and polarity bits**
- **100 % overrange**
- **Compact size 2.4H x 3.6D x 3.8W (3 1/2 digits plus sign)**
- **Remote triggering**
- **Latching non blinking cold cathode tube display.**
- **Built-in power supply**
- **Indicator provided when unit exceeds its range**
- **Accuracy 0.1% ± 1 digit**
- **High input impedance**
- **Single printed circuit board connector.**

MDPM-B

DIGITAL ANNUNCIATOR

MDDA SERIES

The MDDA series of digital Annunciator's combine in one compact package both alphanumeric and numeric display in any combination.

KEY SPECIFICATIONS

- **Cold cathode display tube for both alpha and numeric characters.**
- **operates from 5 volt logic**
- **simple fast mounting**
- **unique mounting provides excellent wide angle viewing.**

POWER SUPPLY

The Model PS2A power supply provides in one compact package both required voltages for I.D.I.'s. line of displays, 200 volts and 5 volts. The 200 volts is at 50 ma unregulated and the 5 volts at 1 amp regulated.

DIGITAL CLOCK DISPLAY

MD600T SERIES—6 DIGIT CLOCK

The Mini-Digit digital clock accepts BCD data and displays it as decimal time of day. The MD600T displays time in hours, minutes and seconds

KEY SPECIFICATIONS

- **Input in BCD form at typical IC voltage levels.**
- **Complete packaged unit provides fast easy mounting**
- **long life cold cathode display tubes**

JACKSON BROS. (LONDON) LTD.

TUNING CONTROLS/DRIVES/ TERMINALS MADE IN ENGLAND

16. Ball Drives Powerful Precision Epicyclic 1/4″ base, 1/4″ shaft concentric 6:1 ratio. 1 3/32″ diameter steel cage. 4511 basic design; 4511 F with flange for dial.

Dual Ratio Ball Drives As above but with 2 ratio reverse vernier action 6:1, 36:1.

17. Adjustable Torque Ball Drives As above but in precision machined aluminum housing 1 1/2″ diameter and adjustable spring tension, 6:1 or 6/36:1 available.

18. Mini Ball Drive To fit 6mm shaft designed for use with plastic film variable capacitors or any other. Front area 31/32″ x 63/64″.

19. Epicyclic Drives 3/8″ 1 hole fixing, 5:1 ratio. Various arrangements; Direct-slow R.V., Slow through spindle or Direct-slow R.V. Cord Drive.

20. D Type 2 Speed Drive 1 1/2″ diameter flange aluminum knobs. Universal joint shaft coupling; 4 1/2:1 ratio.

21. Spinwheel Drive Various designs including Ball Bearing, Nylon Bearing, Plain Bearing Spindles grooved for Cord Drive. Plain available. Flywheels 1 3/4″ or 2″ diameter lead, 2 1/4″ diameter zinc.

22. Cord Drives Various silky action lubricated Plain Bearing Spindles with cord grooves. Plain Spindles available.

23. Universal Couplings Constant velocity shaft Couplings. High Torque. Compensates both linear and angular. Insulated by rigid moulding. 4693 1 3/8″ diameter for maximum flex, 5610 3/4″ diameter for minimum size. **Solid Brass Couplings** and extension spindles also available.

24. Ball Drive Dial 6:1 Ball Drive, 4″ diameter aluminum scale 0-100, reversable other side plain. Fits external to panel.

25. Caliband Drive Dual control, 2 pointers 6:1 search 48:1 bandspread escutcheon 7 7/16″ x 4 1/4″ overall.

26. SL15 Slide Rule Drive 10:1 ratio. Escutcheon 7 1/4″ x 2 5/8″ overall. Calibrated 0-100 with provision for logging.

27. 6/36 Drive Uses Ball Drive Type DR 6/36:1 ratios. Escutcheon 4 5/8″ x 3 1/2″ overall.

28. Gear Drives Types G1 56.25 precise ratio. Type G4 75:1 with friction first driver shaft. Both backlash free; all Ball Bearing Spindles. Front area 3″ x 2 7/8″. Depth 1 19/32″.

Type G80 Concentric friction input geared output. Front area 2 1/4″ x 1 7/8″. Depth 3/4″.

29. "Pot Lock" Spindle Lock Fits 1/4″ spindle, secure, stress-free locking.

30. Drums Fit 1/4″ shaft (or other to order) overall diameters 1 1/4″, 1 1/2″, 1 13/16″, 2 1/8″, 2 3/4″, 3 1/2″, 3 3/4″, 4 1/2″, 5 1/2″. Plated steel with Brass Bush.

31. Stand-off Insulators and Terminal Strips For voltages up to 10K; rigid; ceramic insulated; better than 20^6 megohms silicone anti-tracking. No solder or adhesives. Extensively used by British Forces and Communication Industry.

Lamps Inc. proudly presents

The listing is incomplete because we are the world's largest manufacturer of subminiature and microminiature lamps. And it would not be practical to show them all here. Instead, we have provided specifying data for 70 of the most popular. Hundreds of other LAMPS are described in our catalog.

We'll be happy to send you a copy. And you'll be happy to receive it.

You see, the catalog includes complete specifying guides and drawings, plus: a large, full-color interpretation of the International Commiss on Illumination (ICI) chromaticity diagram; n graph scales showing the correlation betwe voltage, current, candlepower and useful lif linear graphs of rise time, spectral distribut and spectral response characteristics; and pages of illustrated technical source, to hel you choose the exact lamp design best suit to your needs.

But, of course, even the catalog doesn't des all our LAMPS. As you read this, we are putt into production new LAMPS that were still i

ncomplete listing

ea age when this edition of EEM went to ress Some are logical state-of-the-art improve- ent, others are special designs to meet new ustomer requirements:

ere re just a few examples, introduced in 1969:

e fit #253 subminiature lamps that project crit ally focussed lens-end beam;

ubminiature lamps with new bi-pin bases, that r ily available commercial sockets;

gh-oltage neon lamps only 0.093 inches in iam er, the smallest of their kind;

subminiature coaxial contact lamps that can be driven directly by IC's without buffer transistors.

So, if you don't see what you want, ask us for it. Chances are, it's in our catalog. And if it isn't, we're better able to fill your need than anyone else.

You see, our product listing isn't complete because our product line is.

SNAPLITE®

INDICATOR LIGHTS

NEON AND INCANDESCENT AND SPECIAL ASSEMBLIES

LEECRAFT

TINEON INDICATOR LIGHTS

Long Life, High Brightness Lamps — Press fit into 5/16" hole — For neon types rated 110-250V — Nylon housing in colors (white standard) — Speed nut furnished — Plastic lens in colors — Legends — Built-in Resistor — Insulated Leads.
All Tineons are available with Incandescent Lamp.

3600 Series (with built-in resistor) Available in 3 flange dimensions

No. 36N2311

4100 Series (with neon less resistor or incandescent)

No. 41N1315

TINEONS
45 Series (Blade Terminals)

No. 45R2111T8

46 Series (Pin Type Terminals)

No. 46N2311

WITH ALUMINUM BEZEL
All Tineons may be furnished with aluminum bezel. Please specify when ordering.

No. 36EN2111 (Hi-Hat red lens) With aluminum bezel

RECTANGULAR INDICATOR LIGHTS

Long Life High Brightness Neon Lamps — Snap into panel securely without additional hardware — Choice of lens colors — Series 3100 has chrome bezel and plastic lens — Series 47 has one-piece plastic lens and body — Complete range of voltages — UL and CSA listed.

No. 47-3T (legend to specification)
For 1 3/16" x 5/8" hole

DUAL BEZEL
No. 31-ML2
For 1 9/32" x 1 3/16" hole.

Barrier separates light into two separate message areas. Individual or simultaneous operation.

No. 31D-ORN
Dual Message Lights
For 1 9/32" x 1 3/32" hole

No. 31-2111

2900 Series

REAR - ASSEMBLY, SNAP - IN LIGHTS Neon or incandescent. All voltages. Snap in from rear, lock firmly. Simpler, swifter assembly. Eliminate threading leads as in front-of-panel lights. No additional hardware. Mtg. hole .510-.520".

No. 51-2135T
SLIDELITE™
Pilot Indicator Light, Slide-Switch Combination
Ultra-compact. Simple snap-in installation. Wide voltage range, choice of lights. May be message stamped. Lens colors: red, amber, clear, white, blue, green, others on request. Leads or terminals. 1 25/64"x 15/32"x2 1/32". Rating: 125 V. 6 Amps.

SNAPLITE INDICATOR LIGHTS

With long-life lamps, high brightness types. Built-in resistor — when neon lamps — to suit applied circuit voltage, provide req[illegible] lamp life, eliminating replacement need. Features: Snap into [illegible] in 1/2" hole with no additional hardware. Wide variety of lens [illegible] housing colors. Tab or solder terminals; or wire leads. AVAILA[illegible] WITH CHROME RINGS. To specify Chrome Rings add R aft[illegible] 2 Digits, i.e., 32-2111 becomes 32R2111.

SQUARE LENS
32R2911T 7/32" high

FLAT CYLINDRICAL LENS
32-2111 3/16" high

STOVE PIPE LENS
32-2211 13/32" high

FLUSH LENS
32-2311T 1/32" high

HI-HAT LENS
32-2511T 3/16" high

NOTE: Total height above panel equal to lens height plus 1/16" f[illegible] thickness. 5/32" flange thickness for Square Lens.

HOW TO ORDER LEECRAFT INDICATORS WITH INCANDESCENT LA[illegible]S

Incandescent lamps to meet low voltage characteristics may be [illegible]plied in place of neon lamps with all indicators illustrated on [illegible]is page. To specify incandescent in place of neon lamps insert [illegible] code after series number. Some of more popular voltages are li[illegible]d.

CURRENT (Milliamperes)	VOLTAGE (Volts)	CODE LAMP
200	6	G1
40	6	G2
14	10	G6
80	14	G3
40	28	G5

EXAMPLE: 41N2313 [illegible]h 14 Volt 80 Mil. LAM[illegible]e-comes 41N-G3-2313. 32-2111 with 6 volt 200 [illegible] LAMP becomes 32-G1-[illegible]

Leecraft Series	Volts	Terminations
3200	110-125	Insulated wire leads
3500	210-250	Insulated wire leads
3200T	110-125	.187 tab terminals
3500T	210-250	.187 tab terminals

1/3W, 125[illegible]
1/3W, 250[illegible]

CATALOG NUMBERS • 3200 SERIES WIRE LEADS*

Lens Color	Cylindrical Lens	Flush Lens	Stove Pipe [illegible]s
Red	32-2111	32-2311	32-221[illegible]
Amber	32-2113	32-2313	32-221[illegible]
Clear	32-2117	32-2317	32-221[illegible]
White (Translucent)	32-2115	32-2315	32-221[illegible]

To specify Square Lens, use 32R291 plus 1, 3, 7 or 5 for lens c[illegible] Example: With red lens—32R2911. To specify Hi-Hat Lens, use 32[illegible] plus 1, 3, 7 or 5. Example: With clear lens—32-2517.

* To specify TAB TERMINALS in place of WIRE LEADS, add "T" [illegible] number, i.e., 32-2111 becomes 32-2111T.

WRITE FOR PRODUCT LIGHTING GUIDE. PROTOTYPE SAMPLES AVAILABLE ON REQUEST.

DIGITAL DISPLAY MODULES

- IN-PLANE, EASY-TO-READ NUMERALS
- 1" AND .6" HIGH CHARACTERS
- INPUT LEVELS COMPATIBLE WITH I.C. LOGIC
- NEON OR INCANDESCENT LAMPS
- BCD OR DECIMAL CODES

QS SERIES

QN SERIES

QZ SERIES

NQ SERIES

The NQ Series Digital Display modules employ numeric characters consisting of seven properly shaped segments which are illuminated by aged and selected high-brightness neon or incandescent lamps. The integral decoder-drivers translate 4 or 8 line BCD or 10 line decimal codes into the correct segment illumination.

The BCD decoders have a logical "one" level of 2.5v. and low signal current requirements, allowing them to be driven by I.C. or standard logic. All units are normally furnished mounted on a common panel in the exact configuration desired by the customer thus eliminating the need for bezels, brackets, filters, sockets, mounting hardware or additional assembly time. Decimal points, plus-minus signs, colons, etc. are optionally available.

Brief Specifications:

NQS . . . Available in three models; two 1" high character and one .6" high character. Employs I.C. decoder and discrete drivers for neon or incandescent lamps. Display faces, with or without lamps and decoder-drivers available. Economically priced at under $16.00 per decade in 1000 lots.

NQM . . . A miniature version available in 4 line, positive logic. 1.97" high, 2" deep and 1.06" wide, 1" high character. Sells for as little as $25. per decade in production quantities.

NQZ . . . 3" High, 4" deep, 1.25" wide, 1" high character. Available in positive or negative logic, special codes and fail-safe versions.

NQT . . . The "Two-fer" — A miniature version utilizing multiplexing techniques to achieve a two digit display driven by one decoder-driver. Priced as low as $19. per decade in production quantities, the NQTR measures 1.97" high, 2" deep and 2.250" wide.

MINIATURIZED COMPONENTS

Typical of the MILLEN line of miniature components:

No. A001 Bar knob for 1/8" shaft. 1/2" high by 3/4" long.....
No. A006 Fluted black phenolic knob with brass insert for 1/8" shaft.....
No. A007 and A008 1/4" black plastic dial knobs; inserts for 1/8" shaft.
No. A012 Right angle drive for 1/8" shafts. Single hole mounting.....
No. A014 1" bar dial for 1/8" shaft. 1/2" high. 180° or 280° dials.....
No. A015 1" fluted knob dial for 1/8" shaft. 1/2" high. 180° or 280° dials.
No. A017 1 1/8" diameter fluted black phenolic knob for 1/8" shaft.....
No. A018 and A019 Knobs. .....
No. A050 Miniature dial lock.....
No. A061 and A062 Miniature shaft locks for 1/8" shaft.....
No. A066 Miniature shaft bearing for 1/8" shaft.....
No. E201, E202, E212, and E222 Miniature binding posts and plug.
No. E302A to E306A Miniature ceramic terminal strips.....
No. J300-3.3 to J300-2500 Miniature Inductors.....
No. M001 and M006 Miniature insulated universal joint style flexible coupling for 1/8" shafts.....
No. M004 and M005 Miniature non-insulated universal joint style flexible couplings for 1/8" dia. shafts.....
No. M017 Miniature plastic insulated flexible coupling for 1/8" dia. shafts.
No. M023 and M024 Miniature high voltage insulated shaft extensions for 1/8" dia. shaft.....

"Designed for Application"® DIALS AND COMPONENTS

NO-STRING DIAL

037- No-string illuminated slide rule dial. The pointer is driven by
ble b non-elastic molded gear driven rack which rides in a multi-slot
ed a minum channel. This girder-like channel provides rigidity.
tion 1. Scale length 6½ inches. Supplied with bezel.

FRONT OF PANEL DIALS

act r chanical design. Easy to mount. Self-contained mechanisms,
limiting back of panel interference. Flat black art metal.
035- Illuminated panel dial has 12 to 1 ratio; size 8-3/16" x 6-17/32".
ion mounting and marking auxiliary controls such as switches,
ome s, etc. provided.
039- Small panel dial has 8 to 1 ratio; size 4" x 3-9/32".
039-1- Small panel dial with positive loaded gear drive. 20 to 1
size x 3-9/32". For ten turn devices.
039-1- Small panel dial with positive loaded gear drive. 10 to 1
size x 3-9/32". For five turn devices.

COUNTER DIALS

030- Extremely sturdy instrument type indication. Control shaft has
rat Veeder type counter is direct reading in 99 revolutions.
030-1- Same as No. 10030 except that the crank handle on the
030 1 been replaced by a fluted knob.

KNOBS

- Flu black phenolic knob with brass insert for ⅛" shaft.
- 2¾ black phenolic knob with brass insert for ¼" shaft.
- ¾" black phenolic knob with brass insert for ¼" shaft.
A - fluted knob with nickel plated brass pointer.

BEZELS FOR CATHODE RAY TUBES

671- Bakelite bezel for 1 in. tube such as 1CP1. 2⅜" x 2⅜".
072- Phenolic bezel for 2 in. tube such as 2BP1. 2⅝" x 2⅝".
073- Phenolic bezel for 3 in. tube such as 3RP1. 3⅝" x 3⅝".
075- Phenolic bezel for 5 in. tube such as 5UP1. 6⅛" x 6⅛".
073-1- Bezel for rectangular tube such as 3XP1. 2½" x 3¼".

HIGH VOLTAGE R-F SWITCH

No. 51001 — High voltage r-f switch designed for high frequency requirements. The No. 51001 features high voltage breakdown, and a non-arc tracking and arc resistant molded frame. Both collector and switched contacts break contact. Heavy duty silver contacts, and insulated mount.

DRIVES

RIGHT ANGLE DRIVES

No. A012 — Miniature right angle drive for ⅛" shafts. 1 to 1 ratio.
No. 10012 — Standard size right angle drive for ¼" shafts. 1 to 1 ratio.
No. 10012-T — Thru-sleeve right angle drive for ¼" shafts. 1 to 1 ratio.

WORM DRIVE UNITS

Cast aluminum frame may be panel or base mounted. Spring loaded split gears to minimize back lash.

No. 10000-A — 16 to 1 ratio.
No. 10000-B — 48 to 1 ratio.
No. 10000-C — 12 to 1 ratio.
No. 10000-D — 36 to 1 ratio.

GEAR DRIVE

No. 10000-12 — Spring loaded split gears to minimize back lash. 2 to 1.

FRICTION DRIVE

No. 10065 — Friction drive for 0.025" to 0.032" thick disc dials.

SHAFT LOCKS

No. 10060 — Shaft lock for ¼" shaft. ⅜"-32 bushing with 7/16" hex nut.
No. 10061 — Lock for conversion of "plain" ¼" shaft to "locking type."
No. 10062 — Thumb screw shaft lock for ¼" shaft. ⅜"-32 bushing.
No. 10063 — Lever operated shaft lock for ¼" shaft. ⅜"-32 bushing.

DIAL LOCKS

No. A050 — Miniature dial lock. Compact, easy to mount, positive in action.
No. 10050 — Rotation of knob A depresses finger B locking dial against C.
No. 10050-A — Lock with index mounting to prevent rotation of assembly.
No. 10053 — Sub panel dial lock. Nickel plated brass.

Pinlite® / MINIATURE READOUT DEVICES AND ENCODE

Pinlite® multi-filament lamps can be made in virtually any shape, making possible a very extensive range of applications. Acceptance for these lamps in various forms has rocketed forward since their development. Specific applications of these microminiature assemblies created the birth of the Midgi-Lite® and Alpha-Lite. Also, a line of driv encoders known as Midgi-Coder, compatible with Mid is now available. Models compatible with other multi-filament lamps are being developed.

Actual Size

ALPHA-LITE

ALPHANUMERIC READOUT DISPLAYS

World's Smallest & Brightest Alphanumeric Readouts

DESCRIPTION

The 16 segment Alpha-Lite was designed to provide readout capability for the 26 alphabetic characters and ten digits. Actually, thousands of segment combinations are possible. They can be used to display lower register letters, punctuation marks, Greek letters, math symbols, navigation symbols, etc.

All 16 segments are mounted on the same plane, providing a wide viewing angle.

NOTE: Decoder/driver package available for above late 1970.

Actual Size

MIDGI-LITE

DIGITAL READOUT DISPLAYS

World's Smallest Brightest Digital Readouts

DESCRIPTION

Midgi-Lites are seven segment, sub-miniature digital readouts. Each segment is a directly viewed incandescent filament that gives the most millilumens per watt of all the readout types.

"Power Efficiency" is combined with "Light Power" to create a digit that radiates with a surface brightness as high as 12,000 foot lamberts. Even the lowest rated Midgi-Li minimum brightness of 4,000 foot lam the design voltage.

This superior brightness capability tungsten filament reduces the need for ambient lighting and even allows th Lite to be viewed in direct sunlight.

A viewing angle of 120 degrees is rea mounting the filaments on the same p by minimizing the distance between ament and glass lens.

Character sizes are available from 3/16

NOTE: Matching plug-in decoder/driv able for above.

DESIGN FEATURES

- Voltage levels are compatible with circuitry (5 volts)
- 100,000 hours design life per segme
- Requires less than 1/5 sq. inch pan
- Greatest volumetric efficiency of an alphanumeric display
- Low weight and mass — less than
- Clearly readable in 10,000 ft. L. ambi environment
- All Alpha-Lites conform to performan of MIL-E-5400 CLASS II
- Brightness and color temperatures voltage controllable
- Plug-in module replaceable from fr
- Brightest readout manufactured
- 60° angle off center viewing
- All models conform to MIL-E-5400
- Highest volumetric efficiency availab
- Typical size of 5/16" character is .302 .465 high x 3/16" deep

MAXI-LITE™ Large Commercial Readouts DIGITAL AND ALPHANUMERIC

DESCRIPTION

A new series of low cost, large character size readouts, available in both alphanumeric and digital models. The Maxi-Lite incorporates many of the design concepts originating in the Midgi-Lite series. Directly viewed tungsten filaments allow unparalleled brightness and efficient use of power. The 3/4" character size is clearly read up to 60 feet. A total package thinness of only 1/2 inch, including connector, gives the designer additional cubic inches behind the panel.

NOTE: Decoder/Driver available for Maxi-Lite as integral part of connector.

DESIGN FEATURES

- Lowest initial and installed cost
- Design life of 100,000 hours
- Wide angle viewing greater than 120°
- Connectors available with pins or color coded wire pigtails
- Alpha display has 16 segments for undistorted character format
- Operates directly from I.C. level voltages (5 volts)
- Plug-in module replaceable from front

MIDGI-CODER™ Solid State Decoders/Drivers

DECODERS

NOTE: Decoder-Drivers are available for the entire line of readouts in various package sizes.

DESCRIPTION

The Midgi-Coder Decoder/Driver accepts 8421 BCD, convert seven segment Midgi-Lite code and drives the Midgi-Lite nu readout. It is designed for 5 volt systems and is available models.

DESIGN FEATURES

- Blanking input
- Lamp test input
- Brightness control
- Automatic zero blanking (AZB)
- Low cost
- Low weight
- Can be driven by integra circuits directly. (5 volts)
- Uses monolithic RTL/DT
- Accepts 8421 BCD

Pinlites Inc. A REFAC CO 1275 BLOOMFIELD AVE., FAIRFIELD, N. J. 07006 (201) 226-7724

Pinlite® / WORLD'S SMALLEST INCANDESCENT LAMPS AND MICROMINIATURE ASSEMBLIES

CTUAL SIZE
ENS STYLE
AXI LEADED STYLE
AT-TOP STYLE

The microminiature Pinlite® lamp is made possible through a unique manufacturing method developed by Pinlites Inc. Although the smallest standard size lamp is only .016" in diameter, smaller sizes are produced on special order. Pinlites Inc., with its vast experience and technical know-how in the production and design of microminiature components, also offers an additional service . . . the designing of micromodules and microminiature assemblies to meet specific customer requirements. Pinlites comply with Mil Spec 5422-E and can withstand shock and vibration in excess of 50 G's.

Pilites when speed of response, small size, and low power are important!

PINITE® FEATURES

- Low t Power Consumption
- Low t Series "L" & Shunt "C"
- IR d UV Emission
- Sm est Size
- Fas st Response (Audio Range)
- Vib tion & Shock Resistant
- Bui in Lens Concentrates Light Bea Up to 10X Normal Intensity
- Thr Styles for Greater Versatility; len axial leaded, flat-top

PINLITE® APPLICATIONS

- Transistor Indicators
- Microwave Noise Sources
- Modulated Light Source
- Microwave Bolometers
- Optical Point Sources
- Medical & Industrial Light Probes
- Remote Electronic Attenuators
- Read Out Devices
- Pointer & Meter Scale Illuminators
- Photometric Instrumentation
- Light Actuated Switches
- Telemetry
- Indicator Lamps (colored Pinlites)

FLAT TOP

All specifications for the flat-top lamps are the same as lens style lamps. When ordering, simply prefix numbers at left in "TYPE" column with "F" in place of "L" (e.g.—L12-3 becomes F12-3).

DUAL FILAMENT

Same rigid characteristics apply as with other Pinlites plus the redundant feature for fail-safe operation. Write or call for details.

STACK-LITES—MODELS 75 AND 100

Stack-Lites are an economical micro-miniature lamp matrix, designed to accept any of 10 different Pinlite® lamps in the lens and flat top styles. Both models are available as a production unit with 5-16 lamp positions. The matching connector allows a multiple stacking of the lamp heads for densities of 168 separately controlled lamps per square inch (Model 75).

DESIGN FEATURES

- Lamp selection offers light outputs from 2 to 220 millilumens
- Lamp pitches meet many punched tape requirements
- One common lead per connector allows each lamp to be individually controlled
- All lamp models are driven by 1.5 volts or less
- Color coded wire leads are available
- Flat top style lamps are assembled for a flush surface — Lens will project slightly above surface

SoLiCo PILOT & INDICATOR LIGHTS

- Complete range of voltages.
- Neon and incandescent lamps.
- Lenses in transparent and translucent colors.
- Lenses can be imprinted as desired.
- Decorative chrome plated bezels (other finishes upon request).
- Rectangular and round lights snap into panel.
- Round type lights can be supplied with speed-nut fasteners.
- Variety of terminals.
- Recognized under the component program of Underwriters Laboratories, Inc., and CSA approved.

SORENSON LIGHTED CONTROLS, INC.

530 Oakwood Avenue, West Hartford, Conn. 06110. Telephone: (203) 236-3267 TWX 710-425-0034

Shelly REAR PROJECTION READOUTS...

VERSATILE 12-MESSAGE READOUTS QUALIFIED TO MIL-R-3902

(READOUTS: INCANDESCEN

LETTERS, NUMERALS, SYMBOLS OR SIX-LINE MESSAGES TO IMAGE SIZE OF 0.700" HIGH. REMOVABLE FROM PANEL FRONT WITHOUT

Shelly projection-type readouts are precision, completely modular consisting of 12 parallel, miniature optical projectors which display ferent filmed messages on a single-plane viewing screen. Any combin characters or words can be projected from custom designed photo film reticles. To create compound messages, up to six lamps may be er simultaneously. Modular construction permits rapid "in field" ch lamps, color filters or film message reticles. To solve high density pa problems, Shelly Readouts can include built-in solid-state lamp drivers to visual decoders, or binary to visual decoders with memory. The si of the Shelly Readout assures high reliability in environmental e They meet all applicable requirements of MIL-R-39027.

EASY LAMP REPLACEMENT WITHOUT T

MIX OR MATCH COMMON FEATURES

Front removable, plug-in modules * Electronic versions all Integrated Circuit (IC) * Image height 0.700" * 12 numeral, word or symbol messages * Lamp or reticle changes without tools * Intermix message colors * Vertical, horizontal or matrix mounting * Natural or blue Polacoat screens

DECIMAL INPUT TO VISUAL DISPLAY — MODELS SRO-600 & SRO-600E

Advanced viewing screen and projector system design affords greater viewing area than conventional readouts . . . 10% larg and 30% smaller housing. Both standard length SRO-600 and extra length SRO-600E, for use with electronic readouts, accep input and provide 12 different visual displays . . . letters, numerals, symbols, characters or up to six line messages with contrast. Standard based or unbased lamps are available from most sources, minimizing special stocking or procuring of available from 3 to 28 volts. RFI and weather-proof bezels, as well as finishing types, available from stock. Printed circuit mates with connector in housing for greater shock and vibration resistance than conventional types. Optional type avai "solder-on" terminals. Terminal arrangements: 24 common terminals or 12 lamp terminals and common or split common steel individual housings are welded together providing wide mounting versatility and excellent rigidity. Aluminum housings for applications where light weight is essential. Special tabs fabricated to customer requirements, as are spacing groups for cl for message meanings. Lamp and film reticle replacement is easily accomplished without tools. Individual message colors

BINARY INPUT TO VISUAL DECIMAL DISPLAY — ALL IC — SERIES BDR-100

Converts 8-4-2-1 binary input signals to visual decimal displays. All IC hex-inverter flat paks enable packaging entire module into plug-in 1.12"H x 0.745"W x 5.17" long . . . only 1.67" longer than standard SRO-600 readout! Front panel removal fea fast, easy access to electronic circuitry, as well as lamps and reticles. Configurations accept and decode any one of the fol binary signals to visual decimal display; 10 binary signals to visual decimal display, plus two additional direct wired di binary signals to visual decimal display. Logic levels 0 to 0.8 volts "0" and greater than +2 volts for "1." BDR-100 uses 6 type T-1 lamps; BDR-100 accepts 10, 12, 18 or 28 volt T-1 based lamps. High performance and high reliability assured thr circuitry which incorporates all necessary drivers, gates and complementary function generators to decode 8-4-2-1 code decimal display. T^2L input logic compatible with DTL logic. Tolerance to wide temperature range . . . free air operation 0°C storage range −55°C to +85°C. Fully enclosed modular readouts provide excellent protection for lamps and electronic cir and easy access to module simplifies field inspection or lamp maintenance . . . without tools. Individual or multiple mess

BINARY INPUT TO VISUAL DECIMAL DISPLAY WITH MEMORY — ALL IC — SERIES MBR-100

Binary input to decimal display with memory for readout of binary input data normally too fast for high accuracy. Un SRO-600 type precision 12 message readout projection system and lamp assembly module . . . also retains fast front remov The all IC binary to decimal converter and compatible memory, contain all the drivers, gates and complementary function required to decode and store 10-digit or 12-digit binary input information. Unit accepts four line parallel binary coded dec mation and displays decimal messages upon application of an external +3 volt enable pulse of 2 μsec or more; this is coupling which responds to the whole pulse rather than the leading or trailing edge. Display will be held indefinitely, or un enable pulse is applied. Display versatility increased through application of a constant 3 volt signal level which causes t to follow the input, similar to the BDR-100. Designed for use with 6 volt positive logic source, the "0" logic level requires volts; "1" logic level greater than +2 volts. Floating commons permit using the decoder with negative logic. Configurati and decode any one of the following: 10 binary signals; 10 binary signals plus two additional direct wired displays; 12 bin

DRIVER AUGMENTED READOUT — SERIES DAR-100

Decimal inputs as low as 0.3 mA will produce crisp images up to 0.700" high with excellent contrast, when driven by 12 sili epitaxial transistor lamp drivers. The readout is comprised of a precision 12 message readout of the SRO-600 type, plus lamp drivers for each optical system projector lamp. The DAR-100 is available in both standard 1.12"H x 0.745"W x 3.5" lon as well as the 5.17" long model, compatible with the electronic readouts contained in this "Mix or Match" group. The r project numerals, symbols or up to six line words . . . singly or in combination since each lamp is individually controlled. display may be colored, or individual messages may be colored through use of color chips in the projection system. Lar miniature long-life T-1 type are used, with ratings of 5 to 28 volts . . . based or unbased for simplified stocking or proc readout incorporates a highly shock and vibration resistant printed circuit connector which is keyed for easy front panel or removal, as are the other plug-in modules in this grouping. Other similarities include high impact resistant housing an of blue or white Polacoat screens . . . blue raises the white color display temperature approximately 800°K.

ECONOMY DECIMAL INPUT TO VISUAL DISPLAY — MODEL SRO-300

Economy rear projection readouts display images up to 0.700" high. Up to 12 readouts may be arranged in a single employing a common viewing screen. This technique offers substantial cost savings over more costly individual modula and plug-in terminal/connector blocks. Readouts display 12 numerals, words or symbols . . . singly or in combination . . . white or in color. From one to twelve modules and common viewing screen are supplied completely assembled and ready tion and operation. The common mounting bracket requires only four screws to secure the entire assembly into position, thus and speeding installation. Fast direct wiring to equipment harness is accomplished with well separated, plainly marked and integral terminals mounted on the rear of each module. Removal of two screws permits access to readout for quick lamp ma as well as field inspection, changing of message reticles or film chips in each projector system. Long-life T-1 type miniat either standard based or unbased are used, thus minimizing special stocking or procuring of lamps; lamp voltages from 3 may be used in the SRO-300. A special bracket permits focusing two readouts on a single image area, for 24 message ca

12 MESSAGE REAR PROJECTION READOUT/SWITCH — MODEL ROS-600

This decimal input to visual display readout/switch consists of 12 parallel miniature optical projectors, similar to the SRO six optical systems can be energized simultaneously to produce complex messages. Any message that can be put on fi projected to an image height of 0.700" . . . black and white or in color . . . singly or in combination. This unit combines the of the rear projection readout with a pushbutton switch assembly. Units can be fitted with 2DPT or 4PDT momentary o action switch assemblies for full pushbutton switch operation. The switch assembly is actuated by pressing the face of t Switches are available with silver or gold contacts, with resistive ratings of 125 or 250 vac at 5 amps. and 30 vdc at 1 amp. r Total weight is less than 5 ounces, with measurements of 1"W x 1.25"H x 5.25" long, completely assembled. Modular des unit permits grouping in intimate contact in any horizontal or vertical arrangement, as well as matrix configurations co any number of units. Housings are welded together for maximum strength. Mounting brackets may be provided at any positi The versatile readout/switch module uses long-life, miniature T-1 lamps, in either based or unbased types, offering simplifie

ULTRA-MINIATURE DECIMAL INPUT TO 12 MESSAGE VISUAL DISPLAY — MODEL SRO-90

The smallest and most versatile 12 message rear projection readout ever developed. It displays intricate messages and diagrams no other rear projection miniature readout can produce . . . a design dictated by quality, rather than cost. The precision optical system will project anything that can be put on film . . . image size up to 0.450"H . . . 12 numeral, symbol or up to four line messages with excellent focus and corner-to-corner contrast . . . 20% more image area in 20% less space than any other readout available. Smaller than a roll of pennies, this readout offers all the features available in the larger readouts in a 0.650"H x 0.460"W x 2.68" long plug-in module . . . the smallest size possible, compatible with standard T-1/MS 24367; standard lamps minimize problems normally associated with stocking or procuring of special lamps. Field maintenance may be performed from the front panel, without tools. Lamp voltages from 3 to 28 volts. Individual or common grounding for greater message control or complex signalling. Total weight, including housing, only 1½ ounce. Options are drip-proof, RFI and conventional bezels. Modular construction permits mounting vertically, horizontally, or in matrix configurations; housings are welded together for maximum strength. Gold pin terminals mate with terminal blocks held captive in each housing. Message or background colors available. Extra length version compatible with electronic readouts.

ULTRA-MINIATURE BINARY INPUT TO 12 MESSAGE VISUAL DISPLAY — ALL IC — MODEL BDR-90

This plug-in module employs IC's, containing all drivers, gates and complementary function generators required to convert 8-4-2-1 codes, from 10-digit binary inputs, to visual decimal displays. The 12 message readout provides two supplemental wired positions, which may be turned on as needed for simultaneous display of background colors, + or −, left or right decimal, or other symbol, word or numeral messages . . . anything that can be put on film. Combined with the smallest precision optical system ever developed, this front removable module provides images up to 0.450" high. As the smallest completely self-contained readout and binary converter, the BDR-90 opens a new era in high density packaging. Over-all size is 0.450"W x 0.650"H x 5.500" long, from the front of the module to the end of the housing terminals. Modular design permits vertical, horizontal or matrix mounting, with either vertical or horizontal messages. Flat pak IC's use T²L input logic, which is compatible with DTL logic. Logic "0" input, 0 to +0.5 volts; logic "1" input, greater than +2 volts. High reliability, high performance IC's permit operation over a wide temperature range . . . 0°C to +70°C; storage range −55°C to +85°C. Long-life, standard T-1 lamps (MS 24367) are used for simplified stocking and procurement. Fully enclosed housing assures protection for electronic circuitry and projector systems.

12 MESSAGE REAR PROJECTION READOUT/SWITCH — MODEL ROS-90

The ROS-90 combines the advantages of a standard SRO-90 rear projection readout with a switch. The standard 12 message readout is simply plugged into movable 2PDT switches for momentary or alternate operation. The switches are operated by pressing the screen of the readout. The switch can be programmed with related equipment for 1 to 12 count readout or to perform similar functions. The complete assembly is packaged in a stainless steel housing that is equipped with a wide variety of mounting tabs for quick and easy mounting. Switch assemblies may be mounted vertically, horizontally or in matrix configurations. The complete assembly measures 0.510"W x 0.710"H x 3.750" long, with total weight of less than 2 ounces each. ROS-90 assemblies are supplied with a 12 inch harness for easy wiring.

NEW HOUSING GUIDES LAMP LEADS TO CONTACTS

Funnel-shaped passages guide lamp leads to electrical contacts . . . speeds installation . . . no chance for misalignment or bent leads!

"BRITE-EYE" ACTUAL SIZE

OPTIONAL CAP STYLES

Specify ball, lens or square caps from 30 combinations of color and type...or Digi-caps, square caps in 10 color/type combinations embossed to order with high contrast letters, numerals or symbols. Ideal for decimal or binary count.

Standard "Brite-Eye"

"Brite-Eye" with High Temperature, Epoxy Heat Barrier

"BRITE-EYE" MICROMINIATURE INDICATOR LAMPS — Panel Mount

Smallest front relampable indicator light available.

The panel mounted "Brite-Eye" P series is specifically designed for installations that require excellent visual indications, combined with high density packaging, to monitor important operating functions. Lightweight, of less than ½ gram each, including lamp, makes the "Brite-Eye" ideal in applications where weight is a critical factor. The unique lamp and housing combination offers many advantages not available in any other microminiature indicator light . . . funnel-shaped passage guides permit use of axial lead lamps . . . axial lamps provide highest illumination intensity available in this class lamp . . . replacement lamps slip in or out without tools . . . small diameter housing body permits mounting indicators on 0.225" centers . . . indicator housings snap into position and lock without additional hardware . . . lens caps snap off or on for easy access to lamps from the front panel . . . indicators available with a choice of 14 lamp ratings from 1.5 to 28 volts and life expectancies from 10,000 to 60,000 hours. Easy access solder terminals are provided on the rear of each housing for simplified and fast installations. Terminals are gold plated for corrosion resistance and sure flow of solder. Special "Brite-Eye" configurations are now available with high temperature, epoxy heat barrier which prevents transmission of soldering iron or solder gun heat into the body of the housing, thereby making the housing virtually impervious to damage that could occur from heat.

Standard "Trans-Eye"

Special "Trans-Eye" "Configurations

"TRANS-EYE" MICROMINIATURE TRANSISTORIZED INDICATOR LAMPS

High intensity indications from signal levels too low to illuminate conventional indicators.

The "Trans-Eye" indicator is designed for compatible "Mix or Match," with panel mounted "Brite-Eye" indicators . . . units are physically identical, except the "Trans-Eye" is ⅛ to ¼" longer. Electrically, the "Trans-Eye" incorporates a transistor in the housing which will "turn-on" the indicator when a signal as low as 0.3 mA is applied. This capability is ideal for bright front panel indications when extremely low signal levels are being used. Long operating life and dependable indications are assured through the use of silicon NPN or PNP planar transistors . . . the "Trans-Eye" also has a high temperature characteristic which makes the unit reliable in a wide range of environmental applications. Configurations are also available incorporating a built-in resistor. Lamps are available in ratings from 5 to 28 volts with life expectancies from 10,000 to 60,000 hours.

SPECIALIZED "TRANS-EYE" CONFIGURATIONS

Specialized physical and electrical configurations have been developed to meet a wide range of customer specifications. Shelly's staff will be happy to consult or quote on "Trans-Eye" indicators for any specialized application. Consult the factory or your nearest field engineering representative.

"Brite-Eye"

"BRITE-EYE" MICROMINIATURE INDICATOR LAMPS — Circuit Board Mount

The "Brite-Eye" C series is designed for use with printed circuit boards, where it is important that the state or condition of the board, or operation, be monitored rapidly. The high intensity illumination and microminiature size of the C series make it an ideal indicator for use in multiple rows, or bays of cards, as well as any other application where space is limited beyond the mounting surface. The C series "Brite-Eye" incorporates standard "Brite-Eye" features . . . it may also use any of the optional cap styles.

"GLO-EYE" MICROMINIATURE NEON INDICATORS

The Glo-Eye microminiature neon indicator series provides bright indications in the presence of 115VAC power. The indicator consists of an "easy-lamp" housing, a wire terminal neon lamp type USASI A1K, and a snap-on cap in 12 type/style/colors. The housing also contains an integral resistor for varying life expectancies. The Glo-Eye housing fits a 0.191" hole for compatibility with the Brite-Eye and Trans-Eye. Over-all flange dimension of 0.225" permits mounting the units on 0.225" centers for high density packaging applications.

SIGNALITE

MINIATURE GLOW LAMPS

Whether you use Glow Lamps as Indicators or as Electronic Circuit Components . . . the combination of features, offered by Signalite Glow Lamps make them suitable for a wide variety of applications. Signalite Glow Lamps have solved problems in these areas: voltage regulation and references, photo drivers, SCR triggering, timing, photo choppers, oscillators, counters, regulated power supplied, digital voltmeters, timing circuits, suppressed 0 voltmeters, frequency and voltage dividers, indicating voltmeters, gating, transient and overvoltage protection, flip-flops, etc. Signalite's extensive line can provide you the design flexibility needed to achieve circuit reliability at low cost. For a creative approach to your design problem contact Signalite's Application Engineering Department.

If there is a Gas Discharge Device or Glow Lamp to meet your n

SIGNALITE APPLICATION NEWS
is used to communicate new and proven techniques and applications of Signalite's neon lamps and gas discharge tubes. Signalite Application News provides a forum for an exchange of ideas to keep the design engineer aware of the versatility of neon lamps and their many applications. Copies are available from your Signalite representative or by contacting Signalite.

Your Single Source for Gas Discharge Tubes and Glow Lamps

SPARK GAPS

Signalite offers a wide range of two electrode and triggered spark gaps to protect your electronic components, transmit high energies, hold off a wide range of voltages, crowbar power supplies, etc. Over 300 standard gaps to fit 400 volt to 5,000 volt applications are available.

Signalite "300" Spark Gap Brochure . . . fully details the complete Signalite line of over 300 types of two-electrode spark gaps and triggered spark gaps, includes application notes, characteristics, mounting arrangements, photographs, etc.

NOISE SOURCES AND MINIATURE NOISE GENERATORS

Signalite is the largest source in the world for your noise source and noise generator requirements. With the addition of the TUCOR (ESCO) line, Signalite now offers over 200 different types for use in noise figure test equipment and for monitoring system receiver sensitivities, from UHF to 90 GHz.

Signalite "200" Noise Source Brochure . . . provides a complete dissertation on over 200 types of microwave noise sources and miniature generators available, including fundamental noise measurement discussions, typical applications, detailed characteristics, etc.

We'll have it. If there isn't, We'll Design it!

LAMPHOLDER BODY: Black general purpose phenolic.

LENS ASSEMBLY: Anodized aluminum bezel with plastic lens. (Twist lock attachment of lens assembly to lampholder body.)

MOUNTING: Lampholder is mounted by inserting the terminals directly into printed circuit board and flow soldering. Can be mounted on ¼" centers.

GENERAL COMMENTS (Models 101, 111 and 864)

The Sloan Company "Pee Cee" replaceable lamp indicator light is designed specifically for printed circuit board mounting. This is mounted by inserting the terminals directly into the board and flow soldering directly into the circuit; two pins provide circuit contc Lamps are replaceable from the front by removing the lens. The "Pee Cee" series helps prepare the way for new packaging conce

- Permits elimination of front panel.
- Substantial contribution of soldered assemblies to production economy; can be automated.
- One central circuit board for indicator lights. (Mother Board)

TRW® REVODEX® COUNTING DIALS

ELECTRONICS GROUP

RD-1
RD-6
10 Turns

1" and 1⅞" REVODEX Dials Eliminate Reading Errors and are Available in Both Clear or Black Anodized.

RD-400 Series
10 Turns

RDK-400 Series
15 Turns

Accurate Reproducible Readings: To one part in a thousand. Settings can be estimated to fractions of a thousandth.

See exact settings quickly and clearly . . . significant digits are conveniently grouped at one spot. Reading errors are eliminated. REVODEX dials are particularly suited to IRC 3, 5, 10 and 15 turn precision potentiometers.

Locking Device: Standard on 1⅞", optional on 1" dials. Finger-tip action positively locks or unlocks the dial. Locks can be set without shifting the dial reading.

Easy Reading: Even when mounted above eye level. 1⅞" sizes give a direct reading with 3 numbers grouped for fool-proof reading. On the 1" size, an angular surface provides greater area to obtain maximum numeral size. For greatest ease of reading, numbers are rearranged to a primary and secondary scale presentation.

Full Range: 000 to 999 to indicate full ten turns. 000 to 1599 to indicate full fifteen turns.

Zero Backlash: Knobs are set-screwed directly to potentiometer shaft and the non-rotating base is tight to the panel in the RD-400 series. This feature thereby eliminates dial backlash.

Sturdy Construction: Life tested for one quarter million cycles with no signs of appreciable wear.

Easy Mounting: Mounting plate of 1⅞" dial fits under potentiometer mounting nut. Knob is secured to shaft with set screw. Body of 1" dial mounts directly on potentiometer bushing and knob attaches to shaft. No special panel holes required.

Display & Control? TEC's got it!

Systems, assemblies, components — including many we invented! TEC originated the transistorized indicator, and we're still ahead of the field. We also offer more readouts than anybody. And we're the largest independent display/control firm in the business, 100% involved in improving the man-machine interface. You'll find us a flexible, innovative single source for:

INDICATORS
Solid state, transistorized, conventional.

DISPLAY PANELS
Integrated back-lighted displays of any size.

SWITCHES
Alternate, momentary, snap, illuminated.

READOUTS
Solid state, segmented, display tube, projection.

KEYBOARDS
Electronic encoding using solid state or standard switches.

CRT DISPLAY TERMINALS
Stand-alone and multi-station.

PROGRAMMABLE PROCESSORS
For communication, data transmission, data concentration and peripheral pre-processing.

TUNG-SOL® MOLDED BASE LAMPS AND BASELESS CARTRIDGE LAMPS

BASELESS CARTRIDGE LAMPS

ELECTRICAL CHARACTERISTICS

Lamp Type	Design Volts	Design Amps	Design C.P.	Life Hours
561	12.8	.97	12	600 @ 12.8V
562	13.5	.74	6	2000 @ 14V
563	13.5	.52	4	1000 @ 14V
564	14.0	.44	2	5000 @ 14V
565	28.0	.38	4.5	5000 @ 28V

These lamps may be mounted on a variety of simplified terminals. AMP Inc., Harrisburg, Pa., makes several types.

Plug-in module activates photo-electric sensor in high speed check sorter.

Molded base permits bending lead wires at acute angles.

Soft plastic e lation permits mounting in metal panels.

The molded base lamp provides important adva that simplify production and contribute added reli to the end product. The molded base is perma bonded to the bulb. It replaces the previously cem on metal base. The former receptacle that had to be into the circuit is completely eliminated. The molde lamp is self-mounting. In fact, the Tu-Pin lamp can plied with automated equipment.

The molded base technique makes it possible to p a wide variety of lamp packages—built-in key ways, in types, unusual positioning of the leads and purpose configurations.

Strip-mounted, grain-size, 21-mil lamps sna molded plastic holder to form a condition for computer circuit boards. Lamp sockets are bered to correspond to individual circuits. Spa test probe contacts is provided. Units can be ated in either normally "on" or "off" conditi can be wired to a door switch or test push

TUNG-SOL® DIGITAL AND ALPHANUMERIC DISPLAYS

VACUUM TYPES

DIGIVAC S/G™ VACUUM FLUORESCENT DISPLA

DT1704B Numerals 0 to 9 and 14 letters | DT1705D with decimal point | DT1707B plus/minus one, decimal | DT1719A plus/minus

This Tung-Sol development, which created a whole new set of digital display standards, is now made in a narrower configuration that reduces the space required for array applications. Low voltage, low power drain (25 V and 1.6 V) is ideal for low signal level requirements, especially battery-operated equipment. Digivac S/G displays meet MIL specs. They employ standard miniature tube bases and have inexpensive logic/driver requirements. Display is single plane it space-age-type segmented characters. Solderable-lea op tion provides for circuit board mounting. Common en provide unlimited color selection for identification, t heighten contrast. Illustrated types are standard. Other m bols on special order.

INCANDESCENT TYPES

7 Segments, 16 Segments, Stacked, Integrated, Status Indicat

Designed to provide optimum contrast under ambient light conditions. Light shades are not needed. Tung-Sol displays function in extreme environmental conditions. The 20 mA and 10 mA lamp banks are mechanically interchangeable.

7 Segments—Display 0 through 9.

16 Segments—Full alphanumeric display.

Stacked—Digits as well as lamp blocks individually replaceable for each digit.

Integrated—Monolithic construction requires less width per character. Individual lamp blocks replaceable.

Status Indicators—Fixed messages, or symbols, to specification. Supplied readable when off, or completely blank.

FILTERS

CUSTOM-BUILT L-C FILTERS

200 CYCLES TO 50 MEGACYCLES FAST PROTOTYPES

TYPES: LOW PASS, HIGH PASS, BAND PASS, BAND STOP.

FREQUENCY RANGE: 200 Cycles to 50 Megacycles.

IMPEDANCE RANGE: 50 ohms to 100 K ohms.

CONSTRUCTION: Epoxy encapsulated or hermetically sealed in steel cans.

SIZE: From .625 x .625 x .450 depending on electrical specifications.

DELIVERY: Prototypes can often be delivered in 1 week.

RISE TIME CONTROL — MODEL 50-1

The model 50-1 was designed for precise adjustment of the rise and fall time of pulse generators. This unit slows the pulse by a controlled amount by means of Gaussian filters. Any of 110 different filters can be selected by the use of two decade switches. Rise times are controlled in 10 nanosecond steps from 0 to 1.1 microseconds. The 50 ohm input allows for direct impedance match to the output of most pulse generators.

SPECIFICATIONS:
Impedance: 50 ohm.
Filter Type: Gaussian (passive).
Overshoot: 5%.
Maximum Rise (and Fall) Time: 1.1 microseconds
Steps: .01 microseconds.
Accuracy of Rise Time Reading: 10%.
Size: 7″ x 8″ x 8″.

FILTER SYNTHESIZER — MODEL 10K-1M

Design a filter in a minute.
Check it in your circuit in another minute.
Install the components on your breadboard.

The filter synthesizer is composed of all passive elements. As you use it, you always know the circuit that is in use, and the values that are being used.

Design the filter with the nomographs supplied. No knowledge of filter design theory is required. Choose any impedance between 100 and 1000 ohms. (Higher and lower impedances not on the nomographs can be calculated from formulas supplied.) Choose any frequency between 10 kc and 1 megacycle. (For other frequencies use the formulas.)

Choose one of the different types of elliptical high pass filters. Set the values from the nomographs in decade capacitors and inductors and check the fil your circuit. If it is satisfactory, install the capacito inductors in your breadboard and the filter is fi

Frequency Range: 10 kc to 1 megacycle (Higher and with a restriction on impedance).
Impedance Range: 100 to 1000 ohms (Higher and with a restriction on frequency).
Type: High pass or low pass elliptical function filters to 40 db attenuation.
Construction: All networks passive and controll decades.

RADIO INTERFERENC

FILTERS

STANDARDIZED FILTERS

Standardized filters are low pass filters. Rectangular and some tubular filters are pi types while the lower insertion loss tubulars are L types. They are supplied with two terminals to be connected in series with a power line. This places an inductor in series with the line and a capacitor is internally connected from terminal to the case. The filter case must be grounded for proper operation. The internal inductors and capacitors are especially designed for radio frequency filter operation to provide good filtering action over a wide frequency range.

CURRENT RATINGS

Filters are rated for continuous use at a maximum ambient temperature of 85°C (185°F). They are made to withstand occasional momentary surges for normal motor starting, etc. If you have an intermittent duty problem contact factory for a suitable rating.

VOLTAGE RATINGS

The filters are rated for continuous use at the specified voltage at temperatures up to 85°C (185°F). Filters with a dual voltage rating (e.g. 400 VDC/150 VAC) are rated for the higher voltage only in direct current applications. The rating drops to the lower value for alternating current applications. Any filter may be used at a lower voltage than its rating.

CASE SIZES

All rectangular filters are in deep drawn seamless cases. They are hermetically sealed with solder sealed covers. Dimensions shown for cases are basic sizes, but because of their deep drawn nature, dimensions will vary slightly depending upon the point of measurement.

Cases and brackets are steel, hot tin dipped finish.

TERMINALS

Standard terminal types are shown. If two different terminals are desired on one filter, insert both terminal types in the part number — for example 70D6.3GW1121. For mounting styles L, M, S, V, Y the first terminal type listed in the part number will be supplied on the end near the mounting studs or flange.

INSERTION LOSS

The column marked *db* in the table of basic part numbers is the insertion loss at a frequency of 150 kilohertz. Insertion loss is a measure of the effectiveness of a filter at a particular frequency. The insertion loss is the logarithmically adjusted ratio of signal input to signal output measured in a standard circuit of 50 ohms input and output impedance. The larger the number of *db*, the greater is the signal reducing ability of the filter.

The following table will help to illustrate the ratio between the interference voltage input to a filter and the output voltage as stated in *db*.

db	*Voltage Input : Voltage Output*
0	1:1
6	2:1
20	10:1
40	100:1
60	1,000:1
80	10,000:1
100	100,000:1

All the *db* figures in the chart represent the insertion loss for each filter at 150 kilohertz. A complete description of insertion loss requires a graph or a tabular chart showing a number of *db* readings at frequencies spread throughout the useful range of the filter. The filters in this catalog have a useful range from below 150 kilohertz to above 250 megahertz. They have been designed to maintain approximately the stated level of insertion loss in the frequency range of 150 kilohertz to about 10 megahertz and then to follow a gently sloping reduction maintaining effective levels of insertion loss to between 250 and 400 megahertz. This corresponds to the normal frequency distribution of radio interference generated by most electrical machinery, electromechanical devices and a great deal of electronic equipment.

The tubular filters are designed for more severe requirements and will maintain the stated level of insertion loss from 150 kilohertz to greater than 10 Gigahertz.

VOLTAGE DROP

All filters are designed to have a voltage drop of low value so that they will not interfere with proper operation at the equipment in which they are installed. The 70 volts D. C. series has a maximum drop of 0.3 volt when operated at full rated current. The 400 VDC/150 VAC and the 600 VDC/250 VAC have a drop of less than one percent of the AC rating when carrying full rated current.

WHY USE FILTERS?

Much electronic and electrical equipment produces interference disrupts radio communication and seriously affects the safety and operation of aircraft, marine, industrial and military communi As a result, the Federal Communications Commission is enforcing which require control of interference and interference sources. The military branches of the Department of Defense are specifying inte free operation in much of the equipment they now purchase. Manuf of sensitive and complex electronic equipment find that often their do not function properly as a result of interference produced in their own or nearby systems.

The answer to this is radio frequency interference control. This can be accomplished by one or more of the following methods.

1. Redesign to use non-interfering type components instead o which generate interference. Example—Replace commutat universal cooling blower motor with interference free i motor.
2. Provide effective shielding to prevent direct radiation. Ex Interference producing ignition system of a internal com engine shielded with complete metallic housings over spark cables and magneto.
3. Install radio interference filters in power lines to prevent i ence signals from being conducted to distant areas on those lines. Example—Filters installed in power lines to a direct aircraft motor to prevent motor interference from being co to the radio installation.

Interference reduction and control is generally a judicious balance these three methods. Usually no one method is completely effectiv the equipment design is finalized, further interference reduction bec combination of shielding and filtering. They complement each other most cases neither shielding nor filtering is completely effective al

HOW TO USE FILTERS EFFECTIVELY

First one must learn to recognize the serious sources of radio fr interference. Interference is generated wherever there is a spark or e discharge. Commutator type electric motors and generators, electric fluorescent lamps, switches and relays, thyratron and other gase charge tubes may all be sources of radio interference of which the facturer or user may not be aware. Electronic equipment which oscillating circuits may generate radio frequency signals to perform sary functions. These signals become radio interference when they le confines of the circuits and equipment where they are needed an fere with other radio frequency sensitive equipment. An example o the oscillator used in a superhetrodyne receiver. Among electronic tors those dealing with critically shaped waveforms such as saw t square wave and pulse generators can cause a considerable am interference as a result of harmonics of the fundamental frequencie

For best results, isolate the severe interference producing sour prevent them from contaminating interference free equipment or line by. This can be accomplished by shielding and enclosing case cons around the interference sources combined with filters in the power

Filters will reduce the radio interference currents flowing in lines to very low levels. This is essential to prevent unwanted signa traveling great distances and radiating into space from these distant lines. Filters are not a complete cure for all radio interference pr They need the help of adequate shielding and isolation to be con effective.

The physical placement of a filter is important. Improper po can sometimes nullify the effectiveness of a filter. The radio inte filter should be mounted close to a shielded source, or consider whole chassis a source, close to the power line entrance. Input and lines of the filter should be separated. For best results use mountin L, M, S, V or Y and project one terminal through a shielding part bulkhead in the chassis or wiring enclosure. Shielded lead style t can also help isolate input and output lines. Be sure that shielded lea the outer covering grounded to chassis at both ends.

LITERATURE AVAILABLE

A five page reprint entitled *"Radio Interference Filters — Their and Use"* showing how to obtain best results when using filters fo interference reduction in electronic equipment is available on reque

ALL-TRONICS PRODUCTS

In addition to Standardized Filters, *All-Tronics, Inc.* is a supp custom designed radio interference filters to the original equipment Filters with unusual ratings, peculiar shapes, extended environme quirements and rigid specifications are available to order. If yo any applications for which our Standardized Filters do not complete your requirements, forward your specifications to us and our engi department will gladly recommend a design to solve your problem

In keeping with our comprehensive coverage of the RF filter f also manufacture screen booth filters, line stabilization networ capsulated, impregnated and hermetically sealed networks, ass and coils to specifications.

Amperex PIEZOELECTRIC Ceramic Resonators

T: Amperex Piezoelectric Ceramic Resonator is designed to be u d as a selective element especially in the i.f. amplifiers of A and FM receivers (either individually, in matched pairs or q ds) for communication and entertainment applications.

A perex Piezoelectric Ceramic Resonators qualitatively allow t creation of a "lumped selectivity" in the circuit while elimi- n ing the problems associated with conventional bandpass f ers, due to the following advantages of our advanced design c cept:

- No installation alignment
- Negligible drift over long periods of time
- High selectivity and a Q about 10 times better than that of conventional coils
- Large size reduction compared to even the smallest bandpass filters available
- Shielding not required due to the absence of magnetic fields
- Negligible temperature drift over a wide temperature range

Dimensions in mm.

PECIFICATIONS: AM . . . 450-470 kHz

sonance frequency f_r	450-470kHz
erance or resonance frequency (incl. aging in 10 years)	±1 kHz
ality factor $2\pi f_r L_s/R_s$	> 800 (typical 1000)
ductance L_s	8.5 mH ±10%
pacitance $C = C_s + C_0$	190 pF ± 10% (measured at 1 kHz)
ximum permissible a.c. voltage at resonance frequency	100 $mV_{r\text{-}s}$
sponsive curve	see figure 1
rking temperature range	—25/+85°C
mperature coefficient of f_r	<60 ppm/°C
ximum d.c. voltage	30V
ysical dimensions (max)	10 x 8 x 3 mm
rminals	tags, lock fitting, gold-plated
ch	5.08 ± 0.2 mm (0.2")
ldering condition	250°C max. soldering time 5 sec.

e distance between resonance- and anti-resonance-frequency is about 18 kHz e figure 1).

fa = 470kHz anti-reson. freq.
fr = 452kHz resonant freq.
horizontal scale 2.5kHz/div.
vertical scale 10dB/div.

PECIFICATIONS: FM . . . 10.7 MHz

sonant frequency	10.7 MHz
lerance on resonant frequency	±0.5% (±50 kHz)
ality factor	>350
ductance (L_1)	50 μH ± 20%
pacitance ($C = C_0 + C_1$) measured at 100 kHz	55pF ± 20%
aximum permissible a.c. voltage at resonant frequency	50$mV_{r.m.s.}$
aximum permissible d.c. voltage	30 V
mbient temperature range	—25 to +85°C
mperature coefficient of f_r	$<-60.10^{-6}$/deg. C
lderability	250°C max. soldering time 5 sec.

ACTIVE FILTERS from ANALOG DEVICES, INC.

FEATURES

Wide Frequency Range	.001Hz to 20KHz in Low-Pass, High-Pass, Band-Pass and Band Reject models
Multiple Transfer Functions	Butterworth (standard), Bessel, Tchebyscheff and Paynter
Computer Designs	Standard and Special frequency — amplifier combinations available
Low Drift	$\Delta f_c < 0.05\%/^\circ C$; offset drift $< 50\mu v/^\circ C$
Low Cost, Fast Delivery	$22 (100 lot), 2 weeks ARO of Standards

DESCRIPTION

Analog Devices active filters feature precision RC networks activated by operational amplifiers to closely approximate ideal transfer functions. They overcome the passive RLC filter problems of insertion loss, input-output loading and ultra-low frequency operation. Analog Devices also offers a range of *CUSTOM DESIGNS* featuring combinations of the following characteristics:

Special Responses:	1 to 8 pole transfer functions
Adjustable Gain:	To 40 dB ±0.001 dB (0.01%); external trim
Adjustable Frequency:	10 to 1 range, external trim
Input Current and Offset:	To 0.5 pA/°C; to 0.5 μV/°C
Other Features Available	To meet the needs of a given application

STANDARD UNITS

SPECIFICATIONS (typical at 25°C unless noted) TYPE ▶	BUTTERWORTH LOW PASS AND HIGH PASS		BAND PASS AND BAND REJECT
FREQUENCY CHARACTERISTICS	ultra-low range	standard range	BR 2 BP 2&4
NUMBER OF POLES	2 & 4	2 & 4	
CUTOFF (f_c) or CENTER (f_o) FREQUENCY	0.001 Hz to 1.0 Hz	1 Hz to 20 KHz	1 Hz to 20 KHz
Factory Preset)			
Tolerance of f_c or f_o	±2%	±2%	±1%
Stability, Avg. vs. temp (0 to 70°) max.	±0.05%/°C	±0.05%/°C	±0.05%/°C
PASS BAND GAIN, nom. (Non-Inv.)	0 dB	0 dB	0 dB
Tolerance @ DC (Low Pass, Band Reject)	±0.02 dB	±0.02 db	±0.02 db
@ 5 f_o (High Pass, Band Reject)[1]	±0.02 dB	±0.02 db	±0.02 db
@ f_o (Band Pass)			±0.2 db
SELECTIVITY (Q)			See Note 2
NOTCH REJECTION (Band Reject), min			−40 db
ACTIVE CHARACTERISTICS			
INPUT			
Input Impedance, min	1 MΩ	30 kΩ	1 MΩ
Input Voltage Range, min	±10V	same	same
Input Bias Current, max	10 pA	30 nA	30 nA
OUTPUT (Short Circuit Protected)			
Rated Output	±10V @ ±2mA	same	same
Full Power Response, min[3]	50 kHz	50 kHz	50 kHz
Output Resistance, max	10 Ω	10 Ω	10 Ω
Offset Voltage, initial (Adj. to Zero) typ	± 5 mV	± 5 mV	± 5 mV
max	±15 mV	±15 mV	±15 mV
vs. Temp., 0 to 70°C, max 2 pole	± 4 mV	± 3 mV	±10 mV
max 4 pole	± 7 mV	± 4 mV	±15 mV
POWER SUPPLY			
Voltage, rated specifications	±15 VDC	same	same
Voltage, derated specifications	±10 to ±18 VDC	same	same
Current, quiescent 2 pole	12 mA	4 mA	10 mA
4 pole	18 mA	8 mA	15 mA
CASE STYLE[4] 2 pole	R	L	L
4 pole	R	L (R < 10 Hz)	L (R < 10 Hz)
PRICE 2 pole/4 pole (1 - 9) > 10 Hz	ON	$ 34/54	$ 38/57
< 10 Hz	REQUEST	$ 38/59	$ 42/62

NOTES:
1. ±0.1 dB above f_c of 10 kHz for HIGH PASS AND BAND REJECT
2. Selectivity (Q) Options:
   BP 2 Pole Q = 10
   4 Pole Q = 5
   BR 2 Pole Q = 2
   Tolerance ±10%
3. Applicable to HIGH PASS AND BAND REJECT Models
4. Dimensions (L x W x H)
   L Case 2.02" x 1.14" x .62"
   R Case 2.8" x 1.3" x .95"

VOLTAGE CONTROLLED FILTERS

SPECIFICATIONS

High Pass & Low Pass Butterworth Filters

Cutoff Frequency Range	Up to 50:1 f_{Cmin} to f_{Cmax} from 0.1 Hz to 20,000 Hz
Input Impedance	> 100 kΩ
Cutoff Control Voltage	0.1 to 5.0 volts, 10 kΩ (50:1 range Linear)
Voltage Output (max)	70% of ± Power Supply Voltage
Minimum Load Impedance	2 kΩ for full output voltage swing
Gain	0 dB LP, 20 dB HP
Asymptotic Rolloff Slopes	4-pole — 24 dB/octave
Accuracy of f_C	±5%
Linearity of f_C	2%
Stability of f_C	0.1%/°C (0.2%/°C, < 2 Hz
Control Response	See note below.
Max Input Signal	±25 volts without damage
Gain Set Accuracy	±0.5 dB
Output Noise (10kHz BW)	1 mV RMS (maximum)
Distortion	0.5% (maximum) for output signals ≦ ±.5 x Power Supply
Steady State DC Offset at Output	Typically, ±10 mV for low pass —35 mV for high pass
Instantaneous DC Offset at Output	±100 mV under worst case controller operation. See note below.
Power Supply Voltage	±9 to ±18 VDC
Size	¾" x 2.15" x 2.15" (0.1–5 Hz ¾" x 3.5" x 2.5")
Temperature Range	0°C to +50°C (standard)

PRICE in U.S.A. F.O.B. Factory, Brighton, Mass.

100 Lot — $100 to $200 per unit.
Single Unit — $275 (stock filter)

STOCK FILTERS

Immediate Delivery

MODEL	FREQUENC
High Pass	
24 BHP 0.1-5/20	0.1-5
24 BHP 1-50/20	1-50
24 BHP 10-500/20	10-500
24 BHP 100-5,000/20	100-5,000
24 BHP 1,000-20,000/20	1,000-20,0
Low Pass	
24 BLP 0.1-5/0	0.1-5
24 BLP 1-50/0	1-50
24 BLP 10-500/0	10-500
24 BLP 100-5,000/0	100-5,000
24 BLP 1,000-20,000/0	1,000-20,0

Other designs are available covering frequency ng from 0.01 Hz to 100 kHz in other configurations cl ing Band-Pass, Notch, Tchebyscheff, etc.

CUSTOM DESIGNED FILT R

Custom designs of active fixed filters with low no e a excellent phase and amplitude tracking specifi ti can be supplied.

Band pass and notch filter designs having indep d voltage controlled center frequencies and band d and featuring extremely steep skirts are also av ab Write for information.

ORDERING INFORMATIO

SPECIFY MODEL NUMBER per example below

24 — Slope (dB/octave)
BHP — Type (Butterworth High Pass)
10-500 — Cutoff Frequency Ra / In-band G

NOTE: For a complete discussion of VCF performanc le send for Application Note VCF-1.

Prices and specifications subject to change without notice

PHASE SHIFTER/METER

(Bulletin PSM-360A)

- 10 Hz to 1 MHz Phase Meter and Phase Shifter
- Shifts and Measures 0° to 360°
- Direct Reading in Degrees
- High Input Impedance and Input Sensitivity
- DC Output Proportional to the Phase Shift being Measured or Generated

Other instruments:
Decade Dividers and Tone Burst Generators

INSTRUMENT ENCLOSURE

(Bulletin ENC-1000)

- Two Interlocking Aluminum Extrusions
- Good-Looking Simplicity
- Rugged Construction: ⅛" Wall
- Versatile Built-in Mounting for Multiple Circuit Boards
- Include Rubber Feet, Tilt Bail, Rear Panel, Complete Hardware
- Optional Power Supplies
- 3½" x 8⅜" x 7½" HWD
- Single or Dual Rack Adapters Available
- Clear Chromate Finish
- Blue Finish on Cover (Optional)
- Compatible Power Supply Available

DIGITAL IC TESTER

(Bulletin ICT-516)

- A Logical and Simply Connected Program
- Prewired Patch Plugs
- Rapid Manual Testing
- Self-Contained — Can Test All Digital gi Functional Failures
- Input and Output Indicator Lights for ua Analysis
- Universal Input Connector — Accepts to Pins
